On May 18, 2016, the Ministry received a letter from Kwantlen, Katzie and Semiahmoo First Nations expressing concern with the Project's procurement strategy and requesting further dialogue with respect to business opportunities. The three Nations communicated their continued concern with respect to the procurement strategy in a June Project update meeting, whereby they indicated that a response to their May 18, 2016 letter was required prior to their continued engagement on the Project. In a June 23, 2016 letter, Kwantlen, Katzie and Semiahmoo reiterated their concern with the Project's procurement strategy and that the EA and procurement process was advancing prior to their concerns being addressed. The Ministry acknowledges the concerns expressed by the three Nations and will continue to work with Kwantlen, Katzie and Semiahmoo First Nations to address this and any other Project-related concerns.

Consultation on Aboriginal Consultation Report 2

Pursuant to the Section 11 Order, a draft version of Aboriginal Consultation Report 2 was shared with Kwantlen for review and comment.

Kwantlen provided comments on June 27, 2016. The letter clearly outlines Kwantlen First Nation's concern over the inclusion of First Nations with weak strength of claims to the Lower Fraser River in consultation for the Project. In addition, Kwantlen emphasized that some Nations have stronger strength of claim than others and feels that this should be considered in the development of a consultation plan and involvement of First Nations in work and procurement opportunities. Kwantlen also expressed concern with Ministry's response to date regarding their procurement-related concerns and emphasized their lack of confidence in the Project's procurement approach resulting in benefits to Aboriginal groups. Kwantlen reiterated their concern regarding cumulative effects of all development on the lower Fraser and the need for a regional study to address this matter, noting that Kwantlen considers these to have "brushed over and were barely acknowledged" in the table contained in Aboriginal Consultation Report 2. These concerns are included in the table accompanying this report.

Kwantlen will be provided with a final copy of Aboriginal Consultation Report 2 along with an explanation of how their input has been considered and any changes to the final report as a result of their feedback.

Concerns, Issues and Interests Raised by Kwantlen First Nation

Consultation efforts to date have sought to identify and address concerns and issues raised by Kwantlen during the Initial Consultation and pre-Application Phases. The Ministry requested Kwantlen's input on Appendix A: Key Issues and Concerns to both Aboriginal Consultation Reports to ensure that issues and concerns have been accurately and appropriately captured. Aboriginal Consultation Report 2's Appendix A has been revised to reflect input received to date and to include status and next steps. This table is also included in Part C as Appendix F2.

As noted in the above section, Kwantlen has expressed significant concern with the Project's procurement strategy. The Ministry is committing to working with Kwantlen to address this concern.

2.7 Summary of Consultation Activities with Lake Cowichan First Nation

The following section summarizes consultation undertaken with the Lake Cowichan First Nation (Lake Cowichan) during the Initial Consultation and the pre-Application Phases of the Project. This content reflects efforts taken to consult with Lake Cowichan and of the issues, concerns and interests raised to date.

Initial Consultation Phase

The Ministry initiated consultation with Lake Cowichan in early 2014. In support of consultation during the Initial Consultation Phase the following Ministry-led activities have been undertaken with Lake Cowichan:

- Meetings with Lake Cowichan First Nation Chief and Council, staff and consultants;
- Sharing of Project-related materials;
- Sharing of draft documents for review and comment;
- Provision of capacity funding to support participation in consultation activities, review of documents, and submission of a Lake Cowichan Project-related Study.

During initial discussions with Lake Cowichan, and as demonstrated in the Consultation Plan and Lake Cowichan/George Massey Tunnel Replacement Project Funding Agreement, the Ministry sought input in the development of a consultation approach, and later a Consultation Plan, specific to Lake Cowichan.

Consultation activities during this period were focused on, among other things, the Project scope and schedule, proposed Studies/Valued Components, and identification of potential impacts on Lake Cowichan's Aboriginal Interests and mitigation measures that may be used to avoid or minimize any effects.

These discussions were supported by presentations and where possible, involved the Project's subject matter experts. The Ministry offered to present on any topic of interest to Lake Cowichan during this phase including any of the presentations from the May 2015 Environmental Update package (contents detailed in list of materials).

During the Initial Consultation Phase, the Ministry sought Lake Cowichan's input on the following EA-related documents:

- Project Description and Key Areas of Study
- Draft Archaeological Overview Assessment
- Draft Archaeological Heritage Resources Assessment
- Draft Aboriginal Consultation Plan
- Draft Application Information Requirements

With the exception of the Draft Consultation Plan, the Ministry met with Lake Cowichan and walked through the draft documents, in an effort to explain the scope and content, to respond to any initial questions and to elicit input.

While early drafts of these documents such as the Project Description and Key Areas of Study and the draft Application Information Requirements were shared during the Initial

Consultation Phase, they were provided again in their revised format for further review in the pre-Application Phase.

Meetings with Lake Cowichan First Nation

Between early 2014 and May 2016, the Ministry and the Lake Cowichan discussed and exchanged Project-related information through emails, phone calls, and meetings. Meetings and related activities undertaken with Lake Cowichan in relation to the Project are outlined below. It is to be noted that Lyackson and Lake Cowichan have been working together on this Project and as such, meetings have been recorded to reflect this relationship.

At meetings with Lake Cowichan during Initial Consultation, the Ministry provided introductory information regarding the proposed Project scope and Project schedule, and sought input with respect to Lake Cowichan’s past, current and future desired use of the Project area for the exercise of identified Aboriginal Interests, and any concerns related to potential impacts on Lake Cowichan’s Aboriginal Interests. The Ministry also sought to determine Lake Cowichan’s preferences with respect to participation in Project consultation, EA review, and related activities. During the initial meetings, communications protocols were established and key contacts were identified and/or confirmed.

In coordinating and conducting meetings with Lake Cowichan, wherever possible, the Ministry has ensured the following:

- Meetings were held at the preferred location and in the preferred format for Lake Cowichan.
- Meetings were scheduled at a date and time convenient for Lake Cowichan and that facilitated the attendance of key representatives.
- Input into the agenda was considered in the planning of the meeting and, where input had not been provided beforehand, the agenda made provisions for additional topics to be discussed.
- Technical and knowledgeable Ministry representatives have been present.
- Materials have been shared beforehand and are provided in a preferred format.
- Meetings have been respectful, productive and consistent with the principles and objectives of the Consultation Plan.

In addition to meetings with Lake Cowichan representatives during the Initial Consultation Phase, Lake Cowichan was invited to participate in a site visit which

focused on key Project components, mutual sharing of information, plans for Tunnel decommissioning, Deas Slough and Deas Island, as well as anticipated works and enhancement opportunities for Green Slough.

As outlined in the Project's Consultation Plan, the Ministry has been committed to sharing Project-related information with Lake Cowichan as it becomes available. The Ministry considered the provision of early drafts of key EA documents to Lake Cowichan as an opportunity to:

- Acknowledge and respond, in part, to known concerns regarding the high volume of project referrals, challenging timelines for review and limited resources to allocate to EA review processes;
- Meet the objective of sharing Project-related documents in a timely manner with the intent to facilitate Lake Cowichan First Nation's review and comment;
- Consider and incorporate input, address concerns and identify gaps in relation to key aspects of the Project (e.g. Valued Components, studies and study area boundaries) prior to the pre-Application Phase; and to
- Allow time for meetings to be coordinated and conducted regarding particular documents or aspect of the Project of interest to Lake Cowichan in advance of the pre-Application Phase.

During the Initial Consultation Phase, the Ministry communicated with Lake Cowichan through letters, email and phone calls.

Letters sent to Lake Cowichan during this consultation Phase include:

- Introductory letter notifying Lake Cowichan First Nation of the Project and offering to meet regarding the proposed Project;
- Project Description letter accompanying a draft copy of the Project Description and Areas of Study document requesting review and comment; and
- Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment letter requesting review and comment on the Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment (document also provided).

Email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Lake Cowichan representatives;
- Follow up to meetings or earlier communications;

- Provision of Project-related documents, updates and sharing of information;
- Response to concerns or questions in relation to the Project;
- Clarification of information and feedback shared by Lake Cowichan; and
- To address and resolve Project-related concerns.

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Lake Cowichan;
- Confirmation of information and follow up to previous communications;
- Updates and sharing of information; and
- To address and resolve Project-related concerns.

Project-related documents and materials used during consultation are listed in Aboriginal Consultation Report 1.

Aboriginal Consultation Plan – Lake Cowichan review and comment

From the beginning of consultation, the Ministry worked with Lake Cowichan to develop a mutually acceptable consultation approach, including the manner in which Lake Cowichan was to be kept informed about the Project, and the means by which comments (e.g., on the Project, its potential effects and the mitigation measures that may be used to avoid or minimize those effects) were to be communicated and addressed by the Ministry.

The Ministry's Draft Aboriginal Consultation Plan was informed by regulatory and legal requirements, the importance of enhancing or maintaining a positive, respectful and productive working relationship with Lake Cowichan, an established working relationship with Lake Cowichan, and specific input received during initial GMT consultation meetings with Lake Cowichan. The Draft Consultation Plan listed consultation activities, agreed to by both parties, and specified under the Lake Cowichan/GMT capacity funding agreement.

The Ministry undertook the activities below in order to obtain and, where appropriate, incorporate, input on the Draft Aboriginal Consultation Plan:

- Email request for review and comment with the Draft Consultation Plan provided as an attachment.
- Follow up communications (email and phone calls) to schedule a meeting to discuss the Draft Consultation Plan.
 - Discuss or obtain clarification on any comments provided by Lake Cowichan

to the Ministry.

- Revision of Draft Consultation Plan
- Sharing of Revised Consultation Plan and a summary of responses to Lake Cowichan's comments/input.
 - Revised Consultation Plan and, for ease of reference, original Draft Consultation Plan provided via email
 - Summary of comments/input provided by Lake Cowichan and corresponding action taken by the Ministry (i.e. revision to plan, comment "noted", request for further discussion regarding request)

In consideration of the confidential nature of comments provided on the draft Plan and that specific consultation activities were planned for each Aboriginal Group, the Ministry responded directly to each group regarding their respective comments on the Plan. Where Aboriginal Groups comments or requests did not result in changes to the Plan, a response was provided, along with an offer to meet to discuss any outstanding concerns or questions. Based on feedback received to date and discussions with Lake Cowichan on this matter, the Ministry is of the understanding that Lake Cowichan has no outstanding concerns or comments with respect to the Plan.

Lake Cowichan did not comment on the Draft Consultation Plan and indicated that they had no concerns with the document. The Consultation Plan was revised, based on input received from Aboriginal Groups, and approved by EAO on April 6, 2016.

Capacity Funding

During Initial Consultation meetings, Lake Cowichan identified the need for capacity funding to support Lake Cowichan's involvement in Project consultation activities, review of EA-related documents and participation in the pre-Application phase of the EA process. Lake Cowichan also identified the need for funding for a Lake Cowichan First Nation Traditional Use Study. The Ministry and Lake Cowichan worked together to finalize a funding agreement. The agreement specifies the activities covered under the agreement and Project/EA-related documents for Lake Cowichan's review and comment. Lake Cowichan submitted a Study entitled *Ts'uubaasatx Interest: George Massey Tunnel*.

Involvement in Archaeological Component of the Project

From the outset of discussions, Lake Cowichan identified the importance of the archaeological component of the Project and of their involvement in fieldwork and review of draft archaeological documents. All draft archaeological documents were shared with Lake Cowichan for review and comment. The Ministry and its archaeologist met with Lake Cowichan to present on this aspect of the Project. Lake Cowichan was invited to

participate in all archaeological fieldwork for the Project.

Pre-Application Consultation

The following section outlines consultation activities that the Ministry has undertaken with Lake Cowichan during the pre-Application Phase. The approach was developed with input from Lake Cowichan during the Initial Consultation Phase described above and EAO, and is outlined in the Consultation Plan. It is also informed by EAO's Section 11 Order, specifically Part G section 13 and 14, which outlines consultation requirements for the Ministry.

During the pre-Application phase consultation with Lake Cowichan, the Ministry has:

- Provided capacity funding to support continued involvement in Project consultation activities and the regulatory process;
- Provided all relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Lake Cowichan's Aboriginal Interests;
- Identified and provided, where possible, opportunities for Lake Cowichan to participate in fieldwork (River otter study);
- Identified and documented questions, issues and interests raised by Lake Cowichan;
- Continued to work with Aboriginal Groups to identify potentially affected Aboriginal Interests;
- Identified measures to avoid, mitigate, or where required accommodate, potential adverse effects on Aboriginal Interests as appropriate; and
- Supported EAO-led Technical Working Group.

Funding for Application Review

The Ministry will work with Lake Cowichan with respect to the provision of capacity funding for the Application Review Phase, with the aim of providing reasonable capacity support for participation in the review of the EA and any related permitting processes. Funding is intended to facilitate participation in technical reviews and analyses, for involvement in ongoing consultation activities (as specified in the Consultation Plan), and to support Lake Cowichan in presenting information regarding their respective Aboriginal Interests. Funding is also provided to ensure the consultation requirements pursuant to the Section 11 Order are met and the Consultation Plan is implemented as intended.

The Ministry will work with Lake Cowichan in an effort to finalize a funding agreement for the Application Review phase.

Consultation on EA-related documents

During this phase, the Ministry consulted Lake Cowichan on the following Project-related documents:

- Draft Project Description and Key Areas of Study (Project Description);
- Draft Application Information Requirements;
- Content of draft Part C of the Environmental Assessment Application
- Draft Consultation Report 1

Draft Consultation Report 2 was also provided to Lake Cowichan for review and comment. Where appropriate, revisions to Consultation Report 2 will reflect comments received from Lake Cowichan and other Aboriginal Groups.

Consultation on Aboriginal Consultation Report 1

The Ministry provided draft Consultation Report 1 to Lake Cowichan for review and comment prior to finalization and submission to EAO, indicating that feedback received by May 2, 2106, would be incorporated into the final version as appropriate. Lake Cowichan First Nation did not request changes to the draft document.

Participation in fieldwork

In April 2016, Lake Cowichan was invited to participate in river otter-related fieldwork. The objectives of this work were to document river otter relative abundance within the Regional Assessment Area, document and describe use of riparian areas, identify high use areas, and potential areas and options for mitigation. Lake Cowichan did not participate in this fieldwork.

Materials shared with Lake Cowichan during the pre-Application Phase are outlined below:

| Document | Description |
|---|---|
| Project Description and Key Areas of Study (Project Description) | Document prepared according to guidance provided in EAO's <i>Guidelines for Preparing a Project Description for an Environmental Assessment in British Columbia</i> (EAO 2013). |
| Draft Application Information Requirements | The Working Group review of the draft Application Information Requirements (dAIR) commenced on January 6, 2016 . The dAIR outlines the studies, methods and information required for the Application for an Environmental Assessment Certificate. |
| Draft Application Information Requirements Presentation (December 2015) | Discussion of how comments received on first draft Application Information Requirements document were integrated into the next revised version. |
| Application Information Requirements | Final version of the document was issued on May 24, 2016. |
| Aboriginal Consultation Plan (April 2016) | Final version of Aboriginal Consultation Plan that incorporated input received from Aboriginal Groups and EAO. |
| Draft Part C content | Draft components of Part C for review and comment by Schedule B Aboriginal groups: baseline summaries and mapping. |
| Aboriginal Consultation Report 1 | Draft summary of general consultation undertaken to date on the Project. For review and comment. |
| Aboriginal Consultation Report 2 | Draft report with Aboriginal Group-specific information on consultation undertaken to date on the Project. For review and comment. |

Meetings with Lake Cowichan First Nation

During the pre-Application Phase, the Ministry met three times with Lake Cowichan representatives (see list of meetings for details). Lake Cowichan was invited to participate in the EAO-led Working Group. The EAO-led Working Group meetings focused on the following:

- Working Group Meeting (January 21, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process

- Project overview and update
- Key Areas of Study
- dAIR Overview
- Preliminary conclusions from study results to date
- Working Group Meeting (March 10, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - List of materials available on Project website
 - Review of comments received on dAIR and resulting changes to the dAIR
 - Description and rationale of assessment areas

Communications Methods

During the pre-Application Phase, email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Lake Cowichan representatives
- Follow up to meetings or earlier communications
- Provision of Project-related documents, updates and sharing of information
- Response to concerns or questions in relation to the Project
- Clarification of information and feedback shared by Lake Cowichan
- To address and resolve Project-related concerns

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Lake Cowichan
- Confirmation of information and follow up to previous communications
- Updates and sharing of information
- To address and resolve Project-related concerns

Documents for review were shared via email, in letter format and via mail/courier. Letters sent to Lake Cowichan include:

- Letter requesting review of Draft Part C content
- Letter requesting review of Draft Aboriginal Consultation Report 1

- Letter requesting review of Draft Aboriginal Consultation Report 2

Lake Cowichan reviewed the draft Part C content but did not provide comments or request changes.

Consultation on Aboriginal Consultation Report 2

Pursuant to the Section 11 Order, a draft version of this report was shared with Lake Cowichan for review and comment. Lake Cowichan did not provide comments on Report 2 prior to submission of the Final Report to EAO. The Ministry continues to welcome feedback from Lake Cowichan and will respond to any input received.

Lake Cowichan will be provided with a final copy of the Consultation Report.

Concerns, Issues and Interests Raised by Lake Cowichan First Nation

Consultation efforts to date, have sought to identify and address concerns and issues raised by Lake Cowichan during the Initial Consultation and pre-Application Phases. The Ministry has requested Lake Cowichan's input on a table accompanying both Aboriginal Consultation Reports to ensure that issues and concerns have been accurately and appropriately captured. Lake Cowichan's concerns, issues and interests are outlined in Appendix A and reflect any input received to date.

The Ministry requested Lake Cowichan's input on Appendix A: Key Issues and Concerns to both Aboriginal Consultation Reports to ensure that issues and concerns have been accurately and appropriately captured. Aboriginal Consultation Report 2's Appendix A has been revised to reflect input received to date and to include status and next steps. This table is also included in Part C as Appendix F2

2.8 Summary of Consultation Activities with Lyackson First Nation

The following section summarizes consultation undertaken with the Lyackson First Nation (Lyackson) during the Initial Consultation and the pre-Application Phases of the Project. This content reflects efforts taken to consult with Lyackson and of the issues, concerns and interests raised to date. The Ministry considered Lyackson's input on the draft of this Consultation Report and revised content where appropriate, and will share a final version of the Consultation Report with Lyackson.

Initial Consultation Phase

The Ministry initiated consultation with Lyackson in early 2014. In support of consultation during the Initial Consultation Phase the following Ministry-led activities have been undertaken with Lyackson:

- Meetings with Lyackson staff and consultants;

- Site visit;
- Sharing of Project-related materials;
- Sharing of draft documents for review and comment; and
- Provision of capacity funding to support participation in consultation activities, review of documents, and submission of a Lyackson Study.

During initial discussions with Lyackson, and as demonstrated in the Consultation Plan and Lyackson/George Massey Tunnel Replacement Project Funding Agreement, the Ministry sought input in the development of a consultation approach, and later a Consultation Plan, specific to Lyackson.

Consultation activities during this period were focused on, among other things, the Project scope and schedule, proposed Studies/Valued Components, and identification of potential impacts on Lyackson's Aboriginal Interests and mitigation measures that may be used to avoid or minimize any effects.

These discussions were supported by presentations and where possible, involved the Project's subject matter experts. The Ministry offered to present on any topic of interest to Lyackson during this phase including any of the presentations from the May 2015 Environmental Update package (contents detailed in list of materials).

During the Initial Consultation Phase, the Ministry sought Lyackson's input on the following EA-related documents:

- Project Description and Key Areas of Study
- Draft Archaeological Overview Assessment
- Draft Archaeological Heritage Resources Assessment
- Draft Aboriginal Consultation Plan
- Draft Application Information Requirements

With the exception of the Draft Consultation Plan, the Ministry met with Lyackson and walked through the draft documents, in an effort to explain the scope and content, to respond to any initial questions and to elicit input.

While early drafts of these documents such as the Project Description and Key Areas of Study and the draft Application Information Requirements were shared during the Initial Consultation Phase, they were provided again in their revised format for further review in the pre-Application Phase.

Meetings with Lyackson First Nation

Between early 2014 and May 2016, the Ministry and the Lyackson discussed and exchanged Project-related information through emails, phone calls, and in-person meetings. Meetings and related activities undertaken with Lyackson in relation to the Project are outlined below.

At meetings with Lyackson during Initial Consultation, the Ministry provided introductory information regarding the proposed Project scope and Project schedule, and sought input with respect to Lyackson’s past, current and desired future use of the Project area for the exercise of identified Aboriginal Interests, and any concerns related to potential impacts on Lyackson’s Aboriginal Interests. The Ministry also sought to determine Lyackson’s preferences with respect to participation in Project consultation, EA review, and related activities.

During the initial meetings, communications protocols were established and key contacts were identified and/or confirmed. It is to be noted that Lyackson and Lake Cowichan have been working together on this Project and as such, meetings have been recorded to reflect this relationship.

In coordinating and conducting meetings with Lyackson, wherever possible, the Ministry has ensured the following:

- Meetings were held at the preferred location and in the preferred format for Lyackson.
- Meetings were scheduled at a date and time convenient for Lyackson and that facilitated the attendance of key representatives.
- Input into the agenda was considered in the planning of the meeting and, where input had not been provided beforehand, the agenda made provisions for additional topics to be discussed.
- Technical and knowledgeable Ministry representatives have been present.
- Materials have been shared beforehand and are provided in a preferred format.
- Meetings have been respectful, productive and consistent with the principles and objectives of the Consultation Plan.

During this period, key topics and presentations covered during meetings with Lyackson include: Archaeology/Heritage Resources, Wildlife, Marine Use, Fish and Fish Habitat, Traffic, Human Health (air and noise), River Hydraulics and Morphology, Utilities, Green Slough concept, Project Description and Key Areas of Study document, Project Definition Report and the Draft Application Information Requirements.

ABORIGINAL CONSULTATION REPORT
George Massey Tunnel Replacement Project

| Date | Consultation Phase | Attendees | Meeting Location | Materials Presented |
|------|--------------------|-----------|------------------|--|
| | | | | Lake Cowichan issues and concerns <ul style="list-style-type: none"> • Review of draft Part C content |

In addition to meetings with Lyackson representatives during the Initial Consultation Phase, Lyackson participated in a site visit which focused on key Project components, mutual sharing of information, plans for Tunnel decommissioning, the Deas Slough Bridge, and Deas Island, as well as anticipated works and enhancement opportunities for Green Slough.

As outlined in the Project’s Consultation Plan, the Ministry has been committed to sharing Project-related information with Lyackson as it becomes available. The Ministry considered the provision of early drafts of key EA documents to Lyackson as an opportunity to:

- Acknowledge and respond, in part, to known concerns regarding the high volume of project referrals, challenging timelines for review and limited resources to allocate to EA review processes;
- Meet the objective of sharing Project-related documents in a timely manner with the intent to facilitate Lyackson’s review and comment;
- Consider and incorporate input, address concerns and identify gaps in relation to key aspects of the Project (e.g. Valued Components, studies and study area boundaries) prior to the pre-Application Phase; and to
- Allow time for meetings to be coordinated and conducted regarding particular documents or aspect of the Project of interest to Lyackson in advance of the pre-Application Phase.

During the Initial Consultation Phase, the Ministry communicated with Lyackson through letters, email and phone calls.

Letters sent to Lyackson during this consultation Phase include:

- Introductory letter notifying Lyackson of the Project and offering to meet regarding the proposed Project;
- Project Description letter accompanying a draft copy of the Project Description and Areas of Study document requesting review and comment; and
- Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment letter requesting review and comment on the Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment

(document also provided).

Email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Lyackson representatives;
- Follow up to meetings or earlier communications;
- Provision of Project-related documents, updates and sharing of information;
- Response to concerns or questions in relation to the Project;
- Clarification of information and feedback shared by Lyackson; and
- To address and resolve Project-related concerns.

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Lyackson;
- Confirmation of information and follow up to previous communications;
- Updates and sharing of information; and
- To address and resolve Project-related concerns.

Project-related documents and materials used during consultation are listed in Aboriginal Consultation Report 1.

Aboriginal Consultation Plan – Lyackson Review and Comment

From the beginning of consultation, the Ministry worked with Lyackson to develop a mutually acceptable consultation approach, including the manner in which Lyackson was to be kept informed about the Project, and the means by which comments (e.g., on the Project, its potential effects and the mitigation measures that may be used to avoid or minimize those effects) were to be communicated and addressed by the Ministry.

The Ministry's Draft Aboriginal Consultation Plan was informed by regulatory and legal requirements, the importance of enhancing or maintaining a positive, respectful and productive working relationship with Lyackson, an established working relationship with Lyackson, and specific input received during initial GMT consultation meetings with Lyackson. The Draft Consultation Plan listed consultation activities, agreed to by both parties, and specified under the Lyackson/GMT capacity funding agreement.

The Ministry undertook the activities below in order to obtain and, where appropriate, incorporate, input on the Draft Aboriginal Consultation Plan:

- Email request for review and comment with the Draft Consultation Plan provided as an attachment.
- Follow up communications (email and phone calls) to schedule a meeting to discuss the Draft Consultation Plan.
 - Discuss or obtain clarification on any comments provided by Lyackson to the Ministry.
- Revision of Draft Consultation Plan
- Sharing of Revised Consultation Plan and a summary of responses to Lyackson's comments/input.
 - Revised Consultation Plan and, for ease of reference, original Draft Consultation Plan provided via email
 - Summary of comments/input provided by Lyackson and corresponding action taken by the Ministry (i.e. revision to plan, comment "noted", request for further discussion regarding request)

In consideration of the confidential nature of comments provided on the draft Plan and that specific consultation activities were planned for each Aboriginal Group, the Ministry responded directly to each group regarding their respective comments on the Plan. Where Aboriginal Groups comments or requests did not result in changes to the Plan, a response was provided, along with an offer to meet to discuss any outstanding concerns or questions. Based on feedback received to date and discussions with Lyackson on this matter, the Ministry is of the understanding that Lyackson has no outstanding concerns or comments with respect to the Plan. The Consultation Plan was revised, based on input received from Aboriginal Groups, and approved by EAO on April 6, 2016.

Capacity Funding

During Initial Consultation meetings, Lyackson identified the need for capacity funding to support Lyackson's involvement in Project consultation activities, review of EA-related documents and participation in the pre-Application phase of the EA process. Lyackson also identified the need for funding for a Lyackson First Nation Traditional Use Study. The Ministry and Lyackson worked together to finalize a funding agreement. The agreement specifies the activities covered under the agreement and Project/EA-related documents for Lyackson's review and comment. Lyackson submitted a Study entitled, Preliminary Lyackson Use and Occupancy Mapping Study for BC MOTI's George Massey Tunnel Replacement Project.

Involvement in Archaeological Component of the Project

From the outset of discussions, Lyackson identified the importance of the archaeological component of the Project and of their involvement in fieldwork and review of draft archaeological documents. All draft archaeological documents were shared with Lyackson for review and comment. The Ministry and its archaeologist met with Lyackson to present on this aspect of the Project. Lyackson was invited to participate in all archaeological fieldwork for the Project.

Pre-Application Consultation

The following section outlines consultation activities that the Ministry has undertaken with Lyackson during the pre-Application Phase. The approach was developed with input from Lyackson during the Initial Consultation Phase described above and EAO, and is outlined in the Consultation Plan. It is also informed by EAO's Section 11 Order, specifically Part G section 13 and 14, which outlines consultation requirements for the Ministry.

As it pertains to consultation with Lyackson, during the pre-Application phase, the Ministry has:

- Provided capacity funding to support continued involvement in Project consultation activities and the regulatory process;
- Provided all relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Lyackson's Aboriginal Interests;
- Identified and provided, where possible, opportunities for Lyackson to participate in fieldwork (River otter study);
- Identified and documented questions, issues and interests raised by Lyackson;
- Continued to work with Lyackson to identify potentially affected Aboriginal Interests;
- Identified measures to avoid, mitigate, or where required accommodate, potential adverse effects on Aboriginal Interests as appropriate; and
- Supported EAO-led Technical Working Group.

Funding for Application Review

The Ministry will work with Lyackson with respect to the provision of capacity funding for the Application Review Phase, with the aim of providing reasonable capacity support for participation in the review of the EA and any related permitting processes. Funding is intended to facilitate participation in technical reviews and analyses, for involvement in ongoing consultation activities (as specified in the Consultation Plan), and to support

Lyackson in presenting information regarding their respective Aboriginal Interests. Funding is also provided to ensure the consultation requirements pursuant to the Section 11 Order are met and the Consultation Plan is implemented as intended. The Ministry will work with Lyackson in an effort to finalize a funding agreement for the Application Review phase.

Consultation on EA-related documents

During this phase, the Ministry consulted Lyackson on the following Project-related documents:

- Draft Project Description and Key Areas of Study (Project Description);
- Draft Application Information Requirements;
- Draft Content of Part C of the Environmental Assessment Application; and
- Draft Consultation Report 1
- Draft Consultation Report 2

Lyackson commented on the dAIR through the Working Group and provided comments on the draft content of Part C during an April 27, 2016 meeting with the Ministry. Changes to Part C were made based on Lyackson's input.

Consultation on Aboriginal Consultation Report 1

The Ministry provided draft Consultation Report 1 to Lyackson for review and comment prior to finalization and submission to EAO indicating that feedback received by May 2, 2106, would be incorporated into the final version as appropriate. Lyackson met with the Ministry on April 27, 2016 to review the Consultation Report and confirmed that there were no comments on the Report.

Participation in fieldwork

In April 2016, Lyackson was invited to participate in river otter-related fieldwork. The objectives of this work were to document river otter relative abundance within the Regional Assessment Area, document and describe use of riparian areas, identify high use areas, and potential areas and options for mitigation. Lyackson did not participate in the fieldwork.

Lyackson Elders Site Visit

At the request of Lyackson, the Ministry undertook a site visit with Lyackson elders. The site visit covered key Project components, provided an opportunity for mutual sharing of information and knowledge, and allowed for Lyackson representatives to ask questions about the Project.

Materials shared with Lyackson during the pre-Application Phase are outlined below:

| Document | Description |
|---|---|
| Project Description and Key Areas of Study (Project Description) | Document prepared according to guidance provided in EAO's <i>Guidelines for Preparing a Project Description for an Environmental Assessment in British Columbia</i> (EAO 2013). |
| Draft Application Information Requirements | The Working Group review of the draft Application Information Requirements (dAIR) commenced on January 6, 2016 . The dAIR outlines the studies, methods and information required for the Application for an Environmental Assessment Certificate. |
| Draft Application Information Requirements Presentation (December 2015) | Discussion of how comments received on first draft Application Information Requirements document were integrated into the next revised version. |
| Application Information Requirements | Final version of the document was issued on May 24, 2016. |
| Aboriginal Consultation Plan (April 2016) | Final version of Aboriginal Consultation Plan that incorporated input received from Aboriginal Groups and EAO. |
| Draft Part C content | Draft components of Part C for review and comment by Schedule B Aboriginal groups: baseline summaries and mapping. |
| Aboriginal Consultation Report 1 | Draft summary of general consultation undertaken to date on the Project. For review and comment. |
| Aboriginal Consultation Report 2 | Draft report with Aboriginal Group-specific information on consultation undertaken to date on the Project. For review and comment. |

Meetings

During the pre-Application Phase, the Ministry met three times with Lyackson (see list of meetings for details). Lyackson First Nation has participated in two EAO-led Working Group meetings. The EAO-led Working Group meetings focused on the following:

- Working Group Meeting (January 21, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - Project overview and update
 - Key Areas of Study

- dAIR Overview
- Preliminary conclusions from study results to date
- Working Group Meeting (March 10, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - List of materials available on Project website
 - Review of comments received on dAIR and resulting changes to the dAIR
 - Description and rationale of assessment areas

Communications Methods

During the pre-Application Phase, email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Lyackson representatives
- Follow up to meetings or earlier communications
- Provision of Project-related documents, updates and sharing of information
- Response to concerns or questions in relation to the Project
- Clarification of information and feedback shared by Lyackson
- To address and resolve Project-related concerns

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Lyackson
- Confirmation of information and follow up to previous communications
- Updates and sharing of information
- To address and resolve Project-related concerns

Documents for review were shared via email, in letter format and via mail/courier. These documents include:

- Letter requesting review of Draft Part C content
- Letter requesting review of Draft Aboriginal Consultation Report 1
- Letter requesting review of Draft Aboriginal Consultation Report 2

Consultation on Aboriginal Consultation Report 2

Pursuant to the Section 11 Order, a draft version of Aboriginal Consultation Report 2 was shared with Lyackson for review and comment..

Lyackson will be provided with a final copy of Consultation Report 2 along with an explanation of how their input has been considered and any changes to the final Consultation Report 2 as a result of their feedback.

On June 22, 2016, Lyackson provided the following comments on Consultation Report 2. Schedule A: Key Issues and Concerns has been modified to reflect this input.

- Lyackson is keenly interested in employment, training, contracting and economic opportunities related to Lyackson as mentioned in the report.
- Lyackson is concerned by the statement on Cumulative Effects "there is no EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests." Lyackson feels strongly that in order to conduct a fulsome assessment, the EAO must consider the cumulative effects. (there may be both a moral and a legal obligation to do so)
- Lyackson is concerned about the section on Accidents and Malfunctions. This section appears to focus exclusively on the construction phase, Lyackson's concerns are with the construction, operational and deconstruction - the full cycle of the project.
- Lyackson feels strongly that Saltwater wedge and marshes should be allowed to naturally occur, the marshes are critical habitat for fish for protection from predators, rest, and clear water to breathe. More sediment added to an already high sediment area makes this even more important.
- Lyackson objects to the additional burden of being charged Tolls, as it is inappropriate to put an added barrier on Lyackson to access their own village site, most already have the BC Ferries toll to get to the area.
- In addition, Lyackson did mention that there would be concerns regarding light pollution and how that would affect owls.

Concerns, Issues and Interests Raised by Lyackson First Nation

Consultation efforts to date, have sought to identify and address concerns and issues raised by Lyackson during the Initial Consultation and pre-Application Phases. The Ministry requested Lyackson's input on Appendix A: Key Issues and Concerns to both Aboriginal Consultation Reports to ensure that issues and concerns have been accurately and appropriately captured. Aboriginal Consultation Report 2's Appendix A has been revised to reflect input received to date and to include status and next steps. This table is also included in Part C as Appendix H2.

2.9 Summary of Consultation Activities with Musqueam Indian Band

The following section summarizes consultation undertaken with the Musqueam Indian Band (Musqueam) during the Initial Consultation and the pre-Application Phases of the Project. This content reflects efforts taken to consult with Musqueam and of the issues, concerns and interests raised to date.

Initial Consultation Phase

The Ministry initiated consultation with Musqueam Indian Band in early 2013. The following Ministry-led activities were undertaken with Musqueam during the Initial Consultation Phase:

- Meetings with Musqueam Chief and Council, staff and consultants;
- Site visit;
- Sharing of Project-related materials;
- Sharing of draft documents for review and comment;
- Project booth at Musqueam Aboriginal Day event; and
- Provision of capacity funding to support Musqueam's participation in consultation activities, including review of draft EA documents and submission of a Musqueam Project-related Study.

During initial discussions with Musqueam, and as demonstrated in the Consultation Plan and the Musqueam/George Massey Tunnel Replacement Project Funding Agreement, the Ministry sought input in the development of a consultation approach, and later a Consultation Plan, specific to Musqueam.

In addition to meetings with Musqueam representatives during the Initial Consultation Phase, and at Musqueam's request, the Ministry conducted a Musqueam-only site visit by boat and land which focused on key Project components, mutual sharing of information, plans for Tunnel decommissioning, the Deas Slough Bridge and Deas Island, and anticipated works and enhancement opportunities for Green Slough.

At the request of Musqueam, representatives from the George Massey Tunnel Replacement Project had a booth at Musqueam's 2015 Aboriginal Day celebration. Community members and the general public were in attendance. The Ministry displayed Project materials and responded to questions from the public and from Musqueam community members.

In response to Musqueam's expressed interest in a community meeting/open house, the Ministry made multiple offers to conduct a community meeting/open house at Musqueam and will continue to seek Musqueam's input with respect to preferred consultation

activities during the Application Review Phase.

Consultation activities during this period were focused on the Project scope and schedule, proposed Studies/Valued Components, Musqueam's past, current and desired future use of the Project area, identification of potential impacts on Musqueam's Aboriginal Interests, and mitigation measures that may be used to avoid or minimize any adverse effects on those Interests.

Discussions were supported by presentations and where possible, involved the Project's subject matter experts. The Ministry offered to present on any topic of interest to Musqueam during this phase including any of the presentations from the May 2015 Environmental Update package (contents detailed in list of materials included in Aboriginal Consultation Report 1).

The Ministry sought Musqueam's input on the following EA-related documents:

- Project Description and Key Areas of Study
- Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment
- Draft Archaeological Heritage Resources Assessment
- Draft Aboriginal Consultation Plan
- Draft Application Information Requirements

With the exception of the Draft Aboriginal Consultation Plan, the Ministry met with Musqueam to discuss these documents to explain the scope and content, to respond to any initial questions and to elicit Musqueam's comments.

While early drafts of these documents such as the Project Description and Key Areas of Study and the draft Application Information Requirements were shared during the Initial Consultation Phase, they were provided again in their revised format for further review in the pre-Application Phase.

Meetings with Musqueam

Between early 2013 and May 2016, the Ministry and the Musqueam discussed and exchanged Project-related information through emails, phone calls, and meetings. Meetings with Musqueam in relation to the Project are outlined below.

At meetings with Musqueam during the Initial Consultation Phase, the Ministry provided introductory information regarding the proposed Project scope and Project schedule, and sought input with respect to Musqueam's past, current and desired future use of the Project area for the exercise of identified Aboriginal Interests, and any concerns related

to potential impacts on Musqueam’s Aboriginal Interests. The Ministry also sought to determine Musqueam’s preferences with respect to participation in Project consultation, EA review, and related activities. During the initial meetings, communications protocols were established and key contacts were identified and/or confirmed.

In coordinating and conducting meetings with Musqueam, wherever possible, the Ministry has ensured the following:

- Meetings were held at the preferred location and in the preferred format for Musqueam.
- Meetings were scheduled at a date and time convenient for Musqueam and that facilitated the attendance of key representatives.
- Input into the agenda was considered in the planning of the meeting and, where input had not been provided beforehand, the agenda made provisions for additional topics to be discussed.
- Technical and knowledgeable Ministry representatives have been present.
- Materials have been shared beforehand and are provided in a preferred format.
- Meetings have been respectful, productive and consistent with the principles and objectives of the Consultation Plan.

Meetings between the Ministry and Musqueam are outlined below.

As outlined in the Project's Consultation Plan, the Ministry has been committed to sharing Project-related information with Musqueam as it becomes available. The Ministry considered providing early drafts of key EA documents to Musqueam as an opportunity to:

- Acknowledge and respond, in part, to known concerns regarding the high volume of project referrals, challenging timelines for review and limited resources to allocate to EA review processes;
- Meet the objective of sharing Project-related documents in a timely manner with the intent to facilitate Musqueam's' review and comment;
- Consider and incorporate input, address concerns and identify gaps in relation to key aspects of the Project (e.g. Valued Components, studies and study area boundaries) prior to the pre-Application Phase; and to
- Allow time for meetings to be coordinated and conducted regarding particular documents or aspect of the Project of interest to Musqueam in advance of the pre-Application Phase.

While early drafts of these documents such as the Project Description and Key Areas of Study and the draft Application Information Requirements were shared during the Initial Consultation Phase, they were provided again in their revised format for further review in the pre-Application Phase.

During the Initial Consultation Phase, the Ministry communicated with Musqueam

through letters, email and phone calls.

Letters sent to Musqueam during this consultation Phase include:

- Introductory letter notifying Musqueam of the Project and offering to meet regarding the proposed Project;
- Project Description letter accompanying a draft copy of the Project Description and Areas of Study document requesting review and comment; and
- Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment letter requesting review and comment on the Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment (document also provided).

Email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Musqueam representatives;
- Follow up to meetings or earlier communications;
- Provision of Project-related documents, updates and sharing of information;
- Response to concerns or questions in relation to the Project;
- Clarification of information and feedback shared by Musqueam; and
- To address and resolve Project-related concerns.

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Musqueam;
- Confirmation of information and follow up to previous communications;
- Updates and sharing of information; and
- To address and resolve Project-related concerns.

Project-related documents and materials used during consultation are listed in Aboriginal Consultation Report 1.

Aboriginal Consultation Plan – Musqueam Review and Comment

From the beginning of consultation, the Ministry worked with Musqueam to develop a mutually acceptable consultation approach, including the manner in which Musqueam was to be kept informed about the Project, and the means by which comments (e.g., on the Project, its potential effects and the mitigation measures that may be used to avoid or minimize those effects) were to be communicated and addressed by the Ministry.

The Ministry's Consultation Plan is informed by regulatory and legal requirements, the objective of enhancing or maintaining a positive, respectful and productive working relationship with Musqueam, an established working relationship with Musqueam, and specific input received during early consultation meetings with Musqueam. The Consultation Plan outlines consultation activities, agreed to by both parties, and specified under the Musqueam/GMT capacity funding agreement.

The Ministry undertook the activities below in order to obtain and, where appropriate, incorporate, input on the Consultation Plan:

- Email request for review and comment on the draft Consultation Plan provided as an attachment.
- Follow up communications (email and phone calls) to schedule a meeting to discuss the draft Consultation Plan.
 - Discuss or obtain clarification on any comments provided by Musqueam to the Ministry.
- Revision of draft Consultation Plan
- Sharing of revised Consultation Plan and a summary of responses to Musqueam's comments/input.
 - Revised Consultation Plan and, for ease of reference, the original draft Consultation Plan provided via email
 - Summary of comments/input provided by Musqueam and corresponding action taken by the Ministry (i.e. revision to plan, comment "noted", request for further discussion regarding request)

Musqueam provided comments on the draft Consultation Plan via email on November 6, 2015. In consideration of the confidential nature of comments provided on the draft Consultation Plan and that specific consultation activities were planned for each Aboriginal Group, the Ministry responded directly to each group regarding their respective comments on the Aboriginal Consultation Plan. The Ministry provided a response to each Aboriginal Group with respect to all comments and requests, including those for which changes to the Consultation Plan were not undertaken. In addition, the Ministry offered to meet to discuss any outstanding concerns or questions. Musqueam has not responded to the Ministry's email (March 9, 2016) outlining changes to the Consultation Plan resulting from Musqueam's input and an offer to meet to discuss the Consultation Plan.

The Ministry is committed to working with Musqueam to determine how changes to the Application Review consultation activities outlined in the Consultation Plan may be revised to support effective and meaningful consultation with Musqueam.

Capacity Funding

During Initial Consultation meetings, Musqueam identified the need for capacity funding to support Musqueam's involvement in Project consultation activities, review of draft EA-related documents and participation in the pre-Application Phase of the EA Process. Musqueam also identified the need for funding for a Musqueam Traditional Use Study. The Ministry and Musqueam worked together to finalize a funding agreement. The agreement specifies the activities covered under the agreement and Project/EA-related documents for Musqueam's review and comment. On November 17, 2015, Musqueam submitted a Project-related study, "Salmon So Thick, That You Could Walk on Water: Preliminary Scope of Musqueam Components for the Environmental Impact Assessment of the Proposed George Massey Tunnel Replacement Project".

Involvement in Archaeological Component of the Project

From the outset of discussions, Musqueam identified the importance of the archaeological component of the Project and of Musqueam's involvement in fieldwork and review of draft archaeological documents. All draft archaeological documents were shared with Musqueam for review and comment, and the Ministry, and its archaeologist met with Musqueam to present on this aspect of the Project. Musqueam participated in archaeological fieldwork for the Project and, at Musqueam's request, a Musqueam Heritage Permit was obtained in advance of archaeological work being undertaken.

Pre-Application Consultation

The following section outlines consultation activities that the Ministry has undertaken with Musqueam during the pre-Application Phase. The approach was developed with input from Musqueam during the Initial Consultation Phase described above and in the Consultation Plan. It is also informed by EAO's Section 11 Order, specifically Part G section 13 and 14, which outlines Aboriginal consultation requirements for the Ministry.

During the pre-Application Phase consultation with Musqueam, the Ministry has:

- Provided capacity funding to support continued involvement in Project consultation activities and the regulatory process;
- Provided all relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Musqueam's Aboriginal Interests;
- Identified and provided, where possible, opportunities for Musqueam to participate in fieldwork (River otter study);
- Identified and documented questions, issues and interests raised by Musqueam;
- Continued to work with Musqueam to seek to identify potentially affected

Aboriginal Interests;

- Identified measures to avoid, mitigate, or where required accommodate, potential adverse effects on Aboriginal Interests as appropriate; and
- Supported EAO-led Technical Working Group.

Funding for Application Review

The Ministry will work with Musqueam with respect to capacity funding for the Application Review Phase, with the aim of providing reasonable support for participation in the review of the EA and any related permitting processes. Funding is intended to facilitate participation in technical reviews and analyses, and involvement in ongoing consultation activities (as specified in the Consultation Plan). It is also intended to support Musqueam in presenting information regarding their respective Aboriginal Interests, to ensure the consultation requirements pursuant to the Section 11 Order are met and that the Consultation Plan is implemented as intended. The Ministry has committed to providing funding for the Application Review phase and will work with Musqueam in this regard. Musqueam has requested that the Ministry address funding-related concerns and needs in the context of a Memorandum of Understanding. The Ministry is committed to working with Musqueam in this regard.

Consultation on EA-related documents

During this phase, Musqueam was consulted on the following Project-related documents:

- Project Description and Key Areas of Study document
- Draft Application Information Requirements;
- Draft components of Part C of the Environmental Assessment Application
- Draft Consultation Report 1

Musqueam was also provided with Draft Consultation Report 2 for review and comment.

Consultation on Aboriginal Consultation Report 1

The Ministry provided draft Consultation Report 1 to Musqueam for review and comment prior to finalization and submission to EAO, indicating that feedback received by May 2, 2016, would be incorporated into the final version as appropriate. Musqueam requested an extension to provide comments on this draft document. Musqueam submitted comments on draft Consultation Report 1 related to content and format, and requested that a separate Musqueam-specific report be prepared that is reflective of Musqueam's perspective on consultation undertaken to date. The Ministry expects that the Aboriginal Group-specific summaries in this Report will address Musqueam's concerns related to the format and content of Aboriginal Consultation Report 1. Among the comments made

by Musqueam on draft Consultation Report 1 was a request that funding be addressed through a negotiated Memorandum of Understanding (MoU) between Musqueam and the Ministry. The Ministry has committed to working with Musqueam with respect to a MoU and, per Musqueam’s request, will address funding-related concerns in the context of those discussions..

Participation in fieldwork

In April 2016, Musqueam was invited to participate in river otter-related fieldwork. The objectives of this work were to document river otter relative abundance within the Regional Assessment Area, document and describe use of riparian and high-use areas and identify potential locations and options for mitigation. This work was undertaken in response to Working Group comments raised by Musqueam in relation to the dAIR. Musqueam did not participate in this fieldwork opportunity.

Materials shared with Musqueam during the pre-Application Phase are outlined below:

| Document | Description |
|---|--|
| Project Description and Key Areas of Study (Project Description) | Document prepared according to guidance provided in EAO’s <i>Guidelines for Preparing a Project Description for an Environmental Assessment in British Columbia</i> (EAO 2013). |
| Draft Application Information Requirements | The Working Group review of the draft Application Information Requirements (dAIR) commenced on January 6, 2016. The dAIR outlines the studies, methods and information required for the Application for an Environmental Assessment Certificate. |
| Draft Application Information Requirements Presentation (December 2015) | Discussion of how comments received on first draft Application Information Requirements document were integrated into the next revised version. |
| Application Information Requirements | Final version of the document was issued on May 24, 2016. |
| Aboriginal Consultation Plan (April 2016) | Final version of Aboriginal Consultation Plan that incorporated input received from Aboriginal Groups and EAO. |
| Draft Application Section C content | Draft components of Section C for review and comment by Schedule B Aboriginal groups: baseline summaries, mapping. |
| Aboriginal Consultation Report 1 | Draft summary of general consultation undertaken to date on the Project. For review and comment. |
| Aboriginal Consultation Report 2 | Draft report with Aboriginal Groups-specific information |

| Document | Description |
|----------|--|
| | on consultation undertaken to date on the Project. For review and comment. |

Meetings with Musqueam – pre-Application Phase

During the pre-Application Phase, the Ministry met twice with Musqueam (see list of meetings for details).

Musqueam attended two EAO-led Working Group meetings and engaged directly with EAO regarding the EA process. The Working Group meetings focused on the following:

- Working Group Meeting (January 21, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - Project overview and update
 - Key Areas of Study
 - dAIR Overview
 - Preliminary conclusions from study results to date

- Working Group Meeting (March 10, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - List of materials available on Project website
 - Review of comments received on dAIR and resulting changes to the dAIR
 - Description and rationale of assessment areas

Communications Methods

During the pre-Application Phase, email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Musqueam representatives
- Follow up to meetings or earlier communications
- Provision of Project-related documents, updates and sharing of information
- Response to concerns or questions in relation to the Project
- Clarification of information and feedback shared by Musqueam

- To address and resolve Project-related concerns

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Musqueam
- Confirmation of information and follow up to previous communications
- Updates and sharing of information
- To address and resolve Project-related concerns

Documents for review were shared via email, in letter format and via mail/courier, including:

- Letter requesting review of Draft Part C content for the Application
- Letter requesting review of Draft Aboriginal Consultation Report 1
- Letter requesting review of Draft Aboriginal Consultation Report 2

As previously noted, Musqueam commented on draft Consultation Report 1. Musqueam also submitted comments on draft Part C content. Where appropriate, the draft content has been revised to reflect the input received from Musqueam.

In March 2016, Musqueam submitted a letter to the Ministry in relation to the use of Musqueam information. The Ministry responded to Musqueam in a meeting on April 13, 2016 and via letter (April 20, 2016) addressing questions and concerns with respect to the appropriate use Musqueam information.

On May 19 2016, Musqueam submitted a draft MoU to the Ministry intended to define a positive and productive way forward on the Project. The Ministry is committed to working with Musqueam with respect to the draft MoU to continued consultation and to a positive, mutually respectful and productive working relationship on the Project. The Ministry and Musqueam have different perspectives regarding consultation undertaken to date. Musqueam has indicated that consultation during the Initial Consultation Phase and pre-Application phase was not meaningful. The Ministry disagrees with this view and remains committed to continued consultation with Musqueam during the Application Review Phase.

Consultation on Aboriginal Consultation Report 2

Pursuant to the Section 11 Order, a draft version of Aboriginal Consultation Report 2 was shared with Musqueam for review and comment. Aboriginal Groups were asked to provide their comments by June 17, 2016; however, any input received prior to June 29, 2016 was considered and, where appropriate, incorporated into the final Aboriginal Consultation Report 2. Musqueam did not provide comments on Aboriginal Consultation

Report 2; however, the Ministry continues to welcome Musqueam's feedback on the document and will respond to any input received.

Musqueam will be provided with a final copy of Aboriginal Consultation Report 2.

Concerns, Issues and Interests Raised by Musqueam

Consultation efforts to date, have sought to identify and address concerns and issues raised by Musqueam during the Initial Consultation and pre-Application Phases. The Ministry requested Musqueam's input on Appendix A: Key Issues and Concerns to both Aboriginal Consultation Reports to ensure that issues and concerns have been accurately and appropriately captured. Aboriginal Consultation Report 2's Appendix A has been revised to reflect input received to date and to include status and next steps. This table is also included in Part C as Appendix I2.

2.10 Summary of Consultation Activities with Penelakut Tribe

The following section summarizes consultation undertaken with Penelakut Tribe during the Initial Consultation and the pre-Application Phases of the Project. This content reflects efforts taken to consult with Penelakut Tribe and issues, concerns and interests raised to date. The Ministry considered Penelakut Tribe's input on the draft of this Consultation Report, and revised content where appropriate, and will share a final version of the Consultation Report with Penelakut Tribe.

Cowichan Tribes, Halalt First Nation, Penelakut Tribe and Stz'uminus First Nation advised the Ministry that they would participate in the environmental assessment process as part of Cowichan Nation Alliance. As noted below, the Ministry provided information and funding directly to Penelakut Tribe. However, Cowichan Nation Alliance provided feedback and participated in meetings and fieldwork. Unless noted otherwise, Cowichan Tribes represented Cowichan Nation Alliance in correspondence, meetings and fieldwork.

Initial Consultation Phase

The Ministry initiated consultation with Penelakut Tribe in early 2014.

In support of consultation during the Initial Consultation Phase the following Ministry-led activities have been undertaken with Penelakut Tribe:

- Meetings with Penelakut Tribe Chief and Council, staff and consultants;
- Site visit;
- Sharing of Project-related materials;
- Sharing of draft documents for review and comment;

- Provision of capacity funding to support participation in consultation activities, review of documents, and submission of studies.

During initial discussions with Penelakut Tribe, and as demonstrated in the Consultation Plan and participation funding agreements with Penelakut Tribe, the Ministry sought input in the development of a consultation approach, and later a Consultation Plan, specific to Penelakut Tribe.

Penelakut Tribe was represented by Cowichan Nation Alliance in meetings and fieldwork. Penelakut Tribe participated in a site visit which focused on key Project components, mutual sharing of information, plans for Tunnel decommissioning, the Deas Slough Bridge, and Deas Island, as well as anticipated works and enhancement opportunities for Green Slough.

Consultation activities during this period were focused on, among other things, the Project scope and schedule, proposed Studies/Valued Components, and identification of potential impacts on Penelakut Tribe's Aboriginal Interests and mitigation measures that may be used to avoid or minimize any effects.

These discussions were supported by presentations and where possible, involved the Project's subject matter experts. The Ministry offered to present on any topic of interest to Penelakut Tribe during this phase including any of the presentations from the May 2015 Environmental Update package (contents detailed in list of materials).

During the Initial Consultation Phase, the Ministry sought Penelakut Tribe's input on the following EA-related documents:

- Project Description and Key Areas of Study
- Draft Archaeological Overview Assessment
- Draft Archaeological Heritage Resources Assessment
- Draft Aboriginal Consultation Plan
- Draft Application Information Requirements

With the exception of the draft Aboriginal Consultation Plan, the Ministry met with Penelakut Tribe, represented by Cowichan Nation Alliance, and walked through these draft documents. Focused discussions on these documents were intended to explain the scope and content, to respond to any initial questions and to elicit input.

While early drafts of these documents such as the Project Description and Key Areas of Study and the draft Application Information Requirements were shared during the Initial Consultation Phase, they were provided again in their revised format for further review in the pre-Application Phase.

Meetings with Penelakut Tribe

Between early 2014 and May 2016, the Ministry and Penelakut Tribe or Cowichan Nation Alliance discussed and exchanged Project-related information through emails, phone calls, a community meeting and in-person meetings. Meetings and related activities undertaken with Penelakut Tribe or Cowichan Nation Alliance in relation to the Project are outlined below.

At meetings with Cowichan Nation Alliance during Initial Consultation, the Ministry provided introductory information regarding the proposed Project scope and Project schedule, and sought input with respect to Penelakut Tribe's past, current and future use of the Project area for the exercise of identified Aboriginal Interests, and any concerns related to potential impacts on Penelakut Tribe's Aboriginal Interests. The Ministry also sought to determine C Penelakut Tribe's preferences with respect to participation in Project consultation, EA review, and related activities. During the initial meetings, communications protocols were established and key contacts were identified and/or confirmed. Penelakut Tribe confirmed that they would like to receive notifications directly; however, they would be represented by Cowichan Nation Alliance in correspondence, meetings and fieldwork.

In coordinating and conducting meetings with Cowichan Nation Alliance, wherever possible, the Ministry has ensured the following:

- Meetings were held at the preferred location and in the preferred format for Cowichan Nation Alliance.
- Meetings were scheduled at a date and time convenient for Cowichan Nation Alliance and that facilitated the attendance of key representatives.
- Input into the agenda was considered in the planning of the meeting and, where input had not been provided beforehand, the agenda made provisions for additional topics to be discussed.
- Technical and knowledgeable Ministry representatives have been present.
- Materials have been shared beforehand and are provided in a preferred format.
- Meetings have been respectful, productive and consistent with the principles and objectives of the Consultation Plan.

During this period, key topics and presentations covered during meetings with Cowichan Nation Alliance include: Archaeology/Heritage Resources, Wildlife, Marine Use, Fish and Fish Habitat, Traffic, Human Health (air and noise), River Hydraulics and Morphology, Utilities, Green Slough concept, Project Description and Key Areas of Study document, Project Definition Report and the Draft Application Information Requirements.

As outlined in the Project’s Consultation Plan, the Ministry has been committed to sharing Project-related information with Cowichan Nation Alliance members as it becomes available. The Ministry considered the provision of early drafts of key EA documents to Cowichan Nation Alliance members as an opportunity to:

- Acknowledge and respond, in part, to known concerns regarding the high volume of project referrals, challenging timelines for review and limited resources to allocate to EA review processes;
- Meet the objective of sharing Project-related documents in a timely manner with the intent to facilitate Cowichan Nation Alliance members’ review and comment;
- Consider and incorporate input, address concerns and identify gaps in relation to key aspects of the Project (e.g. Valued Components, studies and study area boundaries) prior to the pre-Application Phase; and to
- Allow time for meetings to be coordinated and conducted regarding particular documents or aspect of the Project of interest to Cowichan Nation Alliance members in advance of the pre-Application Phase.

During the Initial Consultation Phase, the Ministry communicated with Cowichan Nation Alliance members through letters, email and phone calls.

Letters sent to Penelakut Tribe during this consultation Phase include:

- Introductory letters notifying Penelakut Tribe of the Project and offering to meet regarding the proposed Project;
- Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment letters to Penelakut Tribe requesting review and comment on the draft Archaeological Overview Assessment.
- Project Description letters to Penelakut Tribe accompanying a draft copy of the Project Description and Key Areas of Study document requesting review and comment; and

Email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Penelakut Tribe;
- Follow up to meetings or earlier communications;
- Provision of Project-related documents, updates and sharing of information;
- Response to concerns or questions in relation to the Project;
- Clarification of information and feedback shared by Penelakut Tribe; and
- To address and resolve Project-related concerns.

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Penelakut Tribe;
- Confirmation of information and follow up to previous communications;
- Updates and sharing of information; and
- To address and resolve Project-related concerns.

Aboriginal Consultation Plan – Penelakut Tribe review and comment

From the beginning of consultation, the Ministry worked with Penelakut Tribe to develop a mutually acceptable consultation approach, including the manner in which Penelakut Tribe was to be kept informed about the Project, and the means by which comments (e.g., on the Project, its potential effects and the mitigation measures that may be used to avoid or minimize those effects) were to be communicated and addressed by the Ministry.

The Ministry's Draft Aboriginal Consultation Plan was informed by regulatory and legal requirements, the importance of enhancing or maintaining a positive, respectful and productive working relationship with Penelakut Tribe, and specific input received during initial GMT consultation meetings with Cowichan Nation Alliance representatives. The Draft Consultation Plan listed consultation activities, agreed to by both parties, and

specified under the Penelakut Tribe's capacity funding agreement.

The Ministry undertook the activities below in order to obtain and, where appropriate, incorporate, input on the Draft Consultation Plan:

- Email request for review and comment with the Draft Aboriginal Consultation Plan provided as an attachment.
- Follow up communications (email and phone calls) to schedule a meeting to discuss the Draft Consultation Plan.
 - Discuss or obtain clarification on any comments provided by Cowichan Nation Alliance representatives to the Ministry.
- Revision of Draft Consultation Plan
- Sharing of Revised Consultation Plan and a summary of responses to Cowichan Nation Alliance's comments/input.
 - Revised Consultation Plan and, for ease of reference, original Draft Consultation Plan provided via email.
 - Summary of comments/input provided by Cowichan Nation Alliance and corresponding action taken by the Ministry (i.e. revision to plan, comment "noted", request for further discussion regarding request).

In consideration of the confidential nature of comments provided on the draft Aboriginal Consultation Plan and that specific consultation activities were planned for each Aboriginal group, the Ministry responded directly to both Penelakut Tribe and Cowichan Nation Alliance regarding their respective comments on the Aboriginal Consultation Plan. Where Aboriginal Groups comments or requests did not result in changes to the Plan, a response was provided, along with an offer to meet to discuss any outstanding concerns or questions. Based on feedback received to date and discussions with Penelakut Tribe and Cowichan Nation Alliance on this matter, the Ministry is of the understanding that Penelakut Tribe have no outstanding concerns or comments with respect to the Plan.

Comments were received from Cowichan Nation Alliance on the Draft Aboriginal Consultation Plan via letter, October 30 2015. The Consultation Plan was revised, based on input received from Cowichan Nation Alliance and other Aboriginal Groups, and approved by EAO on April 6, 2016.

Capacity Funding

During Initial Consultation meetings, Penelakut Tribe identified the need for capacity funding to support Penelakut Tribe's involvement in Project consultation activities, review of EA-related documents and participation in the pre-Application phase of the EA

process. Penelakut Tribe also identified the need for funding for a Penelakut Tribe Study. The Ministry and Penelakut Tribe worked together to finalize a funding agreement. This agreement specifies the activities covered under the agreement and Project/EA-related documents for Penelakut Tribe's review and comment.

Involvement in Archaeological Component of the Project

From the outset of discussions, Penelakut Tribe identified the importance of the archaeological component of the Project and of Penelakut Tribe's involvement in fieldwork and review of draft archaeological documents. All draft archaeological documents were shared with Penelakut Tribe for review and comment. The Ministry and its archaeologist met with Penelakut Tribe to present on this aspect of the Project. Cowichan Nation Alliance representatives from Cowichan Tribes, Penelakut Tribe and Stz'uminus First Nation participated in all archaeological fieldwork for the Project.

Cowichan Nation Alliance commented on the Draft Heritage Resources Overview Assessment via letter June 25, 2015.

During Initial Consultation Phase, Penelakut Tribe and Cowichan Nation Alliance provided input on the Project and commented on EA-related documents in meetings, via email, phone and letter.

Documents and formal comments shared with Penelakut Tribe during this phase include:

- FLNRO Map of Cowichan Nation Alliance Use and Occupancy of the Project Area (Email Feb 11, 2015)
- Comment on Draft Project Description and Key Areas of Study (Letter March 09, 2015)
- Comments on Heritage Resources Overview Assessment (Letter June 25, 2015)
- Comments on Draft Application Information Requirements (Letter August 05, 2015)
- Comments on Draft Aboriginal Consultation Plan (Letter October 30, 2015)
- Salish Sea Vessel Traffic Projections (Email November 19, 2015)

The Ministry provided Penelakut Tribe with funding for the submission of a Traditional Use Study. The following three studies were submitted to the Ministry:

- Cowichan Nation Traditional, Current, and Planned Future Use of the George Massey Tunnel Replacement Bridge Project Area, prepared by Candace Charlie for Cowichan Tribes, on behalf of the Cowichan Nation Alliance, August 9, 2015
- George Massey Tunnel Replacement Project: Cowichan Occupation and Use of the Project Lands, prepared by Dorothy Kennedy for David Robbins of

Woodward and Co., Counsel for the Cowichan Tribes, on behalf of the Cowichan Nation Alliance, August 25, 2015

- Historical Geography of Cowichan Land Use and Occupancy Lower Fraser River: Map Series and Report, prepared for Woodward and Company and the Cowichan Tribes by Kenneth G. Brealey, May 31, 2010

Pre-Application Consultation Phase

The following section outlines consultation activities that the Ministry has undertaken with Penelakut Tribe during the pre-Application Phase. The approach was developed with input from Penelakut Tribe and Cowichan Nation Alliance during the Initial Consultation Phase described above and EAO, and is outlined in the Consultation Plan. It is also informed by EAO's Section 11 Order, specifically Part G section 13 and 14, which outlines consultation requirements for the Ministry.

As it pertains to consultation with Penelakut Tribe, during the pre-Application phase, the Ministry has:

- Provided capacity funding to support continued involvement in Project consultation activities and the regulatory process;
- Provided relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Penelakut Tribe's Aboriginal Interests;
- Identified and provided, where possible, opportunities for Penelakut Tribe and Cowichan Nation Alliance to participate in fieldwork (River otter study);
- Identified and documented questions, issues and interests raised by Penelakut Tribe and Cowichan Nation Alliance;
- Continued to work with Penelakut Tribe to identify potentially affected Aboriginal Interests;
- Identified measures to avoid, mitigate, or where required accommodate, potential adverse effects on Aboriginal Interests as appropriate; and
- Supported EAO-led Technical Working Group.

Funding for Application Review

The Ministry will work with Penelakut Tribe with respect to the provision of capacity funding for the Application Review Phase, with the aim of providing reasonable capacity support for participation in the review of the EA and any related permitting processes. Funding is intended to facilitate participation in technical reviews and analyses, for involvement in ongoing consultation activities (as specified in the Consultation Plan), to

support Penelakut Tribe in presenting information regarding their Aboriginal Interests and to ensure the consultation requirements pursuant to the Section 11 Order are met and the Consultation Plan is implemented as intended. The Ministry will work with Penelakut Tribe in an effort to finalize a funding agreement for the Application Review phase.

Consultation on EA-related documents

During this phase, the Ministry consulted Penelakut Tribe on the following Project-related documents:

- Draft Project Description and Key Areas of Study (Project Description);
- Draft Application Information Requirements;
- Content of draft Part C of the Environmental Assessment Application; and
- Draft Consultation Report 1

The Ministry provided draft Part C content and mapping to Penelakut Tribe for review and comment by letters/emails (April 18, 2016). Cowichan Nation Alliance provided comments on this draft via a letter/email (May 05, 2016) along with the Cowichan Nation Alliance Declaration (signed Jan 2016) and Schedule A and B maps.

In letters/emails of April 22, 2016, the Ministry provided draft Consultation Report 1 to Penelakut Tribe for review and comment prior to finalization and submission to EAO. Penelakut Tribe and Cowichan Nation Alliance reviewed the draft and Cowichan Nation Alliance advised that they had no comments or requested changes (email May 05, 2015).

During the pre-Application Phase, documents/information shared by Penelakut Tribe includes:

- Environment Canada's Streambank Lupine information (Email March 31, 2016)
- Steveston Diking Referral Part 1 & 2 (Email March 16, 2016)
- Cowichan Nation Alliance Strength of Claim Assessment – Aboriginal Right to Fish for Food in the South Arm of the Fraser River (Email April 15 2016)
- List of Place Names (Working Group, March 10, 2016)

Cowichan Nation Alliance participated in the Working Group and commented on the Draft Application Information Requirements. The Ministry responded to the Working Group on comments received in relation to the dAIR.

Participation in Fieldwork

In April 2016, Penelakut Tribe and Cowichan Nation Alliance were invited to participate

in river otter-related fieldwork. The objectives of this work were to document river otter relative abundance within the Regional Assessment Area, document and describe use of riparian areas, identify high use areas, and potential areas and options for mitigation. A Cowichan Nation Alliance representative from Penelakut Tribe participated in this work.

Materials shared with Penelakut Tribe during the pre-Application Phase are outlined below:

| Document | Description |
|---|---|
| Project Description and Key Areas of Study (Project Description) | Document prepared according to guidance provided in EAO's <i>Guidelines for Preparing a Project Description for an Environmental Assessment in British Columbia</i> (EAO 2013). |
| Draft Application Information Requirements | The Working Group review of the draft Application Information Requirements (dAIR) commenced on January 6, 2016 . The dAIR outlines the studies, methods and information required for the Application for an Environmental Assessment Certificate. |
| Draft Application Information Requirements Presentation (December 2015) | Discussions of how comments received on first draft Application Information Requirements document were integrated into the next revised version. |
| Application Information Requirements | Final version of the document was issued on May 24, 2016. |
| Aboriginal Consultation Plan (April 2016) | Final version of Aboriginal Consultation Plan that incorporated input received from Aboriginal Groups and EAO. |
| List of Project-related documents on the GMT Project website | A list of Project-related documents available in the Project document library on the Project website. |
| Health Impact Assessment (HIA) scoping document | Document outlining scope of the HIA and input being sought from Aboriginal groups/Working Group members. |

Meetings with Penelakut Tribe – pre-Application Phase

During the pre-Application Phase, the Ministry met three times with Cowichan Nation Alliance (see list of meetings for details) and conducted a conference call in relation to Cowichan Nation Alliance' interest in the procurement process and Project-related benefits and to discuss comments on the draft Part C content and Aboriginal Consultation Report 1.

Cowichan Nation Alliance attended two EAO-led Working Group meetings and communicated directly with EAO with respect to the EA process. Halalt represented Cowichan Nation Alliance at the first Working Group meeting. Halalt First Nations and Cowichan Tribes represented Cowichan Nation Alliance at the second Working Group meeting. The EAO-led Working Group meetings focused on the following:

- Working Group Meeting (January 21, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - Project overview and update
 - Key Areas of Study
 - dAIR Overview
 - Preliminary conclusions from study results to date
- Working Group Meeting (March 10, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - List of materials available on Project website
 - Review of comments received on dAIR and resulting changes to the dAIR

- Description and rationale of assessment areas

Cowichan Nation Alliance was offered and provided with two separate Working Group meetings which took place following EAO-led Working Group meetings. These were attended by Cowichan Tribes, Halalt First Nation, Penelakut Tribe and Stz'uminus First Nation.

Communications Methods

During the pre-Application Phase, email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Penelakut Tribe and Cowichan Nation Alliance
- Follow up to meetings or earlier communications
- Provision of Project-related documents, updates and sharing of information
- Response to concerns or questions in relation to the Project
- Clarification of information and feedback shared by Penelakut Tribe and Cowichan Nation Alliance
- To address and resolve Project-related concerns

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Penelakut Tribe and Cowichan Nation Alliance
- Confirmation of information and follow up to previous communications
- Updates and sharing of information
- To address and resolve Project-related concerns

Documents for review were shared via email, in letter format and via mail/courier. Letters sent to Penelakut Tribe during this Phase include:

- Letter requesting review of Draft Part C content
- Letter requesting review of Draft Aboriginal Consultation Report 1
- Letter requesting review of Draft Aboriginal Consultation Report 2

Consultation on Aboriginal Consultation Report 2

Pursuant to the Section 11 Order, a draft version of this report was shared with Penelakut Tribe for review and comment.

Penelakut Tribe provided feedback on Aboriginal Consultation Report 2 via a Cowichan Nation Alliance letter of June 22, 2016, noting an error on page 159 that needed to be addressed in the revised document and requesting the table of meetings (pages 151-154) be modified to provide greater clarity with respect to meeting attendees. Aboriginal Consultation Report 2 has been revised to reflect this input.

Penelakut Tribe will be provided with a final copy of Aboriginal Consultation Report 2 along with an explanation of how their input has been considered and reflected in the final Aboriginal Consultation Report 2.

Concerns, Issues and Interests Raised by Cowichan Nation Alliance

Consultation efforts to date, have sought to identify and address concerns and issues raised by Penelakut Tribe and Cowichan Nation Alliance during the Initial Consultation and pre-Application Phases. The Ministry requested Penelakut Tribe's input on Appendix A: Key Issues and Concerns to both Aboriginal Consultation Reports to ensure that issues and concerns have been accurately and appropriately captured. Aboriginal Consultation Report 2's Appendix A has been revised to reflect input received to date and to include status and next steps. This table is also included in Part C as Appendix J2.

2.11 Summary of Consultation Activities with Semiahmoo First Nation

The following section summarizes consultation undertaken with the Semiahmoo First Nation (Semiahmoo) during the Initial Consultation and the pre-Application Phases of the Project. This content reflects efforts taken to consult with Semiahmoo and of the issues, concerns and interests raised to date.

Initial Consultation

The Ministry initiated consultation with Semiahmoo First Nation in early 2014. In support of consultation during the Initial Consultation Phase the following Ministry-led activities have been undertaken with Semiahmoo First Nation:

- Meetings with Semiahmoo First Nation Chief and Council, staff and consultants;
- Site visit;
- Sharing of Project-related materials;
- Sharing of draft documents for review and comment;
- Provision of capacity funding to support participation in consultation activities, review of documents, and for a Semiahmoo First Nation Traditional Use Study.

During initial discussions with Semiahmoo First Nation, and as demonstrated in the Consultation Plan and Semiahmoo/George Massey Tunnel Replacement Project Funding Agreement, the Ministry sought input in the development of a consultation approach, and later a Consultation Plan, specific to Semiahmoo.

In addition to meetings with Semiahmoo representatives during the Initial Consultation Phase, Semiahmoo was invited to participate in a site visit which focused on key Project components, mutual sharing of information, plans for Tunnel decommissioning, the Deas Slough Bridge, and Deas Island, as well as anticipated works and enhancement opportunities for Green Slough.

Consultation activities during this period were focused on, among other things, the Project scope and schedule, proposed Studies/Valued Components, and identification of potential impacts on Semiahmoo's Aboriginal Interests and mitigation measures that may be used to avoid or minimize any effects.

These discussions were supported by presentations and where possible, involved the Project's subject matter experts. The Ministry offered to present on any topic of interest to Semiahmoo during this phase including any of the presentations from the May 2015 Environmental Update package (contents detailed in list of materials).

During the Initial Consultation Phase, the Ministry sought Semiahmoo's input on the following EA-related documents:

- Project Description and Key Areas of Study
- Draft Archaeological Overview Assessment
- Draft Archaeological Heritage Resources Assessment
- Draft Aboriginal Consultation Plan
- Draft Application Information Requirements

The Ministry met with Semiahmoo and walked through the draft documents, in an effort to explain the scope and content, to respond to any initial questions and to elicit input.

While early drafts of these documents such as the Project Description and Key Areas of Study and the draft Application Information Requirements were shared during the Initial Consultation Phase, they were provided again in their revised format for further review in the pre-Application Phase.

Meetings with Semiahmoo First Nation

Between early 2014 and May 2016, the Ministry and the Semiahmoo First Nation discussed and exchanged Project-related information through emails, phone calls, and

meetings. Meetings and related activities undertaken with Semiahmoo First Nation in relation to the Project are outlined below.

At meetings with Semiahmoo First Nation during Initial Consultation, the Ministry provided introductory information regarding the proposed Project scope and Project schedule, and sought input with respect to Semiahmoo's past, current and desired future use of the Project area for the exercise of identified Aboriginal Interests, and any concerns related to potential impacts on Semiahmoo's Aboriginal Interests. The Ministry also sought to determine Semiahmoo's preferences with respect to participation in Project consultation, EA review, and related activities. During the initial meetings, communications protocols were established and key contacts were identified and/or confirmed.

In coordinating and conducting meetings with Semiahmoo, wherever possible, the Ministry has ensured the following:

- Meetings were held at the preferred location and in the preferred format for Semiahmoo.
- Meetings were scheduled at a date and time convenient for Semiahmoo and that facilitated the attendance of key representatives.
- Input into the agenda was considered in the planning of the meeting and, where input had not been provided beforehand, the agenda made provisions for additional topics to be discussed.
- Technical and knowledgeable Ministry representatives have been present.
- Materials have been shared beforehand and are provided in a preferred format.
- Meetings have been respectful, productive and consistent with the principles and objectives of the Consultation Plan.

During this period, key topics and presentations covered during meetings with Semiahmoo include: Archaeology/Heritage Resources, Wildlife, Marine Use, Fish and Fish Habitat, Traffic, Human Health (air and noise), River Hydraulics and Morphology, Utilities, Green Slough concept, Project Description and Key Areas of Study document, Project Definition Report and the Draft Application Information Requirements.

In addition to meetings with Semiahmoo representatives during the Initial Consultation Phase, Semiahmoo participated in a site visit which focused on key Project components, mutual sharing of information, plans for Tunnel decommissioning, the Deas Slough Bridge, and Deas Island, as well as anticipated works and enhancement opportunities for Green Slough.

As outlined in the Project's Consultation Plan, the Ministry has been committed to sharing Project-related information with Semiahmoo First Nation as it becomes available. The Ministry considered the provision of early drafts of key EA documents to Semiahmoo as an opportunity to:

- Acknowledge and respond, in part, to known concerns regarding the high volume of project referrals, challenging timelines for review and limited resources to allocate to EA review processes;
- Meet the objective of sharing Project-related documents in a timely manner with the intent to facilitate Semiahmoo First Nation's review and comment;
- Consider and incorporate input, address concerns and identify gaps in relation to key aspects of the Project (e.g. Valued Components, studies and study area boundaries) prior to the pre-Application Phase; and to
- Allow time for meetings to be coordinated and conducted regarding particular documents or aspect of the Project of interest to Semiahmoo in advance of the pre-Application Phase.

During the Initial Consultation Phase, the Ministry communicated with Semiahmoo First Nation through letters, email and phone calls.

Letters sent to Semiahmoo during this consultation Phase include:

- Introductory letter notifying Semiahmoo First Nation of the Project and offering to meet regarding the proposed Project;
- Project Description letter accompanying a draft copy of the Project Description and Areas of Study document requesting review and comment; and
- Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment letter requesting review and comment on the Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment (document also provided).

Email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Semiahmoo First Nation representatives;
- Follow up to meetings or earlier communications;
- Provision of Project-related documents, updates and sharing of information;
- Response to concerns or questions in relation to the Project;
- Clarification of information and feedback shared by Semiahmoo; and
- To address and resolve Project-related concerns.

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Semiahmoo First Nation;
- Confirmation of information and follow up to previous communications;
- Updates and sharing of information; and
- To address and resolve Project-related concerns.

Project-related documents and materials used during consultation are listed in Aboriginal Consultation Report 1.

Aboriginal Consultation Plan – Semiahmoo Review and Comment

From the beginning of consultation, the Ministry worked with Semiahmoo to develop a mutually acceptable consultation approach, including the manner in which Semiahmoo was to be kept informed about the Project, and the means by which comments (e.g., on the Project, its potential effects and the mitigation measures that may be used to avoid or minimize those effects) were to be communicated and addressed by the Ministry.

The Ministry's Draft Aboriginal Consultation Plan was informed by regulatory and legal requirements, the importance of enhancing or maintaining a positive, respectful and productive working relationship with Semiahmoo First Nation, an established working relationship with Semiahmoo, and specific input received during initial GMT consultation meetings with Semiahmoo First Nation. The Draft Consultation Plan listed consultation activities, agreed to by both parties, and specified under the Semiahmoo/GMT capacity funding agreement.

The Ministry undertook the activities below in order to obtain and, where appropriate, incorporate, input on the Draft Aboriginal Consultation Plan:

- Email request for review and comment with the Draft Aboriginal Consultation Plan provided as an attachment.
- Follow up communications (email and phone calls) to schedule a meeting to discuss the Draft Aboriginal Consultation Plan.
 - Discuss or obtain clarification on any comments provided by Semiahmoo First Nation to the Ministry.
- Revision of Draft Aboriginal Consultation Plan
- Sharing of Revised Aboriginal Consultation Plan and a summary of responses to Semiahmoo's comments/input.
 - Revised Aboriginal Consultation Plan and, for ease of reference, original Draft Aboriginal Plan provided via email
 - Summary of comments/input provided by Semiahmoo and corresponding action taken by the Ministry (i.e. revision to plan, comment "noted", request for further discussion regarding request)

In consideration of the confidential nature of comments provided on the draft Plan and that specific consultation activities were planned for each Aboriginal group, the Ministry responded directly to each group regarding their respective comments on the Plan. Where Aboriginal Groups comments or requests did not result in changes to the Plan, a response was provided, along with an offer to meet to discuss any outstanding concerns or questions. Based on feedback received to date and discussions with Semiahmoo, the Ministry is of the understanding that Semiahmoo First Nation has no outstanding concerns or comments with respect to the Plan.

The Consultation Plan was revised, based on input received from Semiahmoo First Nation and other Aboriginal Groups, and approved by EAO on April 6, 2016. Semiahmoo submitted a letter to the Ministry on October 28, 2015 indicating that funding was required for the duration of the Plan and requesting specific provisions in relation to Aboriginal participation in delivery of the Project.

Capacity Funding

During Initial Consultation meetings, Semiahmoo identified the need for capacity funding to support Semiahmoo's involvement in Project consultation activities, review of EA-related documents and participation in the pre-Application phase of the EA process. Semiahmoo First Nation also identified the need for funding for a Semiahmoo First Nation Traditional Use Study. The Ministry and Semiahmoo worked together to finalize a funding agreement. The agreement specifies the activities covered under the agreement and Project/EA-related documents for Semiahmoo's review and comment. Although funding has been allocated, Semiahmoo has not yet submitted a Traditional Use Study.

Involvement in Archaeological Component of the Project

From the outset of discussions, Semiahmoo First Nation identified the importance of the archaeological component of the Project and of their involvement in fieldwork and review of draft archaeological documents. All draft archaeological documents were shared with Semiahmoo First Nation for review and comment. The Ministry and its archaeologist met with Semiahmoo First Nation to present on this aspect of the Project. Semiahmoo First Nation was invited to participate in all archaeological fieldwork for the Project.

Pre-Application Consultation

The following section outlines consultation activities that the Ministry has undertaken with Semiahmoo First Nation during the pre-Application Phase. The approach was developed with input from Semiahmoo during the Initial Consultation Phase described above and EAO, and is outlined in the Consultation Plan. It is also informed by EAO's Section 11 Order, specifically Part G section 13 and 14, which outlines consultation requirements for the Ministry.

As it pertains to consultation with Semiahmoo, during the pre-Application phase, the Ministry has:

- Provided capacity funding to support continued involvement in Project consultation activities and the regulatory process;
- Provided all relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Semiahmoo First Nation's Aboriginal Interests;
- Identified and provided, where possible, opportunities for Semiahmoo to participate in fieldwork (River otter study);
- Identified and documented questions, issues and interests raised by Semiahmoo First Nation;
- Continued to work with Aboriginal Groups to identify potentially affected Aboriginal

Interests;

- Identified measures to avoid, mitigate, or where required accommodate, potential adverse effects on Aboriginal Interests as appropriate; and
- Supported EAO-led Technical Working Group.

Funding for Application Review

The Ministry will work with Semiahmoo First Nation with respect to the provision of capacity funding for the Application Review Phase, with the aim of providing reasonable capacity support for participation in the review of the EA and any related permitting processes. Funding is intended to facilitate participation in technical reviews and analyses, for involvement in ongoing consultation activities (as specified in the Consultation Plan), and to support Semiahmoo in presenting information regarding their respective Aboriginal Interests. Funding is also provided to ensure the consultation requirements pursuant to the Section 11 Order are met and the Consultation Plan is implemented as intended. The Ministry will work with Semiahmoo First Nation in an effort to finalize a funding agreement for the Application Review phase.

Consultation on EA-related documents:

During this phase, the Ministry consulted Semiahmoo First Nation on the following Project-related documents:

- Draft Project Description and Key Areas of Study (Project Description);
- Draft Application Information Requirements;
- Content of draft Part C of the Environmental Assessment Application
- Draft Consultation Report 1

Draft Consultation Report 2 was also provided to Semiahmoo First Nation for review and comment.

Consultation on Aboriginal Consultation Report 1

The Ministry provided draft Consultation Report 1 to Semiahmoo for review and comment prior to finalization and submission to EAO and indicated that feedback received by May 2, 2016 would be incorporated into the final version as appropriate. Semiahmoo First Nation indicated that comments would not be provided due to concerns regarding the procurement process for the Project.

Participation in Fieldwork

In April 2016, Semiahmoo First Nation was invited to participate in river otter-related

fieldwork. The objectives of this work were to document river otter relative abundance within the Regional Assessment Area, document and describe use of riparian areas, identify high use areas, and potential areas and options for mitigation. Semiahmoo did not participate in the fieldwork.

Materials shared with Semiahmoo First Nation during the pre-Application Phase are outlined below:

| Document | Description |
|---|---|
| Project Description and Key Areas of Study (Project Description) | Document prepared according to guidance provided in EAO's <i>Guidelines for Preparing a Project Description for an Environmental Assessment in British Columbia</i> (EAO 2013). |
| Draft Application Information Requirements | The Working Group review of the draft Application Information Requirements (dAIR) commenced on January 6, 2016 . The dAIR outlines the studies, methods and information required for the Application for an Environmental Assessment Certificate. |
| Draft Application Information Requirements Presentation (December 2015) | Discussion of how comments received on first draft Application Information Requirements document were integrated into the next revised version. |
| Application Information Requirements | Final version of the document was issued on May 24, 2016. |
| Aboriginal Consultation Plan (April 2016) | Final version of Aboriginal Consultation Plan that incorporated input received from Aboriginal Groups and EAO. |
| Draft Part C content | Draft components of Part C for review and comment by Schedule B Aboriginal groups: baseline summaries and mapping. |
| Aboriginal Consultation Report 1 | Draft summary of general consultation undertaken to date on the Project. For review and comment. |
| Aboriginal Consultation Report 2 | Draft report with Aboriginal Group-specific information on consultation undertaken to date on the Project. For review and comment. |

Meetings with Semiahmoo

During the pre-Application Phase, the Ministry met twice with Semiahmoo First Nation (see list of meetings for details). Semiahmoo First Nation has participated in the EAO-led Working Group. The EAO-led Working Group meetings focused on the following:

- Working Group Meeting (January 21, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - Project overview and update
 - Key Areas of Study
 - dAIR Overview
 - Preliminary conclusions from study results to date
- Working Group Meeting (March 10, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - List of materials available on Project website
 - Review of comments received on dAIR and resulting changes to the dAIR
 - Description and rationale of assessment areas

Communications Methods

During the pre-Application Phase, email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Semiahmoo First Nation representatives
- Follow up to meetings or earlier communications
- Provision of Project-related documents, updates and sharing of information
- Response to concerns or questions in relation to the Project
- Clarification of information and feedback shared by Semiahmoo First Nation
- To address and resolve Project-related concerns

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Semiahmoo First Nation
- Confirmation of information and follow up to previous communications
- Updates and sharing of information
- To address and resolve Project-related concerns

Documents for review were shared via email, in letter format and via mail/courier. Letters

sent to Semiahmoo during this Phase include:

- Letter requesting review of Draft Part C content
- Letter requesting review of Draft Aboriginal Consultation Report 1
- Letter requesting review of Draft Aboriginal Consultation Report 2

Semiahmoo did not comment on draft Part C content or Consultation Report 1.

On May 18, 2016, the Ministry received a letter from Semiahmoo, Katzie and Kwantlen First Nations expressing concern with the Project's procurement strategy and requesting further dialogue with respect to business opportunities. The three Nations communicated their continued concern with respect to the procurement strategy in a June Project update meeting, whereby they indicated that a response to their May 18, 2016 letter was required prior to their continued engagement on the Project. In a June 23, 2016 letter, Semiahmoo, Katzie and Kwantlen reiterated their concern with the Project's procurement strategy and that the EA and procurement process was advancing prior to their concerns being addressed. The Ministry acknowledges the concerns expressed by the three Nations and will continue to work with Semiahmoo, Katzie and Kwantlen First Nations to address this and any other Project-related concerns.

Consultation on Aboriginal Consultation Report 2

Pursuant to the Section 11 Order, a draft version of Aboriginal Consultation Report 2 was shared with Semiahmoo for review and comment. Semiahmoo did not provide comments on Aboriginal Consultation Report 2, but reiterated that they have significant concern with the Project's procurement strategy and that the EA process is advancing prior to changes to this strategy. Semiahmoo will be provided with a final copy of Aboriginal Consultation Report 2.

Concerns, Issues and Interests Raised by Semiahmoo First Nation

Consultation efforts to date have sought to identify and address concerns and issues raised by Semiahmoo during the Initial Consultation and pre-Application Phases. The Ministry requested Semiahmoo's input on Appendix A: Key Issues and Concerns to both Aboriginal Consultation Reports to ensure that issues and concerns have been accurately and appropriately captured. Aboriginal Consultation Report 2's Appendix A has been revised to reflect input received to date and to include status and next steps. This table is also included in Part C as Appendix K2.

As noted in the above section, Semiahmoo First Nation has expressed significant concern with the Project's procurement strategy. The Ministry is committing to working with Semiahmoo to address this concern.

2.12 Summary of Consultation Activities with Squamish Nation

The following section summarizes consultation undertaken with the Squamish Nation during the Initial Consultation and the pre-Application Phases of the Project. This content reflects efforts taken to consult with Squamish Nation and of the issues, concerns and interests raised to date. The Ministry considered Squamish Nation's input on the draft of this Consultation Report, and revised content where appropriate, and will share a final version of the Consultation Report with Squamish Nation.

Initial Consultation Phase

The Ministry initiated consultation with Squamish Nation in early 2014. In support of consultation during the Initial Consultation Phase the following Ministry-led activities have been undertaken with Squamish Nation:

- Meetings with Squamish Nation staff and consultants;
- Sharing of Project-related materials;
- Sharing of draft documents for review and comment;
- Provision of capacity funding to support participation in consultation activities, review of documents, and submission a Squamish Nation report.

During discussions with Squamish Nation, and as demonstrated in the Consultation Plan and Squamish Nation/George Massey Tunnel Replacement Project Funding Agreement, the Ministry sought input in the development of a consultation approach, and later a Consultation Plan, specific to Squamish Nation.

Consultation activities during this period were focused on, among other things, the Project scope and schedule, proposed Studies/Valued Components, and identification of potential impacts on Squamish Nation's Aboriginal Interests and mitigation measures that may be used to avoid or minimize any effects.

The Ministry offered to share presentations and present on topics of interest to Squamish, such as Fish and Fish Habitat, Archaeology and any of the presentations from the May 2015 Environmental Update package (contents detailed in list of materials).

In addition to meetings with Squamish Nation representatives during the Initial Consultation Phase, Squamish Nation was offered a site visit with a focus on key Project components, mutual sharing of information, plans for Tunnel decommissioning, the Deas Slough Bridge, and Deas Island, as well as anticipated works and enhancement opportunities for Green Slough. Squamish declined a site visit.

During the Initial Consultation Phase, the Ministry sought Squamish Nation's input on the

following EA-related documents:

- Project Description and Key Areas of Study
- Draft Archaeological Overview Assessment
- Draft Archaeological Heritage Resources Assessment
- Draft Aboriginal Consultation Plan
- Draft Application Information Requirements

The Ministry offered to meet with Squamish Nation and walk through these draft documents with the intention to explain the scope and content, to respond to any initial questions and to elicit input. Squamish Nation did not comment on these documents.

While early drafts of these documents such as the Project Description and Key Areas of Study and the draft Application Information Requirements were shared during the Initial Consultation Phase, they were provided again in their revised format for further review in the pre-Application Phase.

Meetings with Squamish Nation

Between early 2014 and May 2016, the Ministry and the Squamish Nation discussed and exchanged Project-related information through emails, phone calls, and in-person meetings. Meetings and related activities undertaken with Squamish Nation in relation to the Project are outlined below.

At meetings with Squamish Nation during the Initial Consultation Phase, the Ministry provided introductory information regarding the proposed Project scope and Project schedule, and sought input with respect to Squamish Nation's past, current and future desired use of the Project area for the exercise of identified Aboriginal Interests, and any concerns related to potential impacts on Squamish Nation's Aboriginal Interests.

The Ministry also sought to determine Squamish Nation's preferences with respect to participation in Project consultation, EA review, and related activities. During this Phase, communications protocols were established and key contacts were identified and/or confirmed.

In coordinating and conducting meetings with Squamish Nation, wherever possible, the Ministry has ensured the following:

- Meetings were held at the preferred location and in the preferred format for Squamish Nation.
- Meetings were scheduled at a date and time convenient for Squamish Nation and that facilitated the attendance of key representatives.

ABORIGINAL CONSULTATION REPORT
George Massey Tunnel Replacement Project

- Input into the agenda was considered in the planning of the meeting and, where input had not been provided beforehand, the agenda made provisions for additional topics to be discussed.
- Technical and knowledgeable Ministry representatives have been present.
- Materials have been shared beforehand and are provided in a preferred format.
- Meetings have been respectful, productive and consistent with the principles and objectives of the Consultation Plan.

During this period, key topics discussed with Squamish Nation include: Archaeology/Heritage Resources, Marine Use, Fish and Fish Habitat, River Hydraulics and Morphology, Green Slough concept, Project Description and Key Areas of Study document and the Draft Application Information Requirements.

As outlined in the Project's Consultation Plan, the Ministry has been committed to sharing Project-related information with Squamish Nation as it becomes available. The Ministry considered the provision of early drafts of key EA documents to Squamish Nation as an opportunity to:

- Acknowledge and respond, in part, to known concerns regarding the high volume of project referrals, challenging timelines for review and limited resources to allocate to EA review processes;
- Meet the objective of sharing Project-related documents in a timely manner with the intent to facilitate Squamish Nation's review and comment;

- Consider and incorporate input, address concerns and identify gaps in relation to key aspects of the Project (e.g. Valued Components, studies and study area boundaries) prior to the pre-Application Phase; and to
- Allow for time for meetings to be coordinated and conducted regarding particular documents or aspect of the Project of interest to Squamish Nation in advance of the pre-Application Phase.

During the Initial Consultation Phase, the Ministry communicated with Squamish Nation through letters, email and phone calls.

Letters sent to Squamish Nation during this consultation Phase include:

- Introductory letter notifying Squamish Nation of the Project and offering to meet regarding the proposed Project;
- Project Description letter accompanying a draft copy of the Project Description and Areas of Study document requesting review and comment; and
- Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment letter requesting review and comment on the Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment (document also provided).

Email communication may have been used for the following purposes:

- Coordination of meetings and other consultation activities with Squamish Nation representatives;
- Follow up to meetings or earlier communications;
- Provision of Project-related documents, updates and sharing of information;
- Response to concerns or questions in relation to the Project;
- Clarification of information and feedback shared by Squamish Nation; and
- To address and resolve Project-related concerns.

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Squamish Nation;
- Confirmation of information and follow up to previous communications;
- Updates and sharing of information; and
- To address and resolve Project-related concerns.

Project-related documents and materials used during consultation are listed in Aboriginal Consultation Report 1.

Aboriginal Consultation Plan – Squamish Nation review and comment

The Ministry has worked with Squamish Nation with respect to determining a mutually acceptable consultation approach, including the manner in which Squamish Nation is to be kept informed about the Project, and the means by which comments (e.g., on the Project, its potential effects and the mitigation measures that may be used to avoid or minimize those effects) are to be communicated and addressed by the Ministry.

The Ministry's Draft Aboriginal Consultation Plan was informed by regulatory and legal requirements, the importance of enhancing or maintaining a positive, respectful and productive working relationship with Squamish Nation, and specific input received during initial discussions with Squamish Nation. The Draft Consultation Plan listed consultation activities, agreed to by both parties, and specified under the Squamish Nation/GMT capacity funding agreement.

The Ministry undertook the activities below in order to obtain and, where appropriate, incorporate, input on the Draft Aboriginal Consultation Plan:

- Email request for review and comment with the Draft Aboriginal Consultation Plan provided as an attachment.
- Follow up communications (email and phone calls) to schedule a meeting to discuss the Draft Aboriginal Consultation Plan
- Sharing of Revised Aboriginal Consultation Plan

Based on feedback received to date and discussion with Squamish Nation on this matter, the Ministry is of the understanding that Squamish Nation has no outstanding concerns or comments with respect to the Plan.

Squamish Nation did not request revisions to the Draft Aboriginal Consultation Plan. The Consultation Plan was revised, based on input received from other Aboriginal Groups, and approved by EAO on April 6, 2016. In consideration of the confidential nature of comments provided on the draft Plan and that specific consultation activities were planned for each Aboriginal group, the Ministry responded directly to each group regarding their respective comments on the Plan.

Capacity Funding

In a December 2015 letter to the Ministry, the Squamish Nation identified the need for capacity funding to support Squamish Nation's involvement in Project consultation activities, review of EA-related documents and participation in the pre-Application phase of the EA process. Squamish Nation subsequently identified the need for funding for a Squamish Nation report. The Ministry and Squamish Nation worked together to finalize a funding agreement. The agreement specifies the activities covered under the agreement

and Project/EA-related documents for Squamish Nation's review and comment. The funding agreement was executed in the pre-Application Phase and Squamish submitted a report on April 26, 2016.

Involvement in Archaeological Component of the Project

From the outset of discussions, Squamish Nation identified the importance of the archaeological component of the Project and of Squamish Nation's involvement in review of draft archaeological documents. All draft archaeological documents were shared with Squamish Nation for review and comment. Squamish Nation representatives were invited to participate in all archaeological fieldwork for the Project.

Pre-Application Consultation Phase

The following section outlines consultation activities that the Ministry has undertaken with Squamish Nation during the pre-Application Phase. The approach informed by EAO's Section 11 Order, specifically Part G section 13 and 14, which outlines consultation requirements for the Ministry.

As it pertains to consultation with Squamish Nation, during the pre-Application phase, the Ministry has:

- Provided capacity funding to support continued involvement in Project consultation activities and the regulatory process;
- Provided all relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Squamish Nation's Aboriginal Interests;
- Identified and provided, where possible, opportunities for Squamish Nation to participate in fieldwork (River otter study);
- Identified and documented questions, issues and interests raised by Squamish Nation;
- Continued to work with Squamish Nation to identify potentially affected Aboriginal Interests;
- Identified measures to avoid, mitigate, or where required accommodate, potential adverse effects on Aboriginal Interests as appropriate; and
- Supported EAO-led Technical Working Group.

Funding for Application Review

The Ministry will work with Squamish Nation with respect to the provision of capacity funding for the Application Review Phase, with the aim of providing reasonable capacity

support for participation in the review of the EA and any related permitting processes. Funding is intended to facilitate participation in technical reviews and analyses, for involvement in ongoing consultation activities (as specified in the Consultation Plan), to support Squamish Nation in presenting information regarding their respective Aboriginal Interests and to ensure the consultation requirements pursuant to the Section 11 Order are met and the Consultation Plan is implemented as intended. The Ministry will work with Squamish Nation in an effort to finalize a funding agreement for the Application Review.

Consultation on EA-related documents

During this phase, the Ministry consulted Squamish Nation on the following Project-related documents:

- Draft Project Description and Key Areas of Study (Project Description);
- Draft Application Information Requirements
- Content of draft Part C of the Environmental Assessment Application
- Draft Consultation Report 1

Draft Consultation Report 2 was also provided to Squamish Nation for review and comment. Where appropriate, Report 2 will be revised based on input received from Squamish Nation and other Aboriginal Groups.

Squamish submit a letter to the Ministry (December 17, 2015) in response to the November 13, 2014 letter requesting Squamish Nation's review of the draft Project Description and Key Areas of Study document. Squamish indicated a concern that the Project could impact their fishing rights on the Fraser River and requested funding for participation in the Project review process. On February 2, 2016, the Ministry responded to the letter indicating that the Ministry would follow up with Squamish upon issuance, by EAO, of the final Section 11 Order. The Section 11 Order assigned Squamish to Schedule B and the Ministry formally began consulting with Squamish accordingly.

Consultation on Aboriginal Consultation Report 1

The Ministry provided draft Consultation Report 1 to Squamish Nation for review and comment prior to finalization and submission to EAO indicating that feedback provided by May 2, 2106 will be incorporated into the final version as appropriate. Squamish Nation reviewed the draft document and had no comments.

Participation in fieldwork

In April 2016, Squamish Nation was invited to participate in river otter-related fieldwork. The objectives of this work were to document river otter relative abundance within the

Regional Assessment Area, document and describe use of riparian areas; identify high use areas, and potential areas and options for mitigation. Squamish Nation did not participate in the fieldwork.

Materials shared with Squamish Nation during the pre-Application Phase are outlined below:

| Document | Description |
|---|---|
| Project Description and Key Areas of Study (Project Description) | Document prepared according to guidance provided in EAO's <i>Guidelines for Preparing a Project Description for an Environmental Assessment in British Columbia</i> (EAO 2013) |
| Draft Application Information Requirements | The Working Group review of the draft Application Information Requirements (dAIR) commenced on January 6, 2016 . The dAIR outlines the studies, methods and information required for the Application for an Environmental Assessment Certificate. |
| Draft Application Information Requirements Presentation (December 2015) | Discussions of how comments received on first draft Application Information Requirements document were integrated into the next revised version. |
| Application Information Requirements | Final version of the document was issued on May 24, 2016. |
| Aboriginal Consultation Plan (April 2016) | Final version of Aboriginal Consultation Plan that incorporated input received from Aboriginal Groups and EAO. |
| Draft Part C content | Draft components of Part C for review and comment by Schedule B Aboriginal groups: baseline summaries and mapping. |
| Aboriginal Consultation Report 1 | Draft summary of general consultation undertaken to date on the Project. For review and comment. |
| Aboriginal Consultation Report 2 | Draft report with Aboriginal Group-specific information on consultation undertaken to date on the Project. For review and comment. |

Meetings with Squamish Nation

During the pre-Application Phase, the Ministry met twice with Squamish Nation in relation to the Project.

Squamish has had communications directly with EAO with respect to the EA process.

Squamish was not invited to the first EAO-led Working Group as it was not yet classified

as a Schedule B Aboriginal group. Squamish was invited to the second EAO-led Working Group meeting, but did not participate. Squamish was provided with materials from both meetings.

The EAO-led Working Group meetings focused on the following:

- Working Group Meeting (January 21, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - Project overview and update
 - Key Areas of Study
 - dAIR Overview
 - Preliminary conclusions from study results to date
- Working Group Meeting (March 10, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - List of materials available on Project website
 - Review of comments received on dAIR and resulting changes to the dAIR
 - Description and rationale of assessment areas

Communications Methods

During the pre-Application Phase, email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Squamish Nation representatives
- Follow up to meetings or earlier communications
- Provision of Project-related documents, updates and sharing of information
- Response to concerns or questions in relation to the Project
- To address and resolve Project-related concerns

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Squamish Nation
- Confirmation of information and follow up to previous communications
- Updates and sharing of information

Documents for review were shared via email, in letter format and via mail/courier. Letters sent to Squamish Nation include:

- Letter requesting review of Draft Part C content
- Letter requesting review of Draft Aboriginal Consultation Report 1
- Letter requesting review of Draft Aboriginal Consultation Report 2

Squamish reviewed and provided comment on draft Part C content, in particular the map of Squamish Nation's asserted traditional territory. Changes were made to the draft content based on input received from Squamish Nation.

Consultation on Aboriginal Consultation Report 2

Pursuant to the Section 11 Order, a draft version of this report was shared with Squamish for review and comment. Squamish Nation also reviewed Aboriginal Consultation Report 2 and had no comments on the document. Squamish confirmed the presentation of Squamish Nation's concerns documented in the accompanying issues table, which has been updated to reflect input provided in a June 14, 2016 meeting.

Squamish will be provided with a final copy of the Consultation Report.

On June 28, 2016, Squamish provided the following comments on Consultation Report 2. Schedule A: Key Issues and Concerns has been modified to reflect this input.

- The Project area is heavily used by migratory birds and eagles. It is important to ensure migratory birds and eagles are protected and that any mitigation is considers a First Nations perspective. (use existing response and that to ensure an Aboriginal perspective is understood, the Ministry will continue to consult Aboriginal groups regarding mitigation).
- Concern with further alienation of Aboriginal fishers from fishing locations and impacts to the exercise of the right to fish. (use response in tables)
- Interest in training and employment opportunities for youth, including archaeological and environmental monitoring. (use response in tables)
- Concern with impacts to marshes and shorelines from tunnel decommissioning. (response exists)
- Importance of proper sampling of dredgeate and testing of materials from tunnel decommissioning prior to disposal or reuse. (response exists)
- Importance of knowing which properties will be acquired and the process for disposition of surplus properties early in the EA process. (use existing response – CNA table and note where information on property acquisition is found and commitment to discuss further with Squamish during ongoing consultation)

Concerns, Issues and Interests Raised by Squamish Nation

Consultation efforts to date, have sought to identify and address concerns and issues raised by Squamish during the Initial Consultation and pre-Application Phases. The Ministry requested Squamish's input on Appendix A: Key Issues and Concerns to both Aboriginal Consultation Reports to ensure that issues and concerns have been accurately and appropriately captured. Aboriginal Consultation Report 2's Appendix A has been revised to reflect input received to date and to include status and next steps. This table is also included in Part C as Appendix J2

2.13 Summary of Consultation Activities with Stz'uminus First Nation

The following section summarizes consultation undertaken with Stz'uminus First Nation during the Initial Consultation and the pre-Application Phases of the Project. This content reflects efforts taken to consult with Stz'uminus First Nation and issues, concerns and interests raised to date. The Ministry considered Stz'uminus First Nation's input on the draft of this Consultation Report, and revised content where appropriate, and will share a final version of the Consultation Report with Stz'uminus First Nation.

Cowichan Tribes, Halalt First Nation, Penelakut Tribe and Stz'uminus First Nation advised the Ministry that they would participate in the environmental assessment process as part of Cowichan Nation Alliance. As noted below, the Ministry provided information and funding directly to Stz'uminus First Nation. However, Cowichan Nation Alliance provided feedback and participated in meetings and fieldwork. Unless noted otherwise, Cowichan Tribes represented Cowichan Nation Alliance in correspondence, meetings and fieldwork.

Initial Consultation Phase

The Ministry initiated consultation with Stz'uminus First Nation in early 2014.

In support of consultation during the Initial Consultation Phase the following Ministry-led activities have been undertaken with Stz'uminus First Nation:

- Meetings with Stz'uminus First Nation Chief and Council, staff and consultants;
- Site visit;
- Sharing of Project-related materials;
- Sharing of draft documents for review and comment;
- Provision of capacity funding to support participation in consultation activities, review of documents, and submission of studies.

During initial discussions with Stz'uminus First Nation, and as demonstrated in the

Consultation Plan and participation funding agreements with Stzùminus First Nation, the Ministry sought input in the development of a consultation approach, and later a Consultation Plan, specific to Stzùminus First Nation.

Stzùminus First Nation was represented by Cowichan Nation Alliance in meetings and fieldwork. Stzùminus First Nation participated in a site visit which focused on key Project components, mutual sharing of information, plans for Tunnel decommissioning, the Deas Slough Bridge, and Deas Island, as well as anticipated works and enhancement opportunities for Green Slough.

Consultation activities during this period were focused on, among other things, the Project scope and schedule, proposed Studies/Valued Components, and identification of potential impacts on Stzùminus First Nation's Aboriginal Interests and mitigation measures that may be used to avoid or minimize any effects.

These discussions were supported by presentations and where possible, involved the Project's subject matter experts. The Ministry offered to present on any topic of interest to Stzùminus First Nation during this phase including any of the presentations from the May 2015 Environmental Update package (contents detailed in list of materials).

During the Initial Consultation Phase, the Ministry sought Stzùminus First Nation's input on the following EA-related documents:

- Project Description and Key Areas of Study
- Draft Archaeological Overview Assessment
- Draft Archaeological Heritage Resources Assessment
- Draft Aboriginal Consultation Plan
- Draft Application Information Requirements

With the exception of the draft Aboriginal Consultation Plan, the Ministry met with Stzùminus First Nation, represented by Cowichan Nation Alliance, and walked through these draft documents. Focused discussions on these documents were intended to explain the scope and content, to respond to any initial questions and to elicit input.

While early drafts of these documents such as the Project Description and Key Areas of Study and the draft Application Information Requirements were shared during the Initial Consultation Phase, they were provided again in their revised format for further review in the pre-Application Phase.

Meetings with Stzùminus First Nation

Between early 2014 and May 2016, the Ministry and Stzùminus First Nation or Cowichan

Nation Alliance discussed and exchanged Project-related information through emails, phone calls, a community meeting and in-person meetings. Meetings and related activities undertaken with Stzùminus First Nation or Cowichan Nation Alliance in relation to the Project are outlined below.

At meetings with Cowichan Nation Alliance during Initial Consultation, the Ministry provided introductory information regarding the proposed Project scope and Project schedule, and sought input with respect to Stzùminus First Nation's past, current and future use of the Project area for the exercise of identified Aboriginal Interests, and any concerns related to potential impacts on Stzùminus First Nation's Aboriginal Interests. The Ministry also sought to determine C Stzùminus First Nation's preferences with respect to participation in Project consultation, EA review, and related activities. During the initial meetings, communications protocols were established and key contacts were identified and/or confirmed. Stzùminus First Nation confirmed that they would like to receive notifications directly; however, they would be represented by Cowichan Nation Alliance in correspondence, meetings and fieldwork.

In coordinating and conducting meetings with Cowichan Nation Alliance, wherever possible, the Ministry has ensured the following:

- Meetings were held at the preferred location and in the preferred format for Cowichan Nation Alliance.
- Meetings were scheduled at a date and time convenient for Cowichan Nation Alliance and that facilitated the attendance of key representatives.
- Input into the agenda was considered in the planning of the meeting and, where input had not been provided beforehand, the agenda made provisions for additional topics to be discussed.
- Technical and knowledgeable Ministry representatives have been present.
- Materials have been shared beforehand and are provided in a preferred format.
- Meetings have been respectful, productive and consistent with the principles and objectives of the Consultation Plan.

During this period, key topics and presentations covered during meetings with Cowichan Nation Alliance include: Archaeology/Heritage Resources, Wildlife, Marine Use, Fish and Fish Habitat, Traffic, Human Health (air and noise), River Hydraulics and Morphology, Utilities, Green Slough concept, Project Description and Key Areas of Study document, Project Definition Report and the Draft Application Information Requirements.

As outlined in the Project’s Consultation Plan, the Ministry has been committed to sharing Project-related information with Cowichan Nation Alliance members as it becomes available. The Ministry considered the provision of early drafts of key EA documents to Cowichan Nation Alliance members as an opportunity to:

- Acknowledge and respond, in part, to known concerns regarding the high volume of project referrals, challenging timelines for review and limited resources to allocate to EA review processes;
- Meet the objective of sharing Project-related documents in a timely manner with the intent to facilitate Cowichan Nation Alliance members’ review and comment;
- Consider and incorporate input, address concerns and identify gaps in relation to key aspects of the Project (e.g. Valued Components, studies and study area boundaries) prior to the pre-Application Phase; and to
- Allow time for meetings to be coordinated and conducted regarding particular documents or aspect of the Project of interest to Cowichan Nation Alliance members in advance of the pre-Application Phase.

During the Initial Consultation Phase, the Ministry communicated with Cowichan Nation Alliance members through letters, email and phone calls.

Letters sent to Stzùminus First Nation during this consultation Phase include:

- Introductory letters notifying Stzùminus First Nation of the Project and offering to meet regarding the proposed Project;
- Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment letters to Stzùminus First Nation requesting review and comment on the draft Archaeological Overview Assessment.
- Project Description letters to Stzùminus First Nation accompanying a draft copy of the Project Description and Key Areas of Study document requesting review

and comment; and

Email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Stzùminus First Nation;
- Follow up to meetings or earlier communications;
- Provision of Project-related documents, updates and sharing of information;
- Response to concerns or questions in relation to the Project;
- Clarification of information and feedback shared by Stzùminus First Nation; and
- To address and resolve Project-related concerns.

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Stzùminus First Nation;
- Confirmation of information and follow up to previous communications;
- Updates and sharing of information; and
- To address and resolve Project-related concerns.

Aboriginal Consultation Plan – Stzùminus First Nation review and comment

From the beginning of consultation, the Ministry worked with Stzùminus First Nation to develop a mutually acceptable consultation approach, including the manner in which Stzùminus First Nation was to be kept informed about the Project, and the means by which comments (e.g., on the Project, its potential effects and the mitigation measures that may be used to avoid or minimize those effects) were to be communicated and addressed by the Ministry.

The Ministry's Draft Aboriginal Consultation Plan was informed by regulatory and legal requirements, the importance of enhancing or maintaining a positive, respectful and productive working relationship with Stzùminus First Nation, and specific input received during initial GMT consultation meetings with Cowichan Nation Alliance representatives. The Draft Consultation Plan listed consultation activities, agreed to by both parties, and specified under the Stzùminus First Nation's capacity funding agreement.

The Ministry undertook the activities below in order to obtain and, where appropriate, incorporate, input on the Draft Aboriginal Consultation Plan:

- Email request for review and comment with the Draft Aboriginal Consultation Plan provided as an attachment.

- Follow up communications (email and phone calls) to schedule a meeting to discuss the Draft Aboriginal Consultation Plan.
 - Discuss or obtain clarification on any comments provided by Cowichan Nation Alliance representatives to the Ministry.
- Revision of Draft Aboriginal Consultation Plan
- Sharing of Revised Aboriginal Consultation Plan and a summary of responses to Cowichan Nation Alliance's comments/input.
 - Revised Aboriginal Consultation Plan and, for ease of reference, original Draft Aboriginal Plan provided via email.
 - Summary of comments/input provided by Cowichan Nation Alliance and corresponding action taken by the Ministry (i.e. revision to plan, comment "noted", request for further discussion regarding request).

In consideration of the confidential nature of comments provided on the draft Aboriginal Consultation Plan and that specific consultation activities were planned for each Aboriginal group, the Ministry responded directly to both Stzùminus First Nation and Cowichan Nation Alliance regarding their respective comments on the Aboriginal Consultation Plan. Where Aboriginal Groups comments or requests did not result in changes to the Plan, a response was provided, along with an offer to meet to discuss any outstanding concerns or questions. Based on feedback received to date and discussions with Stzùminus First Nation and Cowichan Nation Alliance on this matter, the Ministry is of the understanding that Stzùminus First Nation have no outstanding concerns or comments with respect to the Plan.

Comments were received from Cowichan Nation Alliance on the Draft Aboriginal Consultation Plan via letter, October 30 2015. The Consultation Plan was revised, based on input received from Cowichan Nation Alliance and other Aboriginal Groups, and approved by EAO on April 6, 2016.

Capacity Funding

During Initial Consultation meetings, Stzùminus First Nation identified the need for capacity funding to support Stzùminus First Nation's involvement in Project consultation activities, review of EA-related documents and participation in the pre-Application phase of the EA process. Stzùminus First Nation also identified the need for funding for a Stzùminus First Nation Study. The Ministry and Stzùminus First Nation worked together to finalize a funding agreement. This agreement specifies the activities covered under the agreement and Project/EA-related documents for Stzùminus First Nation's review and comment.

Involvement in Archaeological Component of the Project

From the outset of discussions, Stzùminus First Nation identified the importance of the archaeological component of the Project and of Stzùminus First Nation's involvement in fieldwork and review of draft archaeological documents. All draft archaeological documents were shared with Stzùminus First Nation for review and comment. The Ministry and its archaeologist met with Stzùminus First Nation to present on this aspect of the Project. Cowichan Nation Alliance representatives from Cowichan Tribes, Penelakut Tribe and Stzùminus First Nation participated in all archaeological fieldwork for the Project.

Cowichan Nation Alliance commented on the Draft Heritage Resources Overview Assessment via letter June 25, 2015.

During Initial Consultation Phase, Stzùminus First Nation and Cowichan Nation Alliance provided input on the Project and commented on EA-related documents in meetings, via email, phone and letter.

Documents and formal comments shared with Stzùminus First Nation during this phase include:

- FLNRO Map of Cowichan Nation Alliance Use and Occupancy of the Project Area (Email Feb 11, 2015)
- Comment on Draft Project Description and Key Areas of Study (Letter March 09, 2015)
- Comments on Heritage Resources Overview Assessment (Letter June 25, 2015)
- Comments on Draft Application Information Requirements (Letter August 05, 2015)
- Comments on Draft Aboriginal Consultation Plan (Letter October 30, 2015)
- Salish Sea Vessel Traffic Projections (Email November 19, 2015)

The Ministry provided Stzùminus First Nation with funding for the submission of a Traditional Use Study. The following three studies were submitted to the Ministry:

- Cowichan Nation Traditional, Current, and Planned Future Use of the George Massey Tunnel Replacement Bridge Project Area, prepared by Candace Charlie for Cowichan Tribes, on behalf of the Cowichan Nation Alliance, August 9, 2015
- George Massey Tunnel Replacement Project: Cowichan Occupation and Use of the Project Lands, prepared by Dorothy Kennedy for David Robbins of Woodward and Co., Counsel for the Cowichan Tribes, on behalf of the Cowichan Nation Alliance, August 25, 2015

- Historical Geography of Cowichan Land Use and Occupancy Lower Fraser River: Map Series and Report, prepared for Woodward and Company and the Cowichan Tribes by Kenneth G. Brealey, May 31, 2010

Pre-Application Consultation Phase

The following section outlines consultation activities that the Ministry has undertaken with Stzùminus First Nation during the pre-Application Phase. The approach was developed with input from Stzùminus First Nation and Cowichan Nation Alliance during the Initial Consultation Phase described above and EAO, and is outlined in the Consultation Plan. It is also informed by EAO's Section 11 Order, specifically Part G section 13 and 14, which outlines consultation requirements for the Ministry.

As it pertains to consultation with Stzùminus First Nation, during the pre-Application phase, the Ministry has:

- Provided capacity funding to support continued involvement in Project consultation activities and the regulatory process;
- Provided relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Stzùminus First Nation's Aboriginal Interests;
- Identified and provided, where possible, opportunities for Stzùminus First Nation and Cowichan Nation Alliance to participate in fieldwork (River otter study);
- Identified and documented questions, issues and interests raised by Stzùminus First Nation and Cowichan Nation Alliance;
- Continued to work with Stzùminus First Nation to identify potentially affected Aboriginal Interests;
- Identified measures to avoid, mitigate, or where required accommodate, potential adverse effects on Aboriginal Interests as appropriate; and
- Supported EAO-led Technical Working Group.

Funding for Application Review

The Ministry will work with Stzùminus First Nation with respect to the provision of capacity funding for the Application Review Phase, with the aim of providing reasonable capacity support for participation in the review of the EA and any related permitting processes. Funding is intended to facilitate participation in technical reviews and analyses, for involvement in ongoing consultation activities (as specified in the Consultation Plan), to support Stzùminus First Nation in presenting information regarding their Aboriginal Interests and to ensure the consultation requirements pursuant to the

Section 11 Order are met and the Consultation Plan is implemented as intended. The Ministry will work with Stzùminus First Nation in an effort to finalize a funding agreement for the Application Review phase.

Consultation on EA-related documents

During this phase, the Ministry consulted Stzùminus First Nation on the following Project-related documents:

- Draft Project Description and Key Areas of Study (Project Description);
- Draft Application Information Requirements;
- Content of draft Part C of the Environmental Assessment Application; and
- Draft Consultation Report 1

The Ministry provided draft Part C content and mapping to Stzùminus First Nation for review and comment by letters/emails (April 18, 2016). Cowichan Nation Alliance provided comments on this draft via a letter/email (May 05, 2016) along with the Cowichan Nation Alliance Declaration (signed Jan 2016) and Schedule A and B maps.

In letters/emails of April 22, 2016, the Ministry provided draft Consultation Report 1 to Stzùminus First Nation for review and comment prior to finalization and submission to EAO. Stzùminus First Nation and Cowichan Nation Alliance reviewed the draft and Cowichan Nation Alliance advised that they had no comments or requested changes (email May 05, 2015).

During the pre-Application Phase, documents/information shared by Stzùminus First Nation includes:

- Environment Canada's Streambank Lupine information (Email March 31, 2016)
- Steveston Diking Referral Part1 & 2 (Email March 16, 2016)
- Cowichan Nation Alliance Strength of Claim Assessment – Aboriginal Right to Fish for Food in the South Arm of the Fraser River (Email April 15 2016)
- List of Place Name (Working Group, March 10, 2016)

Cowichan Nation Alliance participated in the Working Group and commented on the Draft Application Information Requirements. The Ministry responded to the Working Group on comments received in relation to the dAIR.

Participation in Fieldwork

In April 2016, Stzùminus First Nation and Cowichan Nation Alliance were invited to participate in river otter-related fieldwork. The objectives of this work were to document river otter relative abundance within the Regional Assessment Area, document and

describe use of riparian areas, identify high use areas, and potential areas and options for mitigation. A Cowichan Nation Alliance representative from Stzùminus First Nation participated in this work.

Materials shared with Stzùminus First Nation during the pre-Application Phase are outlined below:

| Document | Description |
|---|---|
| Project Description and Key Areas of Study (Project Description) | Document prepared according to guidance provided in EAO's <i>Guidelines for Preparing a Project Description for an Environmental Assessment in British Columbia</i> (EAO 2013). |
| Draft Application Information Requirements | The Working Group review of the draft Application Information Requirements (dAIR) commenced on January 6, 2016 . The dAIR outlines the studies, methods and information required for the Application for an Environmental Assessment Certificate. |
| Draft Application Information Requirements Presentation (December 2015) | Discussions of how comments received on first draft Application Information Requirements document were integrated into the next revised version. |
| Application Information Requirements | Final version of the document was issued on May 24, 2016. |
| Aboriginal Consultation Plan (April 2016) | Final version of Aboriginal Consultation Plan that incorporated input received from Aboriginal Groups and EAO. |
| List of Project-related documents on the GMT Project website | A list of Project-related documents available in the Project document library on the Project website. |
| Health Impact Assessment (HIA) scoping document | Document outlining scope of the HIA and input being sought from Aboriginal groups/Working Group members. |
| Draft Part C content | Draft components of Part C for review and comment by Schedule B Aboriginal groups: baseline summaries and mapping. |
| Aboriginal Consultation Report 1 | Draft summary of general consultation undertaken to date on the Project. For review and comment. |
| Aboriginal Consultation Report 2 | Draft report with Aboriginal Group-specific information on consultation undertaken to date on the Project. For review and comment. |

Meetings with Stz'uminus First Nation – pre-Application Phase

During the pre-Application Phase, the Ministry met three times with Cowichan Nation Alliance (see list of meetings for details) and conducted a conference call in relation to Cowichan Nation Alliance' interest in the procurement process and Project-related benefits and to discuss comments on the draft Part C content and Aboriginal Consultation Report 1.

Cowichan Nation Alliance attended two EAO-led Working Group meetings and communicated directly with EAO with respect to the EA process. Halalt represented Cowichan Nation Alliance at the first Working Group meeting. Halalt First Nations and Cowichan Tribes represented Cowichan Nation Alliance at the second Working Group meeting. The EAO-led Working Group meetings focused on the following:

- Working Group Meeting (January 21, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - Project overview and update
 - Key Areas of Study
 - dAIR Overview
 - Preliminary conclusions from study results to date
- Working Group Meeting (March 10, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - List of materials available on Project website
 - Review of comments received on dAIR and resulting changes to the dAIR
 - Description and rationale of assessment areas

Cowichan Nation Alliance was offered and provided with two separate Working Group meetings which took place following EAO-led Working Group meetings. These were attended by Cowichan Tribes, Halalt First Nation, Penelakut Tribe and Stz'uminus First Nation.

Communications Methods

During the pre-Application Phase, email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Stz'uminus First Nation and Cowichan Nation Alliance

- Follow up to meetings or earlier communications
- Provision of Project-related documents, updates and sharing of information
- Response to concerns or questions in relation to the Project
- Clarification of information and feedback shared by Stzùminus First Nation and Cowichan Nation Alliance
- To address and resolve Project-related concerns

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Stzùminus First Nation and Cowichan Nation Alliance
- Confirmation of information and follow up to previous communications
- Updates and sharing of information
- To address and resolve Project-related concerns

Documents for review were shared via email, in letter format and via mail/courier. Letters sent to Stzùminus First Nation during this Phase include:

- Letter requesting review of Draft Part C content
- Letter requesting review of Draft Aboriginal Consultation Report 1
- Letter requesting review of Draft Aboriginal Consultation Report 2

Consultation on Aboriginal Consultation Report 2

Pursuant to the Section 11 Order, a draft version of this report was shared with Stzùminus First Nation for review and comment.

Stzùminus First Nation provided feedback on Aboriginal Consultation Report 2 via a Cowichan Nation Alliance letter of June 22, 2016, noting an error on page 159 that needed to be addressed in the revised document and requesting the table of meetings (pages 151-154) be modified to provide greater clarity with respect to meeting attendees. Aboriginal Consultation Report 2 has been revised to reflect this input.

Stzùminus First Nation will be provided with a final copy of Aboriginal Consultation Report 2 along with an explanation of how their input has been considered and reflected in the final Aboriginal Consultation Report 2.

Concerns, Issues and Interests Raised by Cowichan Nation Alliance

Consultation efforts to date, have sought to identify and address concerns and issues raised by Stzùminus First Nation and Cowichan Nation Alliance during the Initial

Consultation and pre-Application Phases. The Ministry requested Stzùminus First Nation`s input on Appendix A: Key Issues and Concerns to both Aboriginal Consultation Reports to ensure that issues and concerns have been accurately and appropriately captured. Aboriginal Consultation Report 2`s Appendix A has been revised to reflect input received to date and to include status and next steps. This table is also included in Part C as Appendix M2.

2.14 Summary of Consultation Activities with Tsawwassen First Nation

The following section summarizes consultation undertaken with the Tsawwassen First Nation during the Initial Consultation and the pre-Application Phases of the Project. This content reflects efforts taken to consult with TSAWWASSEN and of the issues, concerns and interests raised to date. The Ministry considered TSAWWASSEN`s input on the draft of this Consultation Report, and revised content where appropriate, and will share a final version of the Consultation Report with TSAWWASSEN.

Initial Consultation Phase

The Ministry initiated consultation with Tsawwassen First Nation in late 2012. In support of consultation during the Initial Consultation Phase the following Ministry-led activities have been undertaken with TSAWWASSEN:

- Meetings with Tsawwassen First Nation Chief and Council, staff and consultants;
- Community meeting
- Site visit;
- Sharing of Project-related materials;
- Sharing of draft documents for review and comment;
- Provision of capacity funding to support participation in consultation activities, review of documents, and submission of a Tsawwassen First Nation Project Impact Study.

During initial discussions with Tsawwassen First Nation, and as demonstrated in the Consultation Plan and Tsawwassen First Nation/George Massey Tunnel Replacement Project Funding Agreement, the Ministry sought input in the development of a consultation approach, and later a Consultation Plan, specific to TSAWWASSEN.

In addition to meetings with TSAWWASSEN representatives during the Initial Consultation Phase, TSAWWASSEN participated in a site visit which focused on key Project components, mutual sharing of information, plans for Tunnel decommissioning, the Deas Slough Bridge, and Deas Island, as well as anticipated works and enhancement opportunities for Green Slough.

In December 2014, the Ministry conducted a TSAWWASSEN community meeting. The Ministry presented on various aspects of the Project including the scope and key components, schedule and proposed studies. The presentation was followed by a question and answer period where attendees could ask questions, identify concerns and obtain additional information on various aspects of the Project. EAO was in attendance and responded to questions related to EAO's regulatory process.

Consultation activities during this period were focused on, among other things, the Project scope and schedule, proposed Studies/Valued Components, and identification of potential impacts on TSAWWASSEN's Aboriginal Interests and mitigation measures that may be used to avoid or minimize any effects.

These discussions were supported by presentations and where possible, involved the Project's subject matter experts. The Ministry offered to present on any topic of interest to TSAWWASSEN during this phase including any of the presentations from the May 2015 Environmental Update package (contents detailed in list of materials).

During the Initial Consultation Phase, the Ministry sought Tsawwassen's input on the following EA-related documents:

- Project Description and Key Areas of Study
- Draft Archaeological Overview Assessment
- Draft Archaeological Heritage Resources Assessment
- Draft Aboriginal Consultation Plan
- Draft Application Information Requirements

With the exception of the Draft Aboriginal Consultation Plan, the Ministry met with Tsawwassen and walked through the above- listed draft documents, in an effort to explain the scope and content, to respond to any initial questions and to elicit input.

While documents such as the Project Description and Key Areas of Study and the draft Application Information Requirements were shared during the Initial Consultation Phase, they were also provided to TSAWWASSEN again in their revised format for further review in the pre-Application Phase.

Meetings with Tsawwassen

Between late 2012 and May 2016, the Ministry and the Tsawwassen First Nation discussed and exchanged Project-related information through emails, phone calls, a community meeting and in-person meetings. Meetings and related activities undertaken with Tsawwassen First Nation in relation to the Project are outlined below.

At meetings with Tsawwassen First Nation during Initial Consultation, the Ministry

provided introductory information regarding the proposed Project scope and Project schedule, and sought input with respect to Tsawwassen’s use of the Project area for the exercise of treaty rights, Tsawwassen’s future desired use, and any concerns related to potential impacts on Tsawwassen’s Treaty Rights. The Ministry also sought to determine Tsawwassen’s preferences with respect to participation in Project consultation, EA review, and related activities. During the initial meetings, communications protocols were established and key contacts were identified and/or confirmed.

In coordinating and conducting meetings with Tsawwassen, wherever possible, the Ministry has ensured the following:

- Meetings were held at the preferred location and in the preferred format for Tsawwassen.
- Meetings were scheduled at a date and time convenient for Tsawwassen and that facilitated the attendance of key representatives.
- Input into the agenda was considered in the planning of the meeting and, where input had not been provided beforehand, the agenda made provisions for additional topics to be discussed.
- Technical and knowledgeable Ministry representatives have been present.
- Materials have been shared beforehand and are provided in a preferred format.
- Meetings have been respectful, productive and consistent with the principles and objectives of the Consultation Plan.

During this period, key topics and presentations covered during meetings with Tsawwassen include: Archaeology/Heritage Resources, Wildlife, Marine Use, Fish and Fish Habitat, Traffic, Human Health (air and noise), River Hydraulics and Morphology, Utilities, Green Slough concept, Project Description and Key Areas of Study document, Project Definition Report and the Draft Application Information Requirements.

As outlined in the Consultation Plan, the Ministry has been committed to sharing Project-related information with Tsawwassen First Nation as it becomes available. The Ministry considered the provision of early drafts of key EA documents to Tsawwassen as an opportunity to:

- Acknowledge and respond, in part, to known concerns regarding the high volume of project referrals, challenging timelines for review and limited resources to allocate to EA review processes;
- Meet the objective of sharing Project-related documents in a timely manner with the intent to facilitate Tsawwassen First Nation's' review and comment;
- Consider and incorporate input, address concerns and identify gaps in relation to key aspects of the Project (e.g. Valued Components, studies and study area boundaries) prior to the pre-Application Phase; and to
- Allow time for meetings to be coordinated and conducted regarding particular documents or aspect of the Project of interest to Tsawwassen in advance of the pre-Application Phase.

While early drafts of these documents such as the Project Description and Key Areas of Study and the draft Application Information Requirements were shared during the Initial Consultation Phase, they were provided again in their revised format for further review in the pre-Application Phase.

During the Initial Consultation Phase, the Ministry communicated with Tsawwassen First Nation through letters, email and phone calls.

Letters sent to Tsawwassen during the Initial Consultation Phase include:

- Introductory letter notifying Tsawwassen First Nation of the Project and offering to meet regarding the proposed Project;
- Project Description letter accompanying a draft copy of the Project Description and Areas of Study document requesting review and comment; and
- Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment letter requesting review and comment on the Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment (document also provided).

Email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Tsawwassen First Nation representatives;
- Follow up to meetings or earlier communications;

- Provision of Project-related documents, updates and sharing of information;
- Response to concerns or questions in relation to the Project;
- Clarification of information and feedback shared by Tsawwassen; and
- To address and resolve Project-related concerns.

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Tsawwassen First Nation;
- Confirmation of information and follow up to previous communications;
- Updates and sharing of information; and
- To address and resolve Project-related concerns.

Project-related documents and materials used during consultation are listed in Aboriginal Consultation Report 1.

Aboriginal Consultation Plan – Tsawwassen Review and Comment

From the beginning of consultation, the Ministry worked with Tsawwassen to develop a mutually acceptable consultation approach, including the manner in which Tsawwassen was to be kept informed about the Project, and the means by which comments (e.g., on the Project, its potential effects and the mitigation measures that may be used to avoid or minimize those effects) were to be communicated and addressed by the Ministry.

The Consultation Plan was informed by regulatory and legal requirements, the importance of enhancing or maintaining a positive, respectful and productive working relationship with Tsawwassen First Nation, an established working relationship with Tsawwassen, and specific input received during initial consultation meetings with Tsawwassen. The Consultation Plan lists consultation activities, agreed to by both parties, and specified under the Tsawwassen/GMT capacity funding agreement.

The Ministry undertook the activities below in order to obtain and, where appropriate, incorporate, input on the Consultation Plan:

- Email request for review and comment on a draft of the Consultation Plan provided as an attachment.
- Follow up communications (email and phone calls) to schedule a meeting to discuss the Draft Aboriginal Consultation Plan.
 - Discuss or obtain clarification on any comments provided by Tsawwassen to the Ministry.

- Revision of draft Consultation Plan
- Sharing of Consultation Plan and a summary of responses to Tsawwassen’s comments/input.
 - Revised Consultation Plan and, for ease of reference, the original draft of the Consultation Plan provided via email
 - Summary of comments/input provided by Tsawwassen and corresponding action taken by the Ministry (i.e. revision to plan, comment “noted”, request for further discussion regarding request)

In consideration of the confidential nature of comments provided on the draft Aboriginal Consultation Plan and that specific consultation activities were planned for each Aboriginal group, the Ministry responded directly to each group regarding their respective comments on the Aboriginal Consultation Plan. Where Aboriginal Groups comments or requests did not result in changes to the Plan, a response was provided, along with an offer to meet to discuss any outstanding concerns or questions. Tsawwassen requested one change to the Plan and the Ministry made the requested revision. Based on feedback received to date, the Ministry is of the understanding that Tsawwassen First Nation has no outstanding concerns or comments with respect to the Plan.

Capacity Funding

During Initial Consultation meetings, Tsawwassen N identified the need for capacity funding to support Tsawwassen’s involvement in Project consultation activities, review of EA-related documents and participation in the pre-Application phase of the EA process. Tsawwassen First Nation also identified the need for funding for a Tsawwassen First Nation Project Impact Study. The Ministry and Tsawwassen worked together to finalize a funding agreement. The agreement specifies the activities covered under the agreement and Project/EA-related documents for Tsawwassen’s review and comment.

Involvement in the Archaeological Component of the Project

From the outset of discussions, Tsawwassen First Nation identified the importance of the archaeological component of the Project and of Tsawwassen’s involvement in fieldwork and review of draft archaeological documents. All draft archaeological documents were shared with Tsawwassen First Nation for review and comment, and the Ministry, and its archaeologist met with Tsawwassen First Nation to present on this aspect of the Project. Tsawwassen First Nation has participated in all archaeological fieldwork for the Project.

Pre-Application Phase Consultation

The following section outlines consultation activities that the Ministry has undertaken with Tsawwassen First Nation during the pre-Application Phase. The approach was developed

with input from Tsawwassen during the Initial Consultation Phase described above and EAO, and is outlined in the Consultation Plan. It is also informed by EAO's Section 11 Order, specifically Part G section 13 and 14, which outlines consultation requirements for the Ministry.

As it pertains to consultation with Tsawwassen, during the pre-Application phase, the Ministry has:

- Provided capacity funding to support continued involvement in Project consultation activities and the regulatory process;
- Provided all relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Tsawwassen First Nation's Aboriginal Interests;
- Identified and provided, where possible, opportunities for Tsawwassen to participate in fieldwork (River otter study);
- Identified and documented questions, issues and interests raised by Tsawwassen First Nation;
- Continued to work with Tsawwassen with respect to the potential for the Project to affect Tsawwassen treaty rights;
- Identified measures to avoid, mitigate, or where required accommodate, potential adverse effects on Aboriginal Interests as appropriate; and
- Supported EAO-led Technical Working Group.

Funding for Application Review

The Ministry will work with Tsawwassen First Nation with respect to the provision of capacity funding for the Application Review Phase, with the aim of providing reasonable capacity support for participation in the review of the EA and any related permitting processes. Funding is intended to facilitate participation in technical reviews and analyses, for involvement in ongoing consultation activities (as specified in the Consultation Plan), to support Tsawwassen in presenting information regarding their respective Aboriginal Interests and to ensure the consultation requirements pursuant to the Section 11 Order are met and the Consultation Plan is implemented as intended. The Ministry will work with Tsawwassen First Nation in an effort to finalize a funding agreement for the Application Review phase.

Consultation on EA-related documents:

During this phase, the Ministry consulted Tsawwassen on the following Project-related documents:

- Draft Project Description and Key Areas of Study document);
- Draft Application Information Requirements;
- Content of draft Part C of the Environmental Assessment Application
- Draft Consultation Report 1

Draft Consultation Report 2 was also provided to Tsawwassen for review and comment. Where appropriate, revisions to draft Report 2 will be made based on input received from Tsawwassen and other Aboriginal Groups.

Consultation on Aboriginal Consultation Report 1

The Ministry provided draft Consultation Report 1 to Tsawwassen for review and comment prior to finalization and submission to EAO, indicating that feedback received by May 2, 2106 would be incorporated into the final version as appropriate. Tsawwassen reviewed and had no comments on the Consultation Report.

Participation in Fieldwork

In April 2016, Tsawwassen First Nation was invited to participate in river otter-related fieldwork. The objectives of this work were to document river otter relative abundance within the Regional Assessment Area, document and describe use of riparian areas; identify high use areas, and potential areas and options for mitigation. Tsawwassen did not participate in the fieldwork.

Materials shared with Tsawwassen First Nation during the pre-Application Phase are outlined below:

| Document | Description |
|---|---|
| Project Description and Key Areas of Study (Project Description) | Document prepared according to guidance provided in EAO's <i>Guidelines for Preparing a Project Description for an Environmental Assessment in British Columbia</i> (EAO 2013). |
| Draft Application Information Requirements | The Working Group review of the draft Application Information Requirements (dAIR) commenced on January 6, 2016 . The dAIR outlines the studies, methods and information required for the Application for an Environmental Assessment Certificate. |
| Draft Application Information Requirements Presentation (December 2015) | Discussion of how comments received on first draft Application Information Requirements document were integrated into the next revised version. |
| Application Information Requirements | Final version of the document was issued on May 24, 2016. |

| Document | Description |
|---|---|
| Aboriginal Consultation Plan (April 2016) | Final version of Aboriginal Consultation Plan that incorporated input received from Aboriginal Groups and EAO. |
| Draft Part C content | Draft components of Part C for review and comment by Schedule B Aboriginal groups: baseline summaries and mapping. |
| Aboriginal Consultation Report 1 | Draft summary of general consultation undertaken to date on the Project. For review and comment. |
| Aboriginal Consultation Report 2 | Draft summary with more detailed information of consultation undertaken to date on the Project. For review and comment. |

Meetings with Tsawwassen

During the pre-Application Phase, the Ministry met three times with Tsawwassen First Nation. One of these meetings included a review of information shared at Working Group 2, a Project update, and a discussion regarding GMT procurement. Other meetings focused on procurement and Project design, and on a review of Aboriginal Consultation Report 1 and Draft Part C Content. The Ministry also presented to Tsawwassen’s Natural Resources Committee on the Project’s Fish and Fish Habitat Assessment (see list of meetings for details).

Tsawwassen First Nation attended one EAO-led Working Group meeting and engaged directly with EAO with respect to the EA process. The Ministry and EAO met with Tsawwassen to review key aspects of the 2nd Working Group meeting that Tsawwassen could not attend. The EAO-led Working Group meetings focused on the following:

- Working Group Meeting (January 21, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - Project overview and update
 - Key Areas of Study
 - dAIR Overview
 - Preliminary conclusions from study results to date
- Working Group Meeting (March 10, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - List of materials available on Project website

- Review of comments received on dAIR and resulting changes to the dAIR
- Description and rationale of assessment areas

Communications Methods

During the pre-Application Phase, email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Tsawwassen First Nation representatives
- Follow up to meetings or earlier communications
- Provision of Project-related documents, updates and sharing of information
- Response to concerns or questions in relation to the Project
- Clarification of information and feedback shared by Tsawwassen First Nation
- To address and resolve Project-related concerns

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Tsawwassen First Nation
- Confirmation of information and follow up to previous communications
- Updates and sharing of information
- To address and resolve Project-related concerns

Documents for review were shared via email, in letter format and via mail/courier. Letters sent to Tsawwassen during this Phase include:

- Letter requesting review of Draft Part C content
- Letter requesting review of Draft Aboriginal Consultation Report 1
- Letter requesting review of Draft Aboriginal Consultation Report 2

Tsawwassen reviewed Draft Part C content and indicated that they had no concerns with the draft document and made no requests for changes.

Consultation on Aboriginal Consultation Report 2

Pursuant to the Section 11 Order, a draft version of this report was shared with Tsawwassen for review and comment. Tsawwassen reviewed Report 2 and indicated that they had no concerns or comments with respect to the document.

Tsawwassen will be provided with a final copy of Consultation Report 2.

Concerns, Issues and Interests Raised by Tsawwassen First Nation

Consultation efforts to date, have sought to identify and address concerns and issues raised by Tsawwassen during the Initial Consultation and pre-Application Phases. The Ministry has requested Tsawwassen's input on a table accompanying both Aboriginal Consultation Reports to ensure that issues and concerns have been accurately and appropriately captured. Tsawwassen's concerns, issues and interests are outlined in Appendix A and Part C Appendix N2 and reflect any input received to date.

2.15 Summary of Consultation Activities with Tsleil-Waututh First Nation

The following section summarizes consultation undertaken with the Tsleil-Waututh Nation (Tsleil-Waututh) during the Initial Consultation and the pre-Application Phases of the Project. This content reflects efforts taken to consult with Tsleil-Waututh and of the issues, concerns and interests raised to date. The Ministry will consider Tsleil-Waututh Nation's input on this draft, will revise content where appropriate, and will share a final version of the Consultation Report with Tsleil-Waututh.

Initial Consultation Phase

The Ministry initiated consultation with Tsleil-Waututh Nation in early 2014. To date, two phases of consultation have been completed: Initial Consultation Phase and the pre-Application Phase. In support of consultation, the following Ministry-led activities have been undertaken with Tsleil-Waututh Nation during these phases:

- Meetings with Tsleil-Waututh Nation staff and consultants;
- Site visit;
- Sharing of Project-related materials;
- Sharing of draft documents for review and comment;
- Provision of capacity funding to support participation in consultation activities, review of documents, and submission of a Tsleil-Waututh Nation Knowledge Study.

During initial discussions with Tsleil-Waututh Nation, and as demonstrated in the Consultation Plan and Tsleil-Waututh Nation/George Massey Tunnel Replacement Project Funding Agreement, the Ministry sought input in the development of a consultation approach, and later a Consultation Plan, specific to Tsleil-Waututh.

In addition to meetings with Tsleil-Waututh representatives during the Initial Consultation Phase, Tsleil-Waututh participated in a site visit which focused on key Project components, mutual sharing of information, plans for Tunnel decommissioning, the Deas

Slough Bridge, and Deas Island, as well as anticipated works and enhancement opportunities for Green Slough.

Consultation activities during this period were focused on, among other things, the Project scope and schedule, proposed Studies/Valued Components, and identification of potential impacts on Tsleil-Waututh's Aboriginal Interests and mitigation measures that may be used to avoid or minimize any effects.

These discussions were supported by presentations and where possible, involved the Project's subject matter experts. The Ministry offered to present on any topic of interest to Tsleil-Waututh during this phase including any of the presentations from the May 2015 Environmental Update package (contents detailed in list of materials).

During the Initial Consultation Phase, the Ministry sought Tsleil-Waututh's input on the following EA-related documents:

- Project Description and Key Areas of Study
- Draft Archaeological Overview Assessment
- Draft Archaeological Heritage Resources Assessment
- Draft Aboriginal Consultation Plan
- Draft Application Information Requirements

The Ministry met with Tsleil-Waututh and walked through the Project Description and Key Areas of Study and Draft Application Information Requirements documents, in an effort to explain the scope and content, to respond to any initial questions and to elicit input Tsleil-Waututh comments on draft EA documents shared during this Phase.

While early drafts of these documents such as the Project Description and Key Areas of Study and the draft Application Information Requirements were shared during the Initial Consultation Phase, they were provided again in their revised format for further review in the pre-Application Phase.

Meetings with Tsleil-Waututh

Between early 2014 and May 2016, the Ministry and the Tsleil-Waututh Nation discussed and exchanged Project-related information through emails, phone calls, and meetings. Meetings and related activities undertaken with Tsleil-Waututh Nation in relation to the Project are outlined below.

At meetings with Tsleil-Waututh Nation during Initial Consultation, the Ministry provided introductory information regarding the proposed Project scope and Project schedule, and sought input with respect to Tsleil-Waututh's past, current and future use of the Project area for the exercise of identified Aboriginal Interests, and any concerns related to

potential impacts on Tsleil-Waututh’s Aboriginal Interests. The Ministry also sought to determine Tsleil-Waututh’s preferences with respect to participation in Project consultation, EA review, and related activities. During the initial meetings, communications protocols were established and key contacts were identified and/or confirmed.

In coordinating and conducting meetings with Tsleil-Waututh, wherever possible, the Ministry has ensured the following:

- Meetings were held at the preferred location and in the preferred format for Tsleil-Waututh.
- Meetings were scheduled at a date and time convenient for Tsleil-Waututh and that facilitated the attendance of key representatives.
- Input into the agenda was considered in the planning of the meeting and, where input had not been provided beforehand, the agenda made provisions for additional topics to be discussed.
- Technical and knowledgeable Ministry representatives have been present.
- Materials have been shared beforehand and are provided in a preferred format.
- Meetings have been respectful, productive and consistent with the principles and objectives of the Consultation Plan.

During this period, key topics and presentations covered during meetings with Tsleil-Waututh include: Archaeology/Heritage Resources, Wildlife, Marine Use, Fish and Fish Habitat, Traffic, Human Health (air and noise), River Hydraulics and Morphology, Utilities, Green Slough concept, Project Description and Key Areas of Study document, Project Definition Report and the Draft Application Information Requirements.

As outlined in the Project’s Consultation Plan, the Ministry has been committed to sharing Project-related information with Tsleil-Waututh Nation as it becomes available. The Ministry considered the provision of early drafts of key EA documents to Tsleil-Waututh as an opportunity to:

- Acknowledge and respond, in part, to known concerns regarding the high volume of project referrals, challenging timelines for review and limited resources to allocate to EA review processes;
- Meet the objective of sharing Project-related documents in a timely manner with the intent to facilitate Tsleil-Waututh Nation’s’ review and comment;
- Consider and incorporate input, address concerns and identify gaps in relation to key aspects of the Project (e.g. Valued Components, studies and study area boundaries) prior to the pre-Application Phase; and to
- Allow time for meetings to be coordinated and conducted regarding particular documents or aspect of the Project of interest to Tsleil-Waututh in advance of the pre-Application Phase.

During the Initial Consultation Phase, the Ministry communicated with Tsleil-Waututh Nation through letters, email and phone calls.

Letters sent to Tsleil-Waututh during this consultation Phase include:

- Introductory letter notifying Tsleil-Waututh Nation of the Project and offering to meet regarding the proposed Project;
- Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment letter requesting review and comment on the Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment (document also provided).
- Project Description letter accompanying a draft copy of the Project Description and Areas of Study document requesting review and comment

Email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Tsleil-Waututh Nation representatives;
- Follow up to meetings or earlier communications;
- Provision of Project-related documents, updates and sharing of information;
- Response to concerns or questions in relation to the Project;
- Clarification of information and feedback shared by Tsleil-Waututh; and
- To address and resolve Project-related concerns.

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Tsleil-Waututh Nation;
- Confirmation of information and follow up to previous communications;
- Updates and sharing of information; and
- To address and resolve Project-related concerns.

Project-related documents and materials used during consultation are listed in Aboriginal Consultation Report 1.

Aboriginal Consultation Plan – Tsleil-Waututh review and comment

From the beginning of consultation, the Ministry worked with Tsleil-Waututh to develop a mutually acceptable consultation approach, including the manner in which Tsleil-Waututh was to be kept informed about the Project, and the means by which comments (e.g., on the Project, its potential effects and the mitigation measures that may be used

to avoid or minimize those effects) were to be communicated and addressed by the Ministry. Tsleil-Waututh provided the Ministry with the Tsleil-Waututh Stewardship Policy (2009) which outlines Tsleil-Waututh's expectations and requirements with respect to consultation.

The Ministry's Draft Aboriginal Consultation Plan was informed by regulatory and legal requirements, the importance of enhancing or maintaining a positive, respectful and productive working relationship with Tsleil-Waututh Nation, consideration of the Tsleil-Waututh Stewardship Policy, an established working relationship with Tsleil-Waututh, and specific input received during initial GMT consultation meetings with Tsleil-Waututh.

The Draft Consultation Plan listed consultation activities, agreed to by both parties, and specified under the Tsleil-Waututh/GMT participation funding agreement.

The Ministry undertook the activities below in order to obtain and, where appropriate, incorporate, input on the Draft Aboriginal Consultation Plan:

- Email request for review and comment with the Draft Aboriginal Consultation Plan provided as an attachment.
- Follow up communications (email and phone calls) to schedule a meeting to discuss the Draft Aboriginal Consultation Plan.
 - Discuss or obtain clarification on any comments provided by Tsleil-Waututh to the Ministry.
- Revision of Draft Aboriginal Consultation Plan
- Sharing of Revised Aboriginal Consultation Plan and a summary of responses to Tsleil-Waututh's comments/input.
 - Revised Aboriginal Consultation Plan and, for ease of reference, original Draft Aboriginal Plan provided via email
 - Summary of comments/input provided by Tsleil-Waututh and corresponding action taken by the Ministry (i.e. revision to plan, comment "noted", request for further discussion regarding request)

Comments were received from Tsleil-Waututh on the draft Consultation Plan on November 16, 2015 via letter/email. The Ministry responded to Tsleil-Waututh's comments, explaining how input had been considered and discussed any outstanding concerns or questions. Based on feedback received to date and discussions with Tsleil-Waututh on this matter, the Ministry is of the understanding that Tsleil-Waututh Nation has no outstanding concerns or comments with respect to the Plan. In consideration of the confidential nature of comments provided on the draft Aboriginal Consultation Plan and that specific consultation activities were planned for each Aboriginal group, the Ministry responded directly to each group regarding their respective comments on the

Aboriginal Consultation Plan.

The Consultation Plan was revised, based on input received from Tsleil-Waututh Nation and other Aboriginal Groups, and approved by EAO on April 6, 2016.

Capacity Funding

During Initial Consultation meetings, Tsleil-Waututh identified the need for capacity funding to support Tsleil-Waututh's involvement in Project consultation activities, review of EA-related documents and participation in the pre-Application phase of the EA process. Tsleil-Waututh Nation also identified the need for funding for a Tsleil-Waututh Nation Knowledge Study. The Ministry and Tsleil-Waututh worked together to finalize a funding agreement. The agreement specifies the activities covered under the agreement and Project/EA-related documents for Tsleil-Waututh's review and comment.

Involvement in Archaeological Component of the Project

From the outset of discussions, Tsleil-Waututh Nation identified the importance of the archaeological component of the Project and of Tsleil-Waututh's involvement in fieldwork and review of draft archaeological documents. All draft archaeological documents were shared with Tsleil-Waututh Nation for review and comment. The Ministry, and its archaeologist offered to meet with Tsleil-Waututh Nation to present on this aspect of the Project. Tsleil-Waututh Nation has participated in archaeological fieldwork for the Project.

Tsleil-Waututh Nation provided comments on the Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment (Letter/email October 27, 2014).

Documents/information shared by Tsleil-Waututh

During the Initial Consultation Phase Tsleil-Waututh submitted the following documents to the Ministry:

- Letter/email (October 27, 2014) Comments on the Draft Archaeological Overview Assessment
- Email (December 04, 2014) Tsleil-Waututh Stewardship Policy
- Letter/email (2014-12-05) Comments on Draft Project Description and Key Areas of Study
- Letter/email (November 16, 2015) comments on draft Aboriginal Consultation Plan

The Ministry provided Tsleil-Waututh with funding for the submission of a Project-related study and received the Tsleil-Waututh Knowledge Study for the George Massey Tunnel Project during the Initial Consultation Phase.

Pre-Application Phase Consultation

The following section outlines consultation activities that the Ministry has undertaken with Tseil-Waututh Nation during the pre-Application Phase. The approach was developed with input from Tseil-Waututh during the Initial Consultation Phase described above and EAO, and is outlined in the Consultation Plan. It is also informed by EAO's Section 11 Order, specifically Part G section 13 and 14, which outlines consultation requirements for the Ministry.

With respect to consultation with TSLEIL-WAUTUTH during the pre-Application phase, the Ministry has:

- Provided capacity funding to support continued involvement in Project consultation activities and the regulatory process;
- Provided relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Tseil-Waututh Nation's Aboriginal Interests;
- Identified and provided, where possible, opportunities for Tseil-Waututh to participate in fieldwork (i.e. River otter study);
- Identified and documented questions, issues and interests raised by Tseil-Waututh Nation;
- Continued to work with TSLEIL-WAUTUTH to identify potentially affected Aboriginal Interests;
- Identified measures to avoid, mitigate, or where required accommodate, potential adverse effects on Aboriginal Interests as appropriate;
- Supported participation in EAO-led Technical Working Group; and
- Committed to continued discussion with respect to non-economic Project-related benefits, including environmental and social benefits.

Funding for Application Review

The Ministry will work with Tseil-Waututh Nation with respect to the provision of capacity funding for the Application Review Phase, with the aim of providing reasonable capacity support for participation in the review of the EA and any related permitting processes. Funding is intended to facilitate participation in technical reviews and analyses, for involvement in ongoing consultation activities (as specified in the Consultation Plan), to support Tseil-Waututh in presenting information regarding their respective Aboriginal Interests and to ensure the consultation requirements pursuant to the Section 11 Order are met and the Consultation Plan is implemented as intended. The Ministry will work with Tseil-Waututh Nation in an effort to finalize a funding agreement for the Application

Review phase.

Consultation on EA-related documents

During this phase, the Ministry consulted Tsleil-Waututh on the following Project-related documents:

- Draft Project Description and Key Areas of Study (Project Description);
- Draft Application Information Requirements;
- Content of draft Part C of the Environmental Assessment Application; and
- Draft Consultation Report 1.

Draft Consultation Report 2 was also provided to TSLEIL-WAUTUTH for review and comment.

Consultation on Aboriginal Consultation Report 1

The Ministry provided draft Aboriginal Consultation Report 1 to Tsleil-Waututh for review and comment prior to finalization and submission to EAO. Tsleil-Waututh provided comments on the draft Aboriginal Consultation Report 1 (letter/email May 06, 2016). Tsleil-Waututh requested that non-economic benefits categories (environmental and social) be included in the revised report and that the Ministry acknowledge ongoing discussions with Tsleil-Waututh in this regard. The requested change was made to draft Aboriginal Consultation Report 1 and carried over to Aboriginal Consultation Report 2 and Part C of the Application.

Tsleil-Waututh also commented that it is burdensome to review two Aboriginal Consultation Reports within a two month period.. Tsleil-Waututh indicated a preference to receive both Aboriginal Consultation Report 1 which provided a general overview of consultation activities and Aboriginal Consultation Report 2 which outlined specifics for each Aboriginal Group together for review and comment to ensure that the paraphrasing of Tsleil-Waututh's concerns had not allowed for any misunderstandings and to provide greater confidence with generalized statements.

Tsleil-Waututh also identified concerns or comments that were not captured in Appendix A: Key Issues and Concerns. The Ministry revised Appendix A to reflect these concerns.

Participation in fieldwork

In April 2016, Tsleil-Waututh Nation was invited to participate in river otter-related fieldwork. The objectives of this work were to document river otter relative abundance within the Regional Assessment Area, document and describe use of riparian areas, identify high use areas, and potential areas and options for mitigation. Tsleil-Waututh

was unable to coordinate a qualified representative to participate in this fieldwork within the timeframe provided.

Materials shared with Tsleil-Waututh Nation during the pre-Application Phase are outlined below:

| Document | Description |
|---|---|
| Project Description and Key Areas of Study (Project Description) | Document prepared according to guidance provided in EAO's <i>Guidelines for Preparing a Project Description for an Environmental Assessment in British Columbia</i> (EAO 2013). |
| Draft Application Information Requirements | The Working Group review of the draft Application Information Requirements (dAIR) commenced on January 6, 2016 . The dAIR outlines the studies, methods and information required for the Application for an Environmental Assessment Certificate. |
| Draft Application Information Requirements Presentation (December 2015) | Discussion of how comments received on first draft Application Information Requirements document were integrated into the next revised version. |
| Application Information Requirements | Final version of the document was issued on May 24, 2016. |
| Aboriginal Consultation Plan (April 2016) | Final version of Aboriginal Consultation Plan that incorporated input received from Aboriginal Groups and EAO. |
| Draft Part C content | Draft components of Part C for review and comment by Schedule B Aboriginal groups: baseline summaries and mapping. |
| Aboriginal Consultation Report 1 | Draft summary of general consultation undertaken to date on the Project. For review and comment. |
| Aboriginal Consultation Report 2 | Draft report with Aboriginal Group-specific information on consultation undertaken to date on the Project. For review and comment. |

During the pre-Application Phase, documents/information shared by Tsleil-Waututh include:

- STIC Community Health Indicators (Email January 27, 2016)

- Smart Roadways Feasibility Study outlined (Email February 22, 2016)
- Comments on Draft Part C (Letter/email April 27, 2016)
- Comments on Aboriginal Consultation Plan 1 (Letter/email May 6, 2015)
- Information related to suicide prevention concept (Email January 27, 2016)

Meetings with Tsleil-Waututh

During the pre-Application Phase, the Ministry met twice with Tsleil-Waututh Nation (see list of meetings for details) and conducted two conference calls in relation to Tsleil-Waututh's comments on the dAIR.

Tsleil-Waututh Nation has attended two EAO-led Working Group meetings and has engaged directly with EAO with respect to the EA process. The EAO-led Working Group meetings focused on the following:

- Working Group Meeting (January 21, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - Project overview and update
 - Key Areas of Study
 - dAIR Overview
 - Preliminary conclusions from study results to date
- Working Group Meeting (March 10, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - List of materials available on Project website
 - Review of comments received on dAIR and resulting changes to the dAIR
 - Description and rationale of assessment areas

Communications Methods

During the pre-Application Phase, email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Tsleil-Waututh Nation representatives
- Follow up to meetings or earlier communications
- Provision of Project-related documents, updates and sharing of information
- Response to concerns or questions in relation to the Project

- Clarification of information and feedback shared by Tsleil-Waututh Nation
- To address and resolve Project-related concerns

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Tsleil-Waututh Nation
- Confirmation of information and follow up to previous communications
- Updates and sharing of information
- To address and resolve Project-related concerns

Documents for review were shared via email, in letter format and via mail/courier. Letters sent to Tsleil-Waututh include:

- Letter requesting review of Draft Part C content
- Letter requesting review of Draft Aboriginal Consultation Report 1
- Letter requesting review of Draft Aboriginal Consultation Report 2

Consultation on Aboriginal Consultation Report 2

On June 17, 2016, Tsleil-Waututh Nation provided comments on draft Aboriginal Consultation Report 2.

Tsleil-Waututh requested that the summary of Tsleil-Waututh's input on Aboriginal Consultation Report 1 (p.144) be updated to reflect two other comments: general comments on the organization of ACR1 (general and Tsleil-Waututh documents provided separately vs together) and; concerns expressed that were not captured in Table 7 of ACR1. The Ministry revised the summary of Tsleil-Waututh's comments on Aboriginal Consultation Report 1 per Tsleil-Waututh's request.

Tsleil-Waututh also requested edits to page 143 to ensure a bullet point that was added to accommodate feedback on Aboriginal Consultation Report 1 was properly encapsulated into the points. The requested edits were made per Tsleil-Waututh's request.

In addition to this feedback, Tsleil-Waututh requested that the Tsleil-Waututh issues table be directly and formally captured in Aboriginal Consultation Report 2, that it be embedded in the document. Tsleil-Waututh also noted that, per their comment on Aboriginal Consultation Report 1, concerns expressed in the March 1, 2016 tracking table had not been captured. The Ministry has revised the Tsleil-Waututh issues table to ensure all concerns are captured and has embedded the table within Aboriginal Consultation Report 2.

Tsleil-Waututh also noted that while Aboriginal Consultation Report 2 accurately reported that Tsleil-Waututh declined to participate in the river otter-related fieldwork, Tsleil-Waututh was unable to coordinate a qualified representative within the timeframe provided. The Ministry revised the text related to the river otter fieldwork to include this additional information.

Concerns, Issues and Interests Raised by Tsleil-Waututh Nation

Consultation efforts to date, have sought to identify and address concerns and issues raised by Tsleil-Waututh Nation during the Initial Consultation and pre-Application Phases.

The Ministry has requested Tsleil-Waututh's input on a table accompanying both Aboriginal Consultation Reports to ensure that issues and concerns have been accurately and appropriately captured. The Ministry requested Tsleil-Waututh's input on Appendix A: Key Issues and Concerns to both Aboriginal Consultation Reports to ensure that issues and concerns have been accurately and appropriately captured. Aboriginal Consultation Report 2's Appendix A has been revised to reflect input received to date and to include status and next steps. This table is also included in Part C as Appendix O2.

2.16 Summary of Consultation Activities with Hwlitsum

The following section summarizes consultation undertaken with the Hwlitsum during the Initial Consultation and the pre-Application Phases of the Project. This content reflects efforts taken to consult with Hwlitsum and of the issues, concerns and interests raised to date. The Ministry has considered Hwlitsum's input on the draft of this Consultation Report and revised content where appropriate, and will share a final version of the Consultation Report with Hwlitsum.

Initial Consultation

The Ministry initiated consultation with Hwlitsum in early 2014. At that time, Hwlitsum was affiliated with the Cowichan Nation Alliance and participated in Project consultation as a member of the Cowichan Nation Alliance. In fall 2014, Hwlitsum indicated that they would engage with the Ministry directly. In support of consultation undertaken during the Initial Consultation Phase, the following Ministry-led activities have been undertaken with Hwlitsum:

- Meetings with Hwlitsum Chief and Council, staff and consultants;
- Site visit;
- Sharing of Project-related materials;
- Sharing of draft documents for review and comment; and
- Provision of capacity funding to support participation in consultation activities,

review of documents, and submission of an Hwlitsum Project-related Study.

During initial discussions with Hwlitsum, and as demonstrated in the Consultation Plan and Hwlitsum/George Massey Tunnel Replacement Project Funding Agreement, the Ministry sought input in the development of a consultation approach, and later a Consultation Plan, specific to Hwlitsum.

Consultation activities during this period were focused on, among other things, the Project scope and schedule, proposed Studies/Valued Components, and identification of potential impacts on Hwlitsum's Aboriginal Interests and mitigation measures that may be used to avoid or minimize any effects on Aboriginal Interests.

These discussions were supported by presentations and where possible, involved the Project's subject matter experts. The Ministry offered to present on any topic of interest to Hwlitsum during this phase including any of the presentations from the May 2015 Environmental Update package (contents detailed in list of materials).

In addition to meetings with Hwlitsum representatives during the Initial Consultation Phase, Hwlitsum participated in a site visit which focused on key Project components, mutual sharing of information, plans for Tunnel decommissioning, the Deas Slough Bridge, and Deas Island, as well as anticipated works and enhancement opportunities for Green Slough.

During the Initial Consultation Phase, the Ministry sought Hwlitsum's input on the following EA-related documents:

- Draft Project Description and Key Areas of Study
- Draft Archaeological Overview Assessment
- Draft Archaeological Heritage Resources Assessment
- Draft Aboriginal Consultation Plan
- Draft Application Information Requirements

With the exception of the draft Consultation Plan, the Ministry met with Hwlitsum and walked through these draft documents. Focused discussions on these documents were intended to explain the scope and content, to respond to any initial questions and to elicit input.

While early drafts of these documents such as the Project Description and Key Areas of Study and the draft Application Information Requirements were shared during the Initial Consultation Phase, they were provided again in their revised format for further review in the pre-Application Phase.

Meetings with Hwlitsum

Between early 2014 and May 2016, the Ministry and Hwlitsum discussed and exchanged Project-related information through emails, phone calls, a community meeting and in-person meetings. Meetings and related activities undertaken with Hwlitsum in relation to the Project are outlined below.

At meetings with Hwlitsum during Initial Consultation, the Ministry provided introductory information regarding the proposed Project scope and Project schedule, and sought input with respect to Hwlitsum’s past, current and future use of the Project area for the exercise of identified Aboriginal Interests, concerns related to potential impacts on Hwlitsum’s Aboriginal Interests and opportunities related to mitigation of any potential effects. The Ministry also sought to determine Hwlitsum’s preferences with respect to participation in Project consultation, EA review, and related activities. During the initial meetings, communications protocols were established and key contacts were identified and/or confirmed.

In coordinating and conducting meetings with Hwlitsum, wherever possible, the Ministry has ensured the following:

- Meetings were held at the preferred location and in the preferred format for Hwlitsum.
- Meetings were scheduled at a date and time convenient for Hwlitsum and that facilitated the attendance of key representatives.
- Input into the agenda was considered in the planning of the meeting and, where input had not been provided beforehand, the agenda made provisions for additional topics to be discussed.
- Technical and knowledgeable Ministry representatives have been present.
- Materials have been shared beforehand and are provided in a preferred format.
- Meetings have been respectful, productive and consistent with the principles and objectives of the Consultation Plan.

During this period, key topics and presentations covered during meetings with Hwlitsum include: Archaeology/Heritage Resources, Marine Use, Fish and Fish Habitat, River Hydraulics and Morphology, Green Slough concept, Project Description and Key Areas of Study document, Project Definition Report and the Draft Application Information Requirements.

As outlined in the Aboriginal Consultation Plan, the Ministry has been committed to sharing Project-related information with Hwlitsum as it becomes available. The Ministry considered the provision of early drafts of key EA documents to Hwlitsum as an opportunity to:

- Acknowledge and respond to known concerns regarding the high volume of project referrals, challenging timelines for review and limited resources to allocate to EA review processes;
- Meet the objective of sharing Project-related documents in a timely manner with the intent to facilitate Hwlitsum's' review and comment;
- Consider and incorporate input, address concerns and identify gaps in relation to key aspects of the Project (e.g. Valued Components, studies and study area boundaries) prior to the pre-Application Phase; and to

- Allow time for meetings to be coordinated and conducted regarding particular documents or aspects of the Project of interest to Hwlitsum in advance of the pre-Application Phase.

During the Initial Consultation Phase, the Ministry communicated with Hwlitsum through letters, email and phone calls.

Letters sent to Hwlitsum during this consultation Phase include:

- Introductory letter notifying Hwlitsum of the Project and offering to meet regarding the proposed Project;
- Project Description letter accompanying a draft copy of the Project Description and Areas of Study document requesting review and comment; and
- Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment letter requesting review and comment on the Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment (document also provided).

Email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Hwlitsum representatives;
- Follow up to meetings or earlier communications;
- Provision of Project-related documents, updates and sharing of information;
- Response to concerns or questions in relation to the Project;
- Clarification of information and feedback shared by Hwlitsum; and
- To address and resolve Project-related concerns.

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Hwlitsum;
- Confirmation of information and follow up to previous communications;
- Updates and sharing of information; and
- To address and resolve Project-related concerns.

Project-related documents and materials used during consultation are listed in Aboriginal Consultation Report 1.

Aboriginal Consultation Plan – Hwlitsum Review and Comment

From the beginning of consultation, the Ministry worked with Hwlitsum to develop a mutually acceptable consultation approach, including the manner in which Hwlitsum was to be kept informed about the Project, and the means by which comments (e.g., on the Project, its potential effects and the mitigation measures that may be used to avoid or minimize those effects) were to be communicated and addressed by the Ministry.

The Consultation Plan is informed by regulatory and legal requirements, the importance of enhancing or maintaining a positive, respectful and productive working relationship with Hwlitsum, and specific input received during initial GMT consultation meetings with Hwlitsum. The Consultation Plan lists consultation activities, agreed to by both parties, and specified under the Hwlitsum/GMT capacity funding agreement.

The Ministry undertook the activities below in order to obtain and, where appropriate, incorporate, input on the Aboriginal Consultation Plan:

- Email request for review and comment on a draft of the Consultation Plan provided as an attachment.
- Follow up communications (email and phone calls) to schedule a meeting to discuss the draft Consultation Plan.
 - Discuss or obtain clarification on any comments provided by Hwlitsum to the Ministry.
- Revision of draft Consultation Plan
- Sharing of Consultation Plan and a summary of responses to Hwlitsum's comments/input.
 - Revised Consultation Plan and, for ease of reference, original Draft Consultation Plan provided via email
 - Summary of comments/input provided by Hwlitsum and corresponding action taken by the Ministry (i.e. revision to plan, comment "noted", request for further discussion regarding request)

The Consultation Plan was revised, based on input received from Hwlitsum and other Aboriginal Groups, and approved by EAO on April 6, 2016. In consideration of the confidential nature of comments provided on the draft Plan and that specific consultation activities were planned for each Aboriginal Group, the Ministry responded directly to each group regarding their respective comments on the Plan. Where Aboriginal Groups comments or requests did not result in changes to the Plan, a response was provided, along with an offer to meet to discuss any outstanding concerns or questions. Based on feedback received to date and discussions with Hwlitsum on this matter, the Ministry is of the understanding that Hwlitsum has no outstanding concerns or comments with

respect to the Plan.

Capacity Funding

During Initial Consultation meetings, Hwlitsum identified the need for capacity funding to support Hwlitsum's involvement in Project consultation activities, review of EA-related documents and participation in the pre-Application phase of the EA process. Hwlitsum also identified the need for funding for a Project-related Study. The Ministry and Hwlitsum worked together to finalize a funding agreement. The agreement specifies the activities covered under the agreement and Project/EA-related documents for Hwlitsum's review and comment. Hwlitsum submitted a study entitled "Hwlitsum Traditional Use and Occupancy Study 2015".

Involvement in Archaeological Component of the Project

From the outset of discussions, Hwlitsum identified the importance of the archaeological component of the Project and of Hwlitsum's involvement in fieldwork and review of draft archaeological documents. All draft archaeological documents were shared with Hwlitsum for review and comment. The Ministry and its archaeologist offered to meet with Hwlitsum to present on this aspect of the Project. Hwlitsum representatives were invited to participate in archaeological fieldwork for the Project.

Hwlitsum submitted comments on the Draft Heritage Resources Overview Assessment/Archaeological Overview Assessment for the Project via letter/email dated December 12, 2014. Where appropriate, revisions to the draft Overview assessment were made based on input received from Aboriginal Groups during their review.

Pre-Application Consultation

The following section outlines consultation activities that the Ministry has undertaken with Hwlitsum during the pre-Application Phase. The approach was developed with input from Hwlitsum during the Initial Consultation Phase described above and as detailed in the Consultation Plan. It is also informed by EAO's Section 11 Order, specifically Part G section 13 and 14, which outlines Aboriginal consultation requirements for the Ministry.

During pre-Application phase consultation with Hwlitsum, the Ministry has:

- Provided capacity funding to support continued involvement in Project consultation activities and the regulatory process;
- Provided all relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Hwlitsum's Aboriginal Interests;
- Identified and provided, where possible, opportunities for Hwlitsum to participate

in fieldwork (River otter study);

- Identified and documented questions, issues and interests raised by Hwlitsum;
- Continued to work with Hwlitsum to identify potentially affected Aboriginal Interests;
- Identified measures to avoid, mitigate, or where required accommodate, potential adverse effects on Aboriginal Interests as appropriate; and
- Supported EAO-led Technical Working Group.

Funding for Application Review

The Ministry will work with Hwlitsum to provide capacity funding for the Application Review Phase, with the aim of providing reasonable capacity support for participation in the review of the EA and any related permitting processes. Funding is intended to facilitate participation in technical reviews and analyses, for ongoing consultation activities (as specified in the Consultation Plan), and to support Hwlitsum in presenting information regarding their respective Aboriginal Interests. Funding is also being provided to ensure the consultation requirements pursuant to the Section 11 Order are met and the Consultation Plan is implemented as intended.

Consultation on EA-related documents

During this phase, the Ministry consulted Hwlitsum on the following Project-related documents:

- Draft Project Description and Key Areas of Study document
- Draft Application Information Requirements;
- Content of draft Application Part C of the Environmental Assessment Application
- Draft Consultation Report 1

Draft Consultation Report 2 was provided to Hwlitsum for review and comment. Where appropriate, input received from Hwlitsum on Report 2 has been incorporated into the revised document.

Consultation on Aboriginal Consultation Report 1

The Ministry provided draft Consultation Report 1 to Hwlitsum for review and comment prior to finalization and submission to EAO indicating that feedback received by May 2, 2016, would be incorporated into the final version as appropriate. Draft Part C content was also provided for review. Hwlitsum provided comments on Aboriginal Consultation Report 1 and Draft Part C content on May 10, 2016. Where appropriate, revisions were made to these drafts based on the input received.

Hwlitsum attended two EAO-led Working Group meetings and engaged directly with EAO with respect to the EA process.

Participation in Fieldwork

In April 2016, Hwlitsum was invited to participate in river otter-related fieldwork. The objectives of this work were to document river otter relative abundance within the Regional Assessment Area, document and describe use of riparian areas, identify high use areas, and potential areas and options for mitigation. Hwlitsum was unable to participate in the fieldwork due to a scheduling conflict.

Materials shared with Hwlitsum during the pre-Application Phase are outlined below:

| Document | Description |
|---|---|
| Project Description and Key Areas of Study (Project Description) | Document prepared according to guidance provided in EAO's <i>Guidelines for Preparing a Project Description for an Environmental Assessment in British Columbia</i> (EAO 2013). |
| Draft Application Information Requirements | The Working Group review of the draft Application Information Requirements (dAIR) commenced on January 6, 2016 . The dAIR outlines the studies, methods and information required for the Application for an Environmental Assessment Certificate. |
| Draft Application Information Requirements Presentation (December 2015) | Discussion of how comments received on first draft Application Information Requirements document were integrated into the next revised version. |
| Application Information Requirements | Final version of the document was issued on May 24, 2016. |
| Aboriginal Consultation Plan (April 2016) | Final version of Aboriginal Consultation Plan that incorporated input received from Aboriginal Groups and EAO. |
| Draft Part C content | Draft components of Part C for review and comment by Schedule B Aboriginal groups: baseline summaries and mapping. |
| Aboriginal Consultation Report 1 | Draft summary of general consultation undertaken to date on the Project. For review and comment. |
| Aboriginal Consultation Report 2 | Draft report with Aboriginal Group-specific information on consultation undertaken to date on the Project. For review and comment. |

Meetings with Hwlitsum

During the pre-Application Phase, the Ministry held a community meeting with Hwlitsum. At the request of Hwlitsum, the Project team provided an overview of the Project (scope, components, schedule, EA process) and a focused presentation on fish and fish habitat (see list of meetings for details).

Hwlitsum has attended two EAO-led Working Group meetings and has communicated directly with EAO with respect to the EA process. The EAO-led Working Group meetings focused on the following:

- Working Group Meeting (January 21, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - Project overview and update
 - Key Areas of Study
 - dAIR Overview
 - Preliminary conclusions from study results to date
- Working Group Meeting (March 10, 2016): *A one-day workshop with all members of working group. Discussions and presentations focused on:*
 - EA Process
 - List of materials available on Project website
 - Review of comments received on dAIR and resulting changes to the dAIR
 - Description and rationale of assessment areas

Communications Methods

During the pre-Application Phase, email communication was used for the following purposes:

- Coordination of meetings and other consultation activities with Hwlitsum representatives
- Follow up to meetings or earlier communications
- Provision of Project-related documents, updates and sharing of information
- Response to concerns or questions in relation to the Project
- Clarification of information and feedback shared by Hwlitsum
- To address and resolve Project-related concerns

The Ministry used phone communications for the following purposes:

- Coordination of meetings and other consultation activities with Hwlitsum
- Confirmation of information and follow up to previous communications
- Updates and sharing of information
- To address and resolve Project-related concerns

Documents for review were shared via email, in letter format and via mail/courier and include the following:

- Letter requesting review of Draft Part C content of the Application
- Letter requesting review of Draft Aboriginal Consultation Report 1
- Letter requesting review of Draft Aboriginal Consultation Report 2

Consultation on Aboriginal Consultation Report 2

Pursuant to the Section 11 Order, a draft version of Aboriginal Consultation Report 2 was shared with Hwlitsum for review and comment. Hwlitsum provided comments on June 20, 2016.

Among the comments provided by Hwlitsum was a request to refer to Hwlitsum as a First Nation. Hwlitsum has previously made this request. The Ministry has shared this concern with EAO and will continue its reference to “Hwlitsum” in accordance with the Section 11 Order.

Hwlitsum will be provided with a final copy of Aboriginal Consultation Report 2 along with an explanation of how their input has been considered and any changes to the final Aboriginal Consultation Report 2 as a result of their feedback.

On June 28, 2016, Hwlitsum provided the following comments on Consultation Report 2. These have been addressed in Schedule A: Key Issues and Concerns.

- Request to be referenced as a First Nation
- Hwlitsum participation

Concerns, Issues and Interests Raised by Hwlitsum

Consultation efforts to date have sought to identify and address concerns and issues raised by Hwlitsum during the Initial Consultation and pre-Application Phases.

Supported EAO-led Technical Working Group. George Massey Tunnel Replacement Project Funding Agreement Cowichan Tribes Cowichan Tribes Supported EAO-led Technical Working Group. The Ministry requested Hwlitsum’s input on Appendix A: Key Issues and

Concerns to both Aboriginal Consultation Reports to ensure that issues and concerns have been accurately and appropriately captured. Aboriginal Consultation Report 2's Appendix A has been revised to reflect input received to date and to include status and next steps. This table is also included in Part C as Appendix P2.

3. ONGOING CONSULTATION AND ENGAGEMENT

3.1 Application Review Consultation:

The Ministry will continue to implement consultation and engagement methods in accordance with the Consultation Plan and Section 11 Order. Input received from Aboriginal Groups on the planned consultation for the Application Review Phase as well as the Post Environmental Certificate Consultation will be considered and, subject to EAO approval, any necessary refinements to the Consultation Plan will be made.

During the Application Review Phase, the Ministry will continue to work with Aboriginal Groups to further refine community-specific consultation activities (Appendix A of Consultation Plan) and to coordinate the provision of Application Review Stage participation funding.

Ongoing consultation through this Phase will be focused on supporting Aboriginal Groups in their review of the Application; continuing to responding to questions, concerns and issues; and working with Aboriginal Groups with respect to the development of strategies to avoid, mitigate or otherwise address any adverse Project-related effects. The Ministry will also continue to explore, with Schedule B Aboriginal Groups, opportunities to provide economic and non-economic benefits to Aboriginal Groups that are directly affected by the Project. Opportunities include training, employment and contracting, as well as environmental enhancement works and other components of the Project.

The Ministry proposes to undertake the following consultation activities with Schedule B Aboriginal Groups during the Application Review Stage:

- Notify Aboriginal Groups of the submission of the Application.
- Provide copies of the Application to Aboriginal Groups (in preferred format) in advance of Application Review
- Conduct meetings with Chief and Council and/or staff in support of their review of the Application (with participation of appropriate technical experts); to continue to resolve issues and concerns, to refine mitigation measures; to discuss Project-related benefits and opportunities (economic and non-economic), to identify and plan follow up strategies, and additional consultation and engagement requirements or commitments in relation to the Project's approval and construction.

- Correspondence/communications related to, among other things, coordination of consultation activities, Project updates, resolution of concerns/issues, and identification of measures to avoid, mitigate or otherwise accommodate potential adverse effects on Aboriginal Interests.
- Presentations to Chief and Council, or in the case of the TSAWWASSEN, to Advisory Council and Executive Council.
- Open houses or other special meetings (per request of Aboriginal Groups).
- Provide responses to Aboriginal Groups' comments and maintain an issue/response tracking table that will be provided to EAO.
- Requirements as specified under the Section 11 Order.

Working Group Meetings/Open Houses:

At the direction of EAO, the Ministry will participate in and attend EAO-led Working Group meetings and Open Houses.

Aboriginal Consultation Report 3

During the Application Review Phase, the Ministry will prepare Aboriginal Consultation Report 3 which will include how potential adverse effects of the Project will be avoided, mitigated, addressed or otherwise accommodated, including any changes to the proposed Project design or other mitigation measures; as appropriate. Aboriginal Consultation Report 3 will also summarize the efforts undertaken by the Ministry to consult with Aboriginal Groups and comply with the Consultation Plan; identify the feedback and information received during consultation; identify the potential effects of the proposed Project on Aboriginal Groups' Aboriginal Interests; and provide next steps/future consultation activities, other than those outlined in the approved Consultation Plan.

As specifically outlined in the Section 11 Order, the Ministry must submit Aboriginal Consultation Report 3 to the Aboriginal Groups listed on Schedule B of this Order for review and comment prior to submitting the report to the Project Assessment Lead and must advise the Project Assessment Lead how Schedule B Aboriginal Groups were consulted and what feedback was provided when submitting Aboriginal Consultation Report 3 to the Project Assessment Lead.

The Project Assessment Lead will assess Aboriginal Consultation Report 3a. The Project Assessment Lead may order additional consultation activities within prescribed time limits.

Per the requirements of the Section 11 Order, the Ministry will undertake the following activities with Schedule C Aboriginal groups:

- Provide a response to comments received from Aboriginal groups, to the satisfaction and within the timeframe specified by the Project Assessment Lead; and
- Implement additional measures for consultation and accommodation of Aboriginal groups, where required by the Project Assessment Lead.

3.2 Post-Environmental Assessment Certificate Consultation

The Ministry will continue to consult with Aboriginal groups after issuance of the Environmental Assessment Certification. If issues arise during the Post-EAC Consultation Phase, the Ministry will:

- Notify Schedule B Aboriginal Groups of the outcome of the Application Review, including requirements of the EAC and related commitments and assurances.
- Continue to consult with Schedule B Aboriginal Groups to fulfill obligations outlined in the environmental certificate, including but not limited to, review of construction-related plans and designs, and involvement in Project components of interest such as environmental enhancement and mitigation.
- Continue to engage Schedule B Aboriginal Groups with respect to Project-related training, employment, contracting and other opportunities.
- Maintain ongoing communication and engagement with Schedule B Aboriginal Groups, including providing regular updates in relation to construction and Project milestones.

4. NEXT STEPS

This report summarizes the Ministry's consultation with Aboriginal Groups during the Initial Consultation Phase through to the submission of the Application for completeness review. Aboriginal Groups were provided with this draft report for the purposes of review and comment. The Ministry requested input by June 17, 2016, in order to be able to consider and incorporate feedback, where appropriate, in advance of submission to EAO. Feedback was incorporated into the Report up to June 29, 2016. The revised Consultation Report will be provided to all Aboriginal Groups for their reference.

The Ministry acknowledges the importance of appropriately and effectively engaging with Aboriginal Groups with Aboriginal Interests within the Project alignment. The Ministry is committed to building and maintaining positive working relationships with these Aboriginal groups. The Ministry has approached consultation and engagement in a manner consistent with this commitment and will continue to work with Aboriginal Groups in this way throughout this Project.

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. Environmental Assessment Act (B.C. EAA), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. EAA sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. EAA, and that it requires an EAC.

The Project as proposed is not subject to review under the Canadian Environmental Assessment Act, 2012, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the Environmental Assessment Act.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------------|-------------------------|
| Social and cultural effects and the adequacy of EA methodology | <p>Concerns related to the adequacy of Environmental Assessment are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Social and cultural effects of the project are considered in Part C of the Environmental Assessment Application (Application). Where Aboriginal Groups values and perspectives have been provided to the Proponent regarding environmental, economic, social, heritage or health valued components (VCs), they have been incorporated, where applicable into the Part B assessment of those VCs.</p> | Referred to EAO | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|-------------------------|
| Strength of Claim assessment and related depth of consultation. | Concerns related to the strength of claim assessment have been referred to EAO and MARR. | Referred to EAO and MARR | None |
| Project's EA Process and its associated timelines. | Concerns relating to the EA process and its associates timelines were referred to EAO. EAO issued a memo to members of the Working Group on March 18, 2016 in response to questions and concerns related to the EA process and its associated timelines. The Ministry understands that EAO responded to Cowichan Tribes' queries regarding the EA Process and associated timelines. | Referred to EAO | None |
| Effectiveness and nature of the EA process as well as current volume of EAs underway | Concerns relating to the broad concern related to the effectiveness and nature of the Environmental Assessment Process have been referred to EAO. While the Ministry is unable to address the concern related to the current volume of EA's underway, the Ministry has and will continue to work with Cowichan Tribes to support their participation in this particular Project's review process and to plan for consultation activities in a manner that is mindful of the current volume of referrals that Cowichan Tribes is working on. Support to date has included Pre-Application capacity funding. | Referred to EAO | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------|--------------------------------------|
| Lack of resources and funding for First Nations communities. | The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. | Addressed | Funding for Application Review Phase |

ABORIGINAL INTERESTS

There are potential Project related impacts to Cowichan Tribes title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape

Quality of experience while engaged in or tied to traditional use

- cultural landscape

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

Quality of experience while engaged in or tied to traditional use

- changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
 - Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Cowichan Tribes as a result of the Project are not expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|---|
| <p>Potential impacts to Cowichan Tribes title, Rights and culture. Identification of future developments should include potential Cowichan Tribes title and rights resulting from treaty negotiations or proof of title.</p> | <p>Potential Project related impacts to Cowichan Tribes title, Rights and culture, the level of effect predicted, and mitigation measures are outlined the Application. The Ministry will continue to consult with Cowichan Tribes to ensure any effects are minimized.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application</p> |
| <p>Identification of “other requirements that are relevant to the Project, including international agreements or other agreements” should be included in the Crown’s Constitutional obligations to First Nations“</p> | <p>The Crown’s constitutional obligations are fundamental to consultation with Cowichan Tribes and the EA process. The obligations within the context of the EA are addressed in Part C of the Application.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation</p> |
| <p>“Consideration for future uses should include Cowichan Nation Alliance’s plans to re-establish a site on λəqtinəs/Tl’uqtinus site for residential and/or commercial purposes.”</p> | <p>Noted</p> | <p>Noted</p> | <p>Ongoing consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Cowichan Tribes access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel.</p> | <p>Cowichan Tribes' access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A measurable direct effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation measures outlined in Section 5.2.4</p> |
| <p>Social effects of the Project such as Cowichan Tribes' knowledge transmission, language loss, dependency and social interaction.</p> | <p>Social effects of the Project on Cowichan Tribes ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation measures outlined in all sections of the Application</p> |

| | <p>predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3 and Section 10.3 of the Application.</p> | | |
| <p>Protection of Cowichan Tribes' rights to harvest within the Project area.</p> | <p>Cowichan Tribes' rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures outlined in Table 10.3-1 and Section 10.1.3.4, residual effects on the exercise of Aboriginal Interests by Cowichan Tribes as a result of the Project are not expected.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and Implementation of measures outlined in Section 10.1.3.4</p> |
| <p>Assessment of cumulative effects in regards to the inclusion of other reasonably foreseeable projects and activities.</p> | <p>The Ministry's cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed.</p> | <p>Addressed</p> | <p>None</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|-------------------------|
| Concern that the overlapping construction period of GMT and Pattullo projects needs to be considered in the assessment. | Rehabilitation of the Pattullo Bridge will be completed by October 2016. The replacement of the Pattullo bridge is in planning stages and a construction period has yet to be established. | Addressed | None |
| Consideration of cumulative effects on aboriginal rights, including measurement against a pre-industrial baseline | The Application will include historical context as outlined relating to changes in use over time by Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by First Nations or was otherwise available from publicly available sources. However, there is no EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests. | Addressed | None |
| Absence of a comprehensive study of cumulative effects on the Fraser River | While the Ministry acknowledges that Cowichan Tribes is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|-------------------------|
| Length of time tolls are in place | <p>The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |
| Revenue sharing opportunities from tolling | <p>Revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |

| ABORIGINAL CONSULTATION | | | |
|---|---|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.</p> <p>Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process | Cowichan Tribes received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Cowichan Tribes as it relates to confidentiality and dissemination | The Ministry understands and respects that certain information shared by Cowichan Tribes may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Cowichan Tribes requests to keep information confidential. | Addressed | Appropriate use of confidential information |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|---|
| Funding for Traditional Use Study | The Ministry signed a funding agreement with Cowichan Tribes which provided funding for a Traditional Use Study. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project's Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests

Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes

Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns

Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes

Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects

Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.

Incorporate community and traditional knowledge in Project components

Document and report to EAO on the Ministry's Aboriginal consultation program at times specified by EAO.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

| <p>Opportunities for cultural recognition and naming</p> | <p>The Ministry is exploring opportunities for cultural recognition and naming and will to work with Cowichan Tribes on this matter.</p> | <p>Ongoing</p> | <p>Further engagement with Cowichan Tribes is planned to explore opportunities related to cultural recognition and naming, art and interpretive signage</p> |
| <p>Project-related employment, training, contracting, and economic development opportunities. Equity and revenue sharing for Cowichan Tribes and importance of initiating related discussions with Cowichan Tribes during Pre-Application Stage. Aboriginal procurement policy.</p> | <p>The Ministry is committed to working with Cowichan Tribes to identify potential opportunities to benefit from the Project. The Ministry acknowledges that Cowichan Tribes wants to prepare its membership for employment opportunities and will work with Cowichan Tribes to identify ways to support community preparedness.</p> | <p>Ongoing</p> | <p>The Ministry will share information including identification of potential employment, training, contracting and economic development opportunities as it becomes available to support community preparedness. The Ministry welcomes input from Cowichan Tribes on the type of information that would be useful.</p> |
| <p>Interest in land recovery at Green Slough</p> | <p>As part of the Project, agricultural land will be protected as much as practical. Once the project is completed, there will be a determination of surplus lands, if any, and disposition will follow the appropriate process including consultation.</p> | <p>Addressed</p> | <p>Determination of surplus lands and consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------|--|
| Adequate training time to take full advantage of potential future Project work activities | The Ministry is committed to working with Cowichan Tribes to identify potential opportunities to benefit from the Project. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Cowichan Tribes to identify ways to support community preparedness. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful. |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Development of a mitigation plan to ensure protection to the Lulu-island-Delta water main.

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Change in flow rates after Tunnel removal | The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments | Addressed in Application | Implementation of mitigation measures outlined in Section 4.1.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|--|
| | <p>anticipated during Tunnel removal is expected to be relatively minor. River Hydraulics and River Morphology are addressed in Section 4.1.</p> | | |
| <p>Factoring in extreme weather events in River Hydraulics model</p> | <p>Extreme weather events are considered and planned for. River Hydraulics and River Morphology are addressed in Section 4.1.4.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4</p> |
| <p>Potential for contaminants in the tunnel and how this may affect tunnel decommissioning.</p> | <p>The Ministry will consult with Fisheries and Oceans Canada and Port Metro Vancouver regarding Tunnel decommissioning, and will incorporate the requirements of these agencies in the planning and implementation of decommissioning activities.</p> <p>If potentially hazardous building materials are identified in the Tunnel, a detailed plan for removing and appropriately disposing of such material will be developed prior to initiating decommissioning activities. Any potentially hazardous material identified will be managed in accordance with applicable legislation, including the B.C. Hazardous Waste Regulation, B.C. Reg. 63/88, and the Workers' Compensation Board of B.C. Occupational Health and Safety Regulation, B.C. Reg. 296/97.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.1.4 and 4.2.4</p> |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Project activities undertaken in the upland ditch systems will follow Standards and Best Practices for Instream Works.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|--|
| <p>Potential effects of run off and drainage</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.2.4</p> |
| <p>Effect of the Tunnel on dissolved oxygen content within the river.</p> | <p>The Ministry is following up with Cowichan Tribes to obtain further clarification regarding their concern regarding the effect of the Tunnel on dissolved oxygen content within the river.</p> | <p>Ongoing</p> | <p>Clarification regarding concern</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Impact of potential pollutants and contaminants within the tunnel walls on the river if left in place. | The tunnel decommissioning is anticipated to involve the removal of the four in-river sections of the Tunnel. | Addressed | None |
| Improved ditches will result in less filtering of deleterious materials | Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Sediment and Water Quality is addressed in Section 4.2 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 |
| Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River. | Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application. | Addressed in Application | None |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term potential of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|--|
| <p>Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon</p> | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to Cowichan Tribes. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.4.4</p> |
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.3.4 and 4.4.4</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.
 Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan
 Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Cowichan Tribes has not voiced any specific issues or concerns with respect to Marine Mammals. | | | |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail marsh that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management plan will included in the Construction Environmental Management Plan

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|---|
| Invasive plant species and proposed plans to manage presence during construction | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 |
| Culturally significant plants should be used in planting plans | Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans. | Addressed | The Ministry will develop planting plans with consultation from Aboriginal Groups |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Potential light and noise effects on wildlife and fish.</p> | <p>The Ministry understands that Cowichan Tribes is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
| <p>Potential effects of the bridge structure on species such as waterfowl and migratory birds.</p> | <p>The Ministry understands that Cowichan Tribes is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects
 No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation
 Minimize effects through Project design.
 Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.
 Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects
 No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--------|---------------------------|--------|-------------------------|
|--------|---------------------------|--------|-------------------------|

| | | | |
|--|---|---------------------------------|--|
| <p>Potential effects to air quality, particularly as it relates to terrestrial wildlife.</p> | <p>The Ministry understands that Cowichan Tribes is concerned with the potential effects of air quality, particularly on terrestrial wildlife species. Projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
|--|---|---------------------------------|--|

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry's 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Noise monitoring program.

Site specific schedules and activities.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Increase in traffic and consequent increase in associated noise and vibration due to the increases capacity of the new bridge.</p> | <p>The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new Bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment, after mitigation, are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the Highway but do not exceed what is acceptable for residential, educational or institutional facilities. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |
| <p>Choice of building materials in relation to noise and vibration</p> | <p>The Ministry confirms that appropriate building materials will be used to mitigate noise and vibration. Mitigation in accordance with the Ministry’s 2014 Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways will be implemented, as warranted, at select locations to avoid or minimize potential Project-related increase in post-construction noise levels. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

During construction, a measureable effect on access to instream locations for traditional use has been determined.

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Potential effects of construction during fishing season on fishing activities. Impacts of Tunnel decommissioning on Aboriginal fisheries, specifically as it relates to timing.</p> <p>“The proposed project has a direct impact on how we are able to use and navigate the areas surrounding the proposed project, and the impact of the project as it limits this ability needs to be considered in the Aboriginal Interests Assessment.”</p> <p>“Future exercise of our Aboriginal rights to fish (and also to harvest) including in-water and upland of the South arm of the Fraser should be considered when assessing project impacts of our interests.”</p> | <p>Potential interference with Cowichan Tribes fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |
| <p>Facilitation of increased shipping in the river</p> | <p>The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river.</p> | <p>Addressed</p> | <p>None</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Residual & Cumulative Effects

There is a low, short-term probability of disturbance to residential, commercial and industrial land use during construction.

There is a moderate , short-term probability of disturbance to recreational users near the new bridge during construction

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Cowichan Tribes has not voiced any specific issues or concerns with respect to Land Use | | | |

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a chance find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites and specific concern for any effects on the Łæqtinəs/Tl'uqtinus site and potential archaeological values at interchanges</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Cowichan Tribes. All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment. Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|--|
| Participation in archaeological fieldwork and review of archaeological draft reports | Cowichan Tribes participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports. | Addressed | Cowichan Tribes will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports. |
| Ethnographical content in reports does not accurately reflect Cowichan Tribes historical presence within the Project area | The Ministry noted Cowichan Tribes concern that ethnographical content in Project reports does not accurately reflect Cowichan Tribes historical presence within the Project area. The Ministry continues to work with Cowichan Tribes to address this concern. | Ongoing | Ongoing consultation |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

A negligible effect on access to instream locations for traditional use has been determined.

7.0 HUMAN HEALTH

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.
 A negligible effect on access to upland locations for traditional use has been determined.
 A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation
 Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.
 Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

Residual & Cumulative Effects
 No significant Project-related residual or cumulative effects on human health are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---|-------------------------|
| Aboriginal health is not currently being considered in the assessment | Aboriginal health was considered in the assessment of potential Project-related effects on human health, including community and social factors. Human Health is addressed in Section 7.1 of the Application. | Addressed in Assessment and Application | None |
| Current conditions along the foreshore and in the Fraser River are not properly understood and have not been considered in the Human Health Assessment | Current conditions along the foreshore were considered in the assessment of potential Project-related effects on human health, including community and social factors. Human Health is addressed in Section 7.1 of the Application. | Addressed in Assessment and Application | None |

| 8.0 ACCIDENTS AND MALFUNCTIONS | | | |
|---|--|--------------------------|--|
| <p>Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.</p> <p>In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | As outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan), an Emergency Response and Spill Contingency Plan will be developed. The Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills. | Addressed in Application | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |
| Contaminants from automobile emission currently captured in Tunnel. New Bridge will send emissions directly into the air and Fraser River and settle on the foreshore | Automobile emissions are currently released from the Tunnel through a series of vents. Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|-------------------------|
| | <p>construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | | |
| <p>New Bridge could “unleash pent-up demand” and create even more congestion</p> | <p>The Project has been designed to address issues related to current and future traffic safety, congestion and reliability, and to help achieve regional mode share targets by facilitating travel across the Fraser River by transit, HOVs, cycling and walking. During operations, the Project will provide travel time savings for commuters or 25-35 minutes per day, improve safety with a forecast 35 percent reduction in collisions, and support provincial and regional strategies to encourage mode shift to transit and carpooling. As proposed, Project-related improvements, including tolling, will moderate traffic growth while effectively serving forecast demand at the crossing.</p> | <p>Addressed</p> | <p>None</p> |

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. Environmental Assessment Act (B.C. EAA), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. EAA sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. EAA, and that it requires an EAC.

The Project as proposed is not subject to review under the Canadian Environmental Assessment Act, 2012, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the Environmental Assessment Act.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------------|-------------------------|
| Social and cultural effects and the adequacy of EA methodology | <p>Concerns related to the adequacy of Environmental Assessment are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Social and cultural effects of the project are considered in Part C of the Environmental Assessment Application (Application). Where Aboriginal Groups values and perspectives have been provided to the Proponent regarding environmental, economic, social, heritage or health valued components (VCs), they have been incorporated, where applicable into the Part B assessment of those VCs.</p> | Referred to EAO | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|--------------------------------------|
| Strength of Claim assessment and related depth of consultation. | Concerns related to the strength of claim assessment have been referred to EAO and MARR. | Referred to EAO and MARR | None |
| Project's EA Process and its associated timelines. | Concerns relating to the EA process and its associates timelines were referred to EAO. EAO issued a memo to members of the Working Group on March 18, 2016 in response to questions and concerns related to the EA process and its associated timelines. The Ministry understands that EAO responded to Halat First Nations's queries regarding the EA Process and associated timelines. | Referred to EAO | None |
| Effectiveness and nature of the EA process as well as current volume of EAs underway | Concerns relating to the broad concern related to the effectiveness and nature of the Environmental Assessment Process have been referred to EAO. While the Ministry is unable to address the concern related to the current volume of EA's underway, the Ministry has and will continue to work with Halalt First Nation to support their participation in this particular Project's review process and to plan for consultation activities in a manner that is mindful of the current volume of referrals that Halalt First Nation is working on. Support to date has included Pre-Application capacity funding. | Referred to EAO | None |
| Lack of resources and funding for First Nations communities. | The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. | Addressed | Funding for Application Review Phase |

ABORIGINAL INTERESTS

There are potential Project related impacts to Halalt First Nation title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape

Quality of experience while engaged in or tied to traditional use

- cultural landscape

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

Quality of experience while engaged in or tied to traditional use

- changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
- Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Halalt First Nation as a result of the Project are not expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Potential impacts to Halalt First Nation title, Rights and culture. Identification of future developments should include potential Halalt First Nation title and rights resulting from treaty negotiations or proof of title.</p> | <p>Potential Project related impacts to Halalt First Nation title, Rights and culture, the level of effect predicted, and mitigation measures are outlined the Application. The Ministry will continue to consult with Halalt First Nation to ensure any effects are minimized.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application</p> |
| <p>Identification of “other requirements that are relevant to the Project, including international agreements or other agreements” should be included in the Crown’s Constitutional obligations to First Nations“</p> | <p>The Crown’s constitutional obligations are fundamental to consultation with Halalt First Nation and the EA process. The obligations within the context of the EA are addressed in Part C of the Application.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation</p> |
| <p>“Consideration for future uses should include Cowichan Nation Alliance’s plans to re-establish a site on Łæqtinəs/Tl’uqtinus site for residential and/or commercial purposes.”</p> | <p>Noted</p> | <p>Noted</p> | <p>Ongoing consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|---|
| <p>Halalt First Nation access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel.</p> | <p>Halalt First Nation’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A measurable direct effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation measures outlined in Section 5.2.4</p> |
| <p>Social effects of the Project such as Halalt First Nation knowledge transmission, language loss, dependency and social interaction.</p> | <p>Social effects of the Project on Halalt First Nation’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation measures outlined in all sections of the Application</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|--------------------------|--|
| | available through public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3 and Section 10.3 of the Application. | | |
| Protection of Halalt First Nation's rights to harvest within the Project area. | Halalt First Nation's rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures outlined in Table 10.3-1 and Section 10.1.3.4, residual effects on the exercise of Aboriginal Interests by Halalt First Nation as a result of the Project are not expected. | Addressed in Application | Ongoing consultation and Implementation of measures outlined in Section 10.1.3.4 |
| Assessment of cumulative effects in regards to the inclusion of other reasonably foreseeable projects and activities. | The Ministry's cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|-------------------------|
| Concern that the overlapping construction period of GMT and Pattullo projects needs to be considered in the assessment. | Rehabilitation of the Pattullo Bridge will be completed by October 2016. The replacement of the Pattullo bridge is in planning stages and a construction period has yet to be established. | Addressed | None |
| Consideration of cumulative effects on aboriginal rights, including measurement against a pre-industrial baseline | The Application will include historical context as outlined relating to changes in use over time by Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by First Nations or was otherwise available from publicly available sources. However, there is no EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests. | Addressed | None |
| Absence of a comprehensive study of cumulative effects on the Fraser River | While the Ministry acknowledges that Halalt First Nation is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|-------------------------|
| Length of time tolls are in place | <p>The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |
| Revenue sharing opportunities from tolling | <p>Revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |

| ABORIGINAL CONSULTATION | | | |
|---|---|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.</p> <p>Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process | Halalt First Nation received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Halalt First Nation as it relates to confidentiality and dissemination | The Ministry understands and respects that certain information shared by Halalt First Nation may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Halalt First Nation requests to keep information confidential. | Addressed | Appropriate use of confidential information |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|---|
| Funding for Traditional Use Study | The Ministry signed a funding agreement with Halalt First Nation which provided funding for a Traditional Use Study. | Addressed | None |
| Capacity funding to facilitate participation in the Project review process | Halalt First Nation received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Halalt First Nation as it relates to confidentiality and dissemination | The Ministry understands and respects that certain information shared by Halalt First Nation may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Halalt First Nation requests to keep information confidential. | Addressed | Appropriate use of confidential information |
| Funding for Traditional Use Study | The Ministry signed funding agreements with Halalt First Nation which provided funding for a Traditional Use Study. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project's Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests

Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes

Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns

Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes

Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects

Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.

Incorporate community and traditional knowledge in Project components

Document and report to EAO on the Ministry's Aboriginal consultation program at times specified by EAO.

| <p>Opportunities for cultural recognition and naming</p> | <p>The Ministry is exploring opportunities for cultural recognition and naming and will work with Halalt First Nation on this matter.</p> | <p>Ongoing</p> | <p>Further engagement with Halalt First Nation is planned to explore opportunities related to cultural recognition and naming, art and interpretive signage</p> |
| <p>Project-related employment, training, contracting, and economic development opportunities. Equity and revenue sharing for Halalt First Nation and importance of initiating related discussions with Halalt First Nation during Pre-Application Stage. Aboriginal procurement policy.</p> | <p>The Ministry is committed to working with Halalt First Nation to identify potential opportunities to benefit from the Project. The Ministry acknowledges that Halalt First Nation wants to prepare its membership for employment opportunities and will work with Halalt First Nation to identify ways to support community preparedness.</p> | <p>Ongoing</p> | <p>The Ministry will share information including identification of potential employment, training, contracting and economic development opportunities as it becomes available to support community preparedness. The Ministry welcomes input from Halalt First Nation on the type of information that would be useful.</p> |
| <p>Interest in land recovery at Green Slough</p> | <p>As part of the Project, agricultural land will be protected as much as practical. Once the project is completed, there will be a determination of surplus lands, if any, and disposition will follow the appropriate process including consultation.</p> | <p>Addressed</p> | <p>Determination of surplus lands and consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------|--|
| Adequate training time to take full advantage of potential future Project work activities | The Ministry is committed to working with Halalt First Nation to identify potential opportunities to benefit from the Project. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Halalt First Nation to identify ways to support community preparedness. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful. |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Development of a mitigation plan to ensure protection to the Lulu-island-Delta water main.

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Change in flow rates after Tunnel removal</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm.</p> <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor.</p> <p>River Hydraulics and River Morphology are addressed in Section 4.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4</p> |
| <p>Factoring in extreme weather events in River Hydraulics model</p> | <p>Extreme weather events are considered and planned for. River Hydraulics and River Morphology are addressed in Section 4.1.4.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|--|
| <p>Potential for contaminants in the tunnel and how this may affect tunnel decommissioning.</p> | <p>The Ministry will consult with Fisheries and Oceans Canada and Port Metro Vancouver regarding Tunnel decommissioning, and will incorporate the requirements of these agencies in the planning and implementation of decommissioning activities.</p> <p>If potentially hazardous building materials are identified in the Tunnel, a detailed plan for removing and appropriately disposing of such material will be developed prior to initiating decommissioning activities. Any potentially hazardous material identified will be managed in accordance with applicable legislation, including the B.C. Hazardous Waste Regulation, B.C. Reg. 63/88, and the Workers' Compensation Board of B.C. Occupational Health and Safety Regulation, B.C. Reg. 296/97.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.1.4 and 4.2.4</p> |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Project activities undertaken in the upland ditch systems will follow Standards and Best Practices for Instream Works.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|---|
| Potential effects of run off and drainage | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected.</p> <p>Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 |
| Effect of the Tunnel on dissolved oxygen content within the river. | <p>The Ministry is following up with Halalt First Nation to obtain further clarification regarding their concern regarding the effect of the Tunnel on dissolved oxygen content within the river.</p> | Ongoing | Clarification regarding concern |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Impact of potential pollutants and contaminants within the tunnel walls on the river if left in place. | The tunnel decommissioning is anticipated to involve the removal of the four in-river sections of the Tunnel. | Addressed | None |
| Improved ditches will result in less filtering of deleterious materials | Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Sediment and Water Quality is addressed in Section 4.2 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 |
| Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River. | Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application. | Addressed in Application | None |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term potential of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|--|
| <p>Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon</p> | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to Halalt First Nation. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.4.4</p> |
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.3.4 and 4.4.4</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.
 Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan
 Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Halalt First Nation has not voiced any specific issues or concerns with respect to Marine Mammals. | | | |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail marsh that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management plan will included in the Construction Environmental Management Plan

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|---|
| Invasive plant species and proposed plans to manage presence during construction | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 |
| Culturally significant plants should be used in planting plans | Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans. | Addressed | The Ministry will develop planting plans with consultation from Aboriginal Groups |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Potential light and noise effects on wildlife and fish.</p> | <p>The Ministry understands that Halalt First Nation is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
| <p>Potential effects of the bridge structure on species such as waterfowl and migratory birds.</p> | <p>The Ministry understands that Halalt First Nation is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--------|---------------------------|--------|-------------------------|
|--------|---------------------------|--------|-------------------------|

| | | | |
|--|---|---------------------------------|--|
| <p>Potential effects to air quality, particularly as it relates to terrestrial wildlife.</p> | <p>The Ministry understands that Cowichan Tribes is concerned with the potential effects of air quality, particularly on terrestrial wildlife species. Projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
|--|---|---------------------------------|--|

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry's 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Noise monitoring program.

Site specific schedules and activities.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Increase in traffic and consequent increase in associated noise and vibration due to the increases capacity of the new bridge.</p> | <p>The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new Bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment, after mitigation, are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the Highway but do not exceed what is acceptable for residential, educational or institutional facilities. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |
| <p>Choice of building materials in relation to noise and vibration</p> | <p>The Ministry confirms that appropriate building materials will be used to mitigate noise and vibration. Mitigation in accordance with the Ministry’s 2014 Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways will be implemented, as warranted, at select locations to avoid or minimize potential Project-related increase in post-construction noise levels. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

During construction, a measureable effect on access to instream locations for traditional use has been determined.

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Potential effects of construction during fishing season on fishing activities. Impacts of Tunnel decommissioning on Aboriginal fisheries, specifically as it relates to timing.</p> <p>“The proposed project has a direct impact on how we are able to use and navigate the areas surrounding the proposed project, and the impact of the project as it limits this ability needs to be considered in the Aboriginal Interests Assessment.”</p> <p>“Future exercise of our Aboriginal rights to fish (and also to harvest) including in-water and upland of the South arm of the Fraser should be considered when assessing project impacts of our interests.”</p> | <p>Potential interference with Halalt First Nation fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |
| <p>Facilitation of increased shipping in the river</p> | <p>The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river.</p> | <p>Addressed</p> | <p>None</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Residual & Cumulative Effects

There is a low, short-term probability of disturbance to residential, commercial and industrial land use during construction.

There is a moderate , short-term probability of disturbance to recreational users near the new bridge during construction

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Halalt First Nation has not voiced any specific issues or concerns with respect to Land Use | | | |

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a chance find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites and specific concern for any effects on the ǻǻqtinǻs/TI'uqtinus site and potential archaeological values at interchanges</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Halalt First Nation.</p> <p>All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment.</p> <p>Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |
| <p>Participation in archaeological fieldwork and review of archaeological draft reports</p> | <p>Halalt First Nation was invited to participate in all archaeological field work to date and was provided the opportunity to review draft archaeological reports.</p> | <p>Addressed</p> | <p>Halalt First Nation will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports.</p> |
| <p>Ethnographical content in reports does not accurately reflect Halalt First Nation historical presence within the Project area</p> | <p>The Ministry noted Halalt First Nation concern that ethnographical content in Project reports does not accurately reflect Halalt First Nation historical presence within the Project area. The Ministry continues to work with Halalt First Nation to address this concern.</p> | <p>Ongoing</p> | <p>Ongoing consultation</p> |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

A negligible effect on access to instream locations for traditional use has been determined.

7.0 HUMAN HEALTH

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.
 A negligible effect on access to upland locations for traditional use has been determined.
 A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation
 Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.
 Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

Residual & Cumulative Effects
 No significant Project-related residual or cumulative effects on human health are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

| 8.0 ACCIDENTS AND MALFUNCTIONS | | | |
|---|--|--------------------------|--|
| <p>Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.</p> <p>In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | As outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan), an Emergency Response and Spill Contingency Plan will be developed. The Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills. | Addressed in Application | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |
| Contaminants from automobile emission currently captured in Tunnel. New Bridge will send emissions directly into the air and Fraser River and settle on the foreshore | Automobile emissions are currently released from the Tunnel through a series of vents. Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|-----------|-------------------------|
| | Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects. | | |
| New Bridge could “unleash pent-up demand” and create even more congestion | The Project has been designed to address issues related to current and future traffic safety, congestion and reliability, and to help achieve regional mode share targets by facilitating travel across the Fraser River by transit, HOVs, cycling and walking. During operations, the Project will provide travel time savings for commuters or 25-35 minutes per day, improve safety with a forecast 35 percent reduction in collisions, and support provincial and regional strategies to encourage mode shift to transit and carpooling. As proposed, Project-related improvements, including tolling, will moderate traffic growth while effectively serving forecast demand at the crossing. | Addressed | None |

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. Environmental Assessment Act (B.C. EAA), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. EAA sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. EAA, and that it requires an EAC.

The Project as proposed is not subject to review under the Canadian Environmental Assessment Act, 2012, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the Environmental Assessment Act.

| Inclusion in Environmental Assessment Office (EAO) process ensures that Katzie First Nation concerns are addressed. | Noted. | Noted | None |
| Project's EA Process and its associated timelines. Effectiveness and nature of the EA process as well as current volume of EAs underway, | Concerns relating to the EA process and its associates timelines were referred to EAO. EAO issued a memo to members of the Working Group on March 18, 2016 in response to questions and concerns related to the EA process and its associated timelines. The Ministry understands that EAO responded to Katzie's queries regarding the EA Process and associated timelines. | Referred to EAO | None |
| Lack of resources and funding for First Nations communities. | The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. | Addressed | Funding for Application Review Phase |

ABORIGINAL INTERESTS

There are potential Project related impacts to Katzie title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape

Quality of experience while engaged in or tied to traditional use

- cultural landscape

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- Fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

- Quality of experience while engaged in or tied to traditional use
- Changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
 - Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Katzie as a result of the Project are not expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|---|
| <p>Potential impacts to Katzie First Nation title, Rights and culture</p> | <p>Potential Project related impacts to Katzie title, Rights and culture, the level of effect predicted, and mitigation measures are outlined in the Application. The Ministry will continue to meet with Katzie to ensure any effects are minimized.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation of mitigation measures</p> |
| <p>Cumulative effects: Consideration of cumulative effects on Aboriginal rights. Assessment of cumulative effects in regards to the inclusion of other reasonably foreseeable projects and activities. Absence of a comprehensive study of cumulative effects on the Fraser River</p> | <p>The Application will include historical context as outlined relating to changes in use over time by Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by First Nations or was otherwise available from publicly available sources. However, there is no EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests.</p> <p>The Ministry’s cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual)</p> | <p>Addressed</p> | <p>None</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------|-------------------------|
| | <p>cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed. While the Ministry acknowledges that Katzie First Nation is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project.</p> | | |
| <p>“Any work approval within the Katzie First Nation traditional territory is without prejudice to any positions that may be taken by the Katzie First Nation in any litigation or negotiation (including treaty negotiations) and is not intended to define, create, recognize, deny or amend any aboriginal or treaty right within the meaning of sections 25 and 35 of the Constitution Act, 1982.”</p> | <p>Noted</p> | <p>Noted</p> | <p>None</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|---|
| <p>Katzie First Nation’s access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel and the importance of working closely with communities to ensure negative effects are avoided.</p> | <p>Katzie’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A negligible effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation measures outlined in Section 5.2.4</p> |
| <p>Construction and demolition of structures within the Katzie First Nation traditional territory must not impact the ability of community members to participate in traditional activities on the land and water, specifically fishing in and around the Project area.</p> | <p>Katzie’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures outlined in Table 10.3-1 and Section 10.1.3.X, residual effects on the exercise of Aboriginal Interests by Katzie as a result of the Project are not expected.</p> | <p>Addressed in Application</p> | <p>Implementation of measures outlined in Section 10.1.3.4</p> |
| <p>Katzie First Nation requires the joint development of construction and demolition operations and mitigation plans to address this specific issue during the summer and fall fishing season.</p> | <p>The Ministry will consult with Aboriginal Groups in the development of Construction Environmental Management, Construction Traffic Management, Marine Access Management, Health and Safety, and Operation Environmental Management plans.</p> | <p>Addressed</p> | <p>Ongoing consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|--|
| <p>Adequacy of standard social and cultural impact assessment demonstrating Katzie’s use, occupancy, ties and attachment, and changes to cultural landscapes.</p> | <p>Social effects of the Project on Katzie’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3.8 and Section 10.3 of Part C of the Application.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application</p> |
| <p>Protection of Katzie First Nation’s rights to harvest within the Project area.</p> | <p>Katzie’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife, residual effects on the exercise of Aboriginal Interests by Katzie as a result of the Project are not expected.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife)</p> |

| ABORIGINAL CONSULTATION | | | |
|---|---|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.</p> <p>Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process. | Katzie received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Katzie First Nation as it relates to confidentiality and dissemination. | The Ministry understands and respects that certain information shared by Katzie may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Katzie requests to keep information confidential. | Addressed | Appropriate use of confidential information |
| Funding for Traditional Use Study | The Ministry signed funding agreements with Katzie which provided funding for a Traditional Use Study. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT-RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project’s Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests

Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes

Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns

Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes

Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects

Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.

Incorporate community and traditional knowledge in Project components

Document and report to EAO on the Ministry’s Aboriginal consultation program at times specified by EAO.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------|--|
| Opportunities for cultural recognition and naming. | The Ministry is exploring opportunities for cultural recognition and naming and will to work with Katzie on this matter. | Ongoing | Discussion with Katzie to explore opportunities related to cultural recognition and naming, art and interpretive signage |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|---|
| <p>Project-related employment, training, contracting, and economic development opportunities.</p> <p>Equity and revenue sharing for Aboriginal Groups and importance of initiating related discussions with Aboriginal Groups during the Pre-Application Stage.</p> | <p>The Ministry is committed to working with Katzie to identify potential opportunities to benefit from the Project. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Katzie to identify ways to support community preparedness.</p> | <p>Ongoing</p> | <p>The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful.</p> |
| <p>The Ministry's approach to procurement for the Project will not result in meaningful benefits to Aboriginal Groups.</p> | <p>The Ministry is confident that the process will effectively allow for benefits to be provided to Aboriginal Groups.</p> | <p>Addressed</p> | <p>Ongoing consultation</p> |
| <p>Interest in revenue sharing opportunities from tolling</p> | <p>The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. In accordance with the provincial tolling strategy, revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways.</p> | <p>Addressed</p> | <p>None</p> |

4.1 RIVER HYDRALICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|---|
| Change in flow rates after Tunnel removal. | The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. River Hydraulics and River Morphology are addressed in Section 4.1. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.1.4 |

SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such a turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|---|
| Potential effects of run off and drainage. | The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity in anticipated. No | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|-------------------------|
| | <p>appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | | |
| <p>Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River.</p> | <p>Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> | <p>Addressed in Application</p> | <p>None</p> |

FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

- A negligible effect on the availability of fish resources for traditional use has been determined.
- A negligible effect on quality of fish resources for traditional use has been determined.
- A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

- Avoid effects through Project design.
- Apply best management and environmental management practices.
- Develop Construction Environmental Management and Operational Environmental Management plans.
- Use timing windows for undertaking in-stream works.
- Erosion and sediment control.
- Habitat enhancement and offsetting.

Residual & Cumulative Effects

- There is a low, short-term probability of physical injury or mortality to fish through crushing or entrainment during the construction period.
- No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|--|
| Potential effects to fish and fish habitat and spawning grounds, including species of cultural and economic importance such as eulachon, sturgeon, and salmon. | The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon, and salmon to Katzie and is committed to avoiding or mitigation any potential effects. Fish and Fish Habitat are discussed in Section 4.4. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.4.4 (Fish and Fish Habitat Mitigation Measures) of the Application |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|---|
| Inclusion of mud sharks in baseline studies. | Fish species included in baseline studies were selected based on presence (or potential presence) in the study area and their potential for interaction with the Project. Mud sharks (spiny dogfish) are not known to frequent the Project area. | Addressed | None |
| Fish mortality from pile driving and blasting. | The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. Mitigation, including timing windows for undertaking in-stream work and other measures outline in Project-related Environmental Management Plans, will ensure that potential effects on fish and fish habitat are effectively addressed. Fish mortality should not be a significant issue during pile driving. | Addressed in Application | Implementation of mitigation measures outlined in 4.4.4 (Fish and Fish Habitat Mitigation Measures) |
| Effects of pile driving on salmon migration. | The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. Mitigation, including timing windows for undertaking in-stream work and other measures outline in Project-related Environmental Management Plans, will ensure that potential effects on fish and fish habitat are effectively addressed. Pile driving should not impact salmon migration. | Addressed in Application | Implementation of mitigation measures outlined in 4.4.4 (Fish and Fish Habitat Mitigation Measures) |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon.</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 (Underwater Noise) and 4.4 (Fish and Fish Habitat).</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.3.4 (Underwater Noise Mitigation Measures) and 4.4.4 (Fish and Fish Habitat Mitigation Measures)</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.
 Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan
 Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Katzie has not voiced any specific issues or concerns with respect to Marine Mammals. | | | |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail march that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management.

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|--|
| Invasive plant species and proposed plans to manage presence during construction. | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 (Vegetation Mitigation Measures) |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------|---|
| Inclusion of culturally significant plants in planting plans and opportunity for Katzie in the identification of plants, and planting work. Katzie has the capacity to undertake this type of work. | Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans. | Addressed | The Ministry will develop planting plans with consultation from Aboriginal Groups |

TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| <p>Impact of laydown areas on terrestrial wildlife.</p> | <p>The Application has been developed with the assumption that all temporary and permanent works will be included within the Project alignment. Potential staging areas that will be made available to the contractor encompass areas within the highway right-of-way that have been previously developed and disturbed.</p> <p>Any temporary or permanent works that are to take place will be subject to applicable permitting requirements, including Water Sustainability Act permitting. Applications for these permits will include detailed descriptions and locations of works to take place.</p> <p>If the contractor chooses to develop staging areas on sites other than those identified, site specific environmental permitting and approvals will be obtained by the contractor.</p> | <p>Addressed</p> | <p>Obtain site specific environmental permits and approvals</p> |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Development of an Air Quality and Dust Control Management Plan for inclusion of the Construction Environmental Management Plan.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Katzie has not voiced any specific issues or concerns with respect to Air Quality. | | | |

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry’s 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------|---|
| Potential impacts of noise from pile driving and blasting. | Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application. | Addressed | Implementation of mitigation measures as outlined in Section 4.3.4 (Underwater Noise Mitigation Measures) and 4.4.4 (Fish and Fish Habitat Mitigation Measures) |

MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

A negligible effect on access to instream locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|--|
| <p>Potential effects of construction during fishing season on fishing activities.</p> | <p>Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction. Mitigation of these effects will include the development and implementation of a specific Katzie marine use protocol through direct consultation with Katzie. Further mitigation can be achieved through the development and implementation of a Marine Access Management Plan for inclusion of the CEMP, establishment of communications protocols, appropriate lighting and marking for safe navigation, and establishment of navigation protection zones during construction.</p> <p>The Ministry understands the importance of working closely with Katzie to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in 5.2.4 (Marine Use Mitigation Measures)</p> |
| <p>Effects of construction and decommissioning-related barging activities on Katzie First Nation fishing activities and on the test fishery.</p> | <p>Potential interference with Katzie fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|-----------------------------|
| <p>Katzie First Nation requires the joint development of construction and demolition operations and mitigation plans to address this specific concern during the summer and fall fishing seasons.</p> | <p>The Ministry understands the significance of fish and fish habitat to Katzie. The Ministry is committed to further discussions with Katzie regarding the Development of a Construction Environmental Management and a Marine Access Management Plan. Fish and Fish Habitat are discussed in Section 4.4.</p> | <p>Addressed</p> | <p>Ongoing consultation</p> |
| <p>Facilitation of barges and larger vessels in the South Arm channel.</p> | <p>The Project will not appreciably increase the size of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the river. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river.</p> | <p>Addressed</p> | <p>None</p> |

LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Address temporary effects on existing land use during construction and incorporate land use considerations into a Traffic Management Plan.

Incorporate land use considerations into a Marine Access Management Plan.

Reconnect recreational trails.

Residual & Cumulative Effects

There is a high, short-term probability of disturbance to residential, commercial and industrial land uses.

There is a high, short-term probability of disturbance to recreational uses near the new bridge.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Katzie has not voiced any specific issues or concerns with respect to Land Use. | | | |

5.5 VISUAL QUALITY

The new bridge will add noticeable visual features to the landscape and will change visual conditions adjacent to the Project alignment. Replacement of interchanges also has the potential to change visual conditions of these locations. At distances greater than one kilometer, the bridge deck will merge with the natural landscape and the main visual features will be the bridge towers. Changes in visual quality at interchanges will be minor as visual quality in such areas is currently influenced by existing transportation infrastructure.

Effects

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Minimize effects through Project design.

Use of vegetated buffers to minimize visual effects to residential developments within close proximity to the bridge in Delta.

Residual & Cumulative Effects

There is a moderate, long-term probability of disturbance to visual quality.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Katzie has not voiced any specific issues or concerns with respect to Visual Quality | | | |

HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a change find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|---|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites. Protection of cultural and archaeological sites that are known to exist or may be discovered within the Project area.</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Katzie. All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment. Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|---|
| Participation in archaeological fieldwork and review of archaeological draft reports | Katzie participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports. | Addressed | Katzie will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports. |
| Concern that the Ministry's archaeological consultant will not work effectively with Aboriginal Groups based on experience on past projects | The Ministry worked with Katzie to resolve this concern. | Addressed | None |

HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible adverse effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible direct effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

During construction, a measureable effect on access to instream locations for traditional use has been determined.

| HUMAN HEALTH | | | |
|---|--|---------------------------------|---|
| <p>During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.</p> <p>During operation, a negligible effect on access to instream locations for traditional use has been determined.</p> <p>During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.</p> <p>A negligible effect on access to upland locations for traditional use has been determined.</p> <p>A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.</p> <p><u>Mitigation</u></p> <p>Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.</p> <p>Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.</p> <p><u>Residual & Cumulative Effects</u></p> <p>No significant Project-related residual or cumulative effects on human health are expected.</p> | | | |

| <p>Katzie First Nation has experience with the Golden Ears Bridge being in proximity to the community and with the issue of suicide. Concern that there will be appropriate safety/suicide fencing on the new structure and importance of considering how the new bridge could facilitate suicide.</p> | <p>The Ministry is in the process of developing a policy in which new bridges in the Lower Mainland will require the installation of safety barriers. The Ministry is committed to including safety barriers as part of the design of the new bridge and will continue to discuss additional measures with Katzie First Nation.</p> <p>Assessment of potential Project-related effects on human health, including community and social factors, are presented in Section 7.1 of the Application.</p> | <p>Addressed in Application</p> | <p>Development of safety barrier policy for new bridges in the Lower Mainland.</p> <p>Implementation of mitigation measures outlined in Section 7.1</p> |

| ACCIDENTS AND MALFUNCTIONS | | | |
|--|---|---------------|--|
| <p>Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.</p> <p>In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | An Emergency Response and Spill Contingency Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills | Addressed | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |

| OTHER ISSUES | | | |
|--|---|--------------------------|--|
| Consultation with Katzie First Nation identified issues outside of the environmental assessment process, Aboriginal Interests, Aboriginal Consultation, Aboriginal Participation and Project-Related Opportunities, and sections of the Application. | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Length of time tolls are in place | The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application. | Addressed | None |
| Potential for falling snow and ice | The design of the new bridge is similar to the Alex Fraser Bridge, with cable stays on the outside of the span. There are no cables crossing the deck. The Project design will include snow and ice control measures. | Addressed | Snow and ice control measures in Project design. |
| Congestion at Richmond-Vancouver border | Traffic analysis shows that approximately 60 per cent of northbound morning Tunnel traffic is destined to Richmond, and that traffic volumes at the Oak Street and Knight Street bridges have been declining since 2010. While Oak Street is likely to remain congested due to signal lights at Oak Street and 70th Avenue in Vancouver, the Project is not expected to result in more traffic | Addressed in Application | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|--|
| | <p>driving over Oak Street Bridge each day. The new replacement bridge and the Highway 99 improvements will increase the convenience of accessing transit and provide an efficient route to the Canada Line stations in Richmond for commuters continuing to Vancouver. Traffic is addressed in Section 5.1 of the Application.</p> | | |
| <p>Potential for contaminants in the Tunnel and how this may affect Tunnel decommissioning.</p> | <p>The Ministry will consult with Fisheries and Oceans Canada and Port Metro Vancouver regarding Tunnel decommissioning, and will incorporate the requirements of these agencies in the planning and implementation of decommissioning activities.</p> <p>If potentially hazardous building materials are identified in the Tunnel, a detailed plan for removing and appropriately disposing of such material will be developed prior to initiating decommissioning activities. Any potentially hazardous material identified will be managed in accordance with applicable legislation, including the B.C. Hazardous Waste Regulation, B.C. Reg. 63/88, and the Workers' Compensation Board of B.C. Occupational Health and Safety Regulation, B.C. Reg. 296/97.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.1.4 and 4.2.4</p> |

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. *Environmental Assessment Act* (B.C. *EAA*), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. *EAA* sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. *EAA*, and that it requires an EAC.

The Project as proposed is not subject to review under the *Canadian Environmental Assessment Act, 2012*, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the *Environmental Assessment Act*.

| Social and cultural effects and the adequacy of Environmental Assessment (EA) methodology. | <p>Concerns related to the adequacy of Environmental Assessment are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Social and cultural effects of the project are considered in Part C of the Environmental Assessment Application (Application). Where Aboriginal Groups values and perspectives have been provided to the Proponent regarding environmental, economic, social, heritage or health valued components (VCs), they have been incorporated, where applicable into the Part B assessment of those VCs.</p> | Addressed | None |

ABORIGINAL INTERESTS

There are potential Project related impacts to Kwantlen title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape
- Instream locations (during construction)

Quality of experience while engaged in or tied to traditional use

- cultural landscape
- Instream locations (during construction)

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations (during construction)
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

Quality of experience while engaged in or tied to traditional use

- changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
- Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Kwantlen as a result of the Project are not expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Kwantlen First Nation’s access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel and the importance of working closely with communities to ensure negative effects are avoided.</p> | <p>Kwantlen’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A measurable direct effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation measures outlined in Section 5.2.4</p> |
| <p>Social effects of the Project such as Kwantlen First Nation’s knowledge transmission, language loss, dependency and social interaction.</p> | <p>Social effects of the Project on Kwantlen’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs predominantly within</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|--|
| | <p>Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3.8 and Section 10.3 of Part C of the Application.</p> | | |
| <p>Protection of Kwantlen First Nation’s rights to harvest within the Project area.</p> | <p>Kwantlen’s rights to harvest within the Project area are addressed in Part C of the Application.</p> <p>With the implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife, residual effects on the exercise of Aboriginal Interests by Kwantlen as a result of the Project are not expected.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife)</p> |

| ABORIGINAL CONSULTATION | | | |
|---|---|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.</p> <p>Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process. | Kwantlen received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Kwantlen First Nation as it relates to confidentiality and dissemination. | The Ministry understands and respects that certain information shared by Kwantlen may be considered confidential. The Ministry is subject to the provisions of the <i>Freedom of Information and Protection of Privacy Act</i> . However, subject to the requirements of applicable laws, the Ministry will respect Kwantlen requests to keep information confidential. | Addressed | Appropriate use of confidential information |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|-----------------------------------|---|---------------|--------------------------------|
| Funding for Traditional Use Study | The Ministry signed funding agreements with the members of the Kwantlen which provided funding for a Traditional Use Study. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT-RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project. Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project’s Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests

Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes

Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------|--|
| Opportunities for cultural recognition and naming. | The Ministry is exploring opportunities for cultural recognition and naming and will to work with Kwantlen on this matter. | Ongoing | Discussion with Kwantlen to explore opportunities related to cultural recognition and naming, art and interpretive signage |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|------------------|---|
| <p>Project-related employment, training, contracting, and economic development opportunities.</p> <p>Equity and revenue sharing for Aboriginal Groups and importance of initiating related discussions with Aboriginal Groups during the Pre-Application Stage.</p> | <p>The Ministry is committed to working with Kwantlen to identify potential opportunities to benefit from the Project and is confident that the Project’s procurement process will effectively allow this commitment to be met. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Kwantlen to identify ways to support community preparedness.</p> | <p>Ongoing</p> | <p>The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful.</p> |
| <p>The Ministry’s approach to procurement for the Project will not result in meaningful benefits to Aboriginal Groups.</p> | <p>The Ministry is confident that the Project’s procurement process will effectively allow for benefits to be provided to Aboriginal Groups.</p> | <p>Addressed</p> | <p>Ongoing consultation</p> |
| <p>Cumulative effects: Consideration of cumulative effects on Aboriginal rights. Assessment of cumulative effects in regards to the inclusion of other reasonably foreseeable projects and activities. Absence of a comprehensive study of cumulative effects on the Fraser River</p> | <p>The Application will include historical context as outlined relating to changes in use over time by Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by First Nations or was otherwise available from publicly available sources. However, there is no EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests.</p> <p>The Ministry’s cumulative effects assessment looked at potential incremental environmental effects of construction and</p> | <p>Addressed</p> | <p>None</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--------|---|--------|-------------------------|
| | <p>operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed. While the Ministry acknowledges that Kwantlen First Nation is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project.</p> | | |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|--|
| <p>Change in flow rates after Tunnel removal.</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm.</p> <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. River Hydraulics and River Morphology are addressed in Section 4.1.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4 (River Hydraulics and Morphology Mitigation Measures)</p> |

| 4.8 TERRESTRIAL WILDLIFE | | | |
|---|---|--------------------------|--|
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Potential light and noise effects on wildlife and fish. | The Ministry understands that Kwantlen is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.8.4 (Terrestrial Wildlife Mitigation Measures) |
| Potential effects of the bridge structure on species such as waterfowl and migratory birds. | The Ministry understands that Kwantlen is concerned with the potential effects of the new bridge on species such as waterfowl and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highway will mitigate potential Project-related increase in traffic collision risk. Nesting opportunity provided by the new bridge will offset the loss of nesting habitat due to removal of the Deas Slough Bridge. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.8.4 (Terrestrial Wildlife Mitigation Measures) |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Potential effects of run off and drainage.</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, has been determined. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected.</p> <p>Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.2.4 (Sediment and Water Quality Mitigation Measures)</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|-------------------------|
| <p>Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River.</p> | <p>Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> | <p>Addressed in Application</p> | <p>None</p> |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|---|
| Potential effects to fish and fish habitat and spawning grounds, including species of cultural and economic importance such as eulachon, sturgeon, and salmon. | The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to the Kwantlen. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application. | Addressed | Implementation of mitigation measures outlined in 4.4.4 (Fish and Fish Habitat Mitigation Measures) |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|---|
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon.</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.3.4 (Underwater Noise Mitigation Measures) and 4.4.4 (Fish and Fish Habitat Mitigation Measures)</p> |
| <p>Importance of habitat restoration and Kwantlen’s interest in participating in all aspects of these works</p> | <p>The Ministry notes Kwantlen’s interest in participating in habitat restoration work.</p> | <p>Noted</p> | <p>Ongoing consultation</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.
 Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan
 Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Kwantlen has not voiced any specific issues or concerns with respect to Marine Mammals. | | | |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail marsh that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management.

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Invasive plant species and proposed plans to manage presence during construction.</p> | <p>Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.7.4 (Vegetation Mitigation Measures)</p> |
| <p>Inclusion of culturally significant plants in planting plans and opportunity for Kwantlen in the identification of plants, and planting work.</p> | <p>Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans.</p> | <p>Addressed</p> | <p>The Ministry will develop planting plans with consultation from Aboriginal Groups</p> |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

- A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.
- A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.
- A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

- Minimize potential effects through Project design.
- Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.
- Habitat enhancement and offsetting.

Residual & Cumulative Effects

- There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.
- There is a low, long-term probability of barn owl mortality.
- No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Kwantlen has not voiced any specific issues or concerns with respect to Terrestrial Wildlife. | | | |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Development of an Air Quality and Dust Control Management Plan for inclusion of the Construction Environmental Management Plan.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Kwantlen has not voiced any specific issues or concerns with respect to Air Quality. | | | |

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry’s 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Kwantlen has not voiced any specific issues or concerns with respect to Atmospheric Noise. | | | |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

During construction, a measureable effect on access to instream locations for traditional use has been determined.

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|--|
| <p>Potential effects of construction during fishing season on fishing activities.</p> | <p>Potential interference with Kwantlen fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4 (Marine Use Mitigation Measures)</p> |
| <p>Effects of construction and decommissioning-related barging activities on Kwantlen First Nation fishing activities and on the test fishery.</p> | <p>Potential interference with Kwantlen fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4 (Marine Use Mitigation Measures)</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Address temporary effects on existing land use during construction and incorporate land use considerations into a Traffic Management Plan.

Incorporate land use considerations into a MarineAccess Management Plan.

Reconnect recreational trails.

Residual & Cumulative Effects

There is a high, short-term probability of disturbance to residential, commercial and industrial land uses.

There is a high, short-term probability of disturbance to recreational uses near the new bridge.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Kwantlen has not voiced any specific issues or concerns with respect to Land Use | | | |

5.5 VISUAL QUALITY

The new bridge will add noticeable visual features to the landscape and will change visual conditions adjacent to the Project alignment. Replacement of interchanges also has the potential to change visual conditions of these locations. At distances greater than one kilometer, the bridge deck will merge with the natural landscape and the main visual features will be the bridge towers. Changes in visual quality at interchanges will be minor as visual quality in such areas is currently influenced by existing transportation infrastructure.

Effects

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Minimize effects through Project design.

Use of vegetated buffers to minimize visual effects to residential developments within close proximity to the bridge in Delta.

Residual & Cumulative Effects

There is a moderate, long-term probability of disturbance to visual quality.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Kwantlen has not voiced any specific issues or concerns with respect to Visual Quality | | | |

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a change find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|------------------|--|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites. Protection of cultural and archaeological sites that are known to exist or may be discovered within the Project area.</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Kwantlen. All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment. Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |
| <p>Participation in archaeological fieldwork and review of archaeological draft reports</p> | <p>Kwantlen participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports.</p> | <p>Addressed</p> | <p>Kwantlen will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports.</p> |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

During construction, a measureable effect on access to instream locations for traditional use has been determined.

| 7.0 HUMAN HEALTH | | | |
|---|----------------------------------|---------------|--------------------------------|
| <p>During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.</p> <p>During operation, a negligible effect on access to instream locations for traditional use has been determined.</p> <p>During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.</p> <p>A negligible effect on access to upland locations for traditional use has been determined.</p> <p>A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.</p> <p><u>Mitigation</u></p> <p>Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.</p> <p>Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.</p> <p><u>Residual & Cumulative Effects</u></p> <p>No significant Project-related residual or cumulative effects on human health are expected.</p> | | | |

| Kwantlen has not voiced any specific issues or concerns with respect to Human Health. | | | |

8.0 ACCIDENTS AND MALFUNCTIONS

Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.

In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

| Kwantlen has not voiced any specific issues or concerns with respect to Accidents and Malfunctions. | | | |

| OTHER ISSUES | | | |
|--|---|---------------|--------------------------------|
| Consultation with Kwantlen First Nation identified issues outside of the environmental assessment process, Aboriginal Interests, Aboriginal Consultation, Aboriginal Participation and Project-Related Opportunities, and sections of the Application. | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Congestion at Richmond-Vancouver border | Traffic analysis shows that approximately 60 per cent of northbound morning Tunnel traffic is destined to Richmond, and that traffic volumes at the Oak Street and Knight Street bridges have been declining since 2010. While Oak Street is likely to remain congested due to signal lights at Oak Street and 70th Avenue in Vancouver, the Project is not expected to result in more traffic driving over Oak Street Bridge each day. The new replacement bridge and the Highway 99 improvements will increase the convenience of accessing transit and provide an efficient route to the Canada Line stations in Richmond for commuters continuing to Vancouver. Traffic is addressed in Section 5.1 of the Application. | Addressed | None |

| ENVIRONMENTAL ASSESSMENT PROCESS | | | |
|--|--|---------------|--------------------------------------|
| <p>An environmental assessment of the Project is required under the B.C. <i>Environmental Assessment Act</i> (B.C. <i>EAA</i>), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. <i>EAA</i> sets out the criteria for reviewable projects.</p> <p>On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. <i>EAA</i>, and that it requires an EAC.</p> <p>The Project as proposed is not subject to review under the <i>Canadian Environmental Assessment Act, 2012</i>, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.</p> | | | |

|--|---|---------------------------------|--|
| <p>Protection of Lake Cowichan’s rights to harvest within the Project area. “Our people used to go over to the Fraser river delta area to fish and hunt, every year, but we haven’t done that for years. Still, our right to access the area needs to be maintained. In the future it might be that area will be restored to a healthy state and we could practice our rights to camp and fish there”. “Even though the tunnel area is full of people now, and we can’t hunt or fish there, we still need to protect our rights to be there and gather food.”</p> | <p>Lake Cowichan’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife, residual effects on the exercise of Aboriginal Interests by Lake Cowichan as a result of the Project are not expected.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife)</p> |
| <p>Revenue sharing opportunities from tolling</p> | <p>Revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | <p>Addressed</p> | <p>None</p> |

| ABORIGINAL CONSULTATION | | | |
|---|---|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.</p> <p>Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process | Lake Cowichan received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Lake Cowichan First Nation as it relates to confidentiality and dissemination | The Ministry understands and respects that certain information shared by Lake Cowichan may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Lake Cowichan requests to keep information confidential. | Addressed | Appropriate use of confidential information |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|-------------------------|
| Funding for Traditional Use Study | The Ministry signed funding agreements with the members of the Lake Cowichan which provided funding for a Traditional Use Study. | Addressed | None |
| Importance of continued engagement with Aboriginal Groups on matters of importance and on success of mitigation and enhancements. “There is a need for reporting out on post-construction monitoring. This should be provided to us in the form of meetings and in writing” | Mitigation and environmental protection programs are addressed in the Application. Reporting requirements will be determined. The Ministry will undertake further discussions with Aboriginal Groups regarding post-construction monitoring and reporting. | Addressed | Ongoing consultation |

ABORIGINAL PARTICIPATION AND PROJECT-RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project's Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

- Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests
- Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes
- Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns
- Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes
- Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects
- Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.
- Incorporate community and traditional knowledge in Project components
- Document and report to EAO on the Ministry's Aboriginal consultation program at times specified by EAO.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------|--|
| Opportunities for cultural recognition and naming | The Ministry is exploring opportunities for cultural recognition and naming and will work with Lake Cowichan on this matter. | Ongoing | Discussion with Lake Cowichan to explore opportunities related to cultural recognition and naming, art and interpretive signage |
| Project-related employment, training, contracting, and economic development opportunities. Equity and revenue sharing for Aboriginal Groups and importance of initiating related discussions with Aboriginal Groups during the Pre-Application Stage. | The Ministry is committed to working with Lake Cowichan to identify potential opportunities to benefit from the Project. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Lake Cowichan to identify ways to support community preparedness. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful. |
| Adequate training time to take full advantage of potential future Project work activities. Opportunities for training related to traditional activities. | The Ministry is committed to working with Lake Cowichan First Nation to identify potential opportunities to benefit from the Project. The Ministry has initiated discussions with Lake Cowichan First Nation regarding Project-related benefits and opportunities. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful. |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|--|
| <p>Change in flow rates after Tunnel removal</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm.</p> <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. River Hydraulics and River Morphology are addressed in Section 4.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4 (River Hydraulics and River Morphology Mitigation Measures)</p> |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|--|
| Potential effects of run off and drainage | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected.</p> <p>Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 (Sediment and Water Quality Mitigation Measures) |
| Impacts of the River from potential pollutants and contaminants on the Tunnel walls if left in place | The tunnel decommissioning is anticipated to involve the removal of the four in-river sections of the Tunnel. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|-------------------------|
| <p>Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River.</p> | <p>Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> | <p>Addressed in Application</p> | <p>None</p> |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|---|
| Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon | The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to the Lake Cowichan. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in 4.4.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Fish mortality from pile driving and blasting | The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. Mitigation, including timing windows for undertaking in-stream work and other measures outline in Project-related Environmental Management Plans, will ensure that potential effects on fish and fish habitat are effectively addressed. Fish mortality should not be a significant issue during pile driving. | Addressed in Application | Implementation of mitigation measures outlined in 4.4.4 |
| Effects of pile driving on salmon migration | Pile driving should not have an impact on salmon migration. | Addressed in Application | Implementation of mitigation measures outlined in 4.3.4 and 4.4.4 |
| Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon | Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in 4.3.4 and 4.4.4 |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conservation interest, including southern resident killer whales, do not occur in the Fraser River.

Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as impact pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.

Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Impact on marine mammals such as the Stellar Sea Lion</p> | <p>Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 mms. Standard industry and best management practices will be applied to activities such as impact pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to. Marine Mammals are addressed in Section 4.6 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.6.4</p> |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail march that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management.

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|---|
| Invasive plant species and proposed plans to manage presence during construction | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|---|
| <p>Inclusion of culturally significant plants in planting plans and opportunity for Lake Cowichan in the identification of plants, and planting work. Lake Cowichan has the capacity to undertake this type of work.</p> | <p>Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans.</p> | <p>Addressed</p> | <p>Develop planting plans with consultation from Aboriginal Groups</p> |
| <p>Ministry’s hydro-seeding spray contains invasive grasses that will damage new plants and add to the problem of invasive plants.</p> | <p>The Ministry will review its hydro seed mixes.</p> | <p>Addressed</p> | <p>Review hydro-seed mixes</p> |
| <p>Potential effect of removing the Tunnel on marshes along the river</p> | <p>Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. Creating comparable habitat within the Project alignment will offset unavoidable potential Project-related effect, which is limited to a small reduction in area of the cattail marsh that overlaps with Project components. Vegetation is addressed in Section 4.7 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.7.4 (Vegetation Mitigation Measures)</p> |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|--|
| <p>Potential light and noise effects on wildlife and fish.</p> | <p>The Ministry understands that Lake Cowichan is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
| <p>Potential effects of the bridge structure on species such as waterfowl and migratory birds.</p> | <p>The Ministry understands that Lake Cowichan is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|-------------------------|
| <p>Congestion and air quality issues – support for improved transit and anything that reduces idling.</p> | <p>Automobile emissions are currently released from the Tunnel through a series of vents. Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | <p>Addressed</p> | <p>None</p> |

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry’s 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|--------------------------|--|
| Potential impacts of noise from pile driving and blasting | The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Mitigation in accordance with the Ministry’s 2014 Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways will be implemented, as warranted, at select locations to avoid or minimize potential Project-related increase in post-construction noise levels. Atmospheric Noise is addressed in Section 4.10 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in 4.10.4 |

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Increase in traffic, and consequent increase in associated noise and vibration due to the increases capacity of the new bridge</p> | <p>The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new Bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment, after mitigation, are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the Highway but do not exceed what is acceptable for residential, educational or institutional facilities. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

, a negligible effect on access to instream locations for traditional use has been determined.

, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|------------------|---|
| <p>Potential effects of construction during fishing season on fishing activities. Effects of construction and decommissioning-related barging activities on Lake Cowichan fishing.</p> | <p>Potential interference with Lake Cowichan fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Residual & Cumulative Effects

There is a low, short-term probability of disturbance to residential, commercial and industrial land use during construction.

There is a moderate , short-term probability of disturbance to recreational users near the new bridge during construction

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Lake Cowichan has not voiced any specific issues or concerns with respect to Land Use | | | |

5.5 VISUAL QUALITY

The new bridge will add noticeable visual features to the landscape and will change visual conditions adjacent to the Project alignment. Replacement of interchanges also has the potential to change visual conditions of these locations. At distances greater than one kilometer, the bridge deck will merge with the natural landscape and the main visual features will be the bridge towers. Changes in visual quality at interchanges will be minor as visual quality in such areas is currently influenced by existing transportation infrastructure.

Effects

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Minimize effects through Project design.

Use of vegetated buffers to minimize visual effects to residential developments within close proximity to the bridge in Delta.

Residual & Cumulative Effects

There is a moderate, long-term probability of disturbance to visual quality.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Lake Cowichan has not voiced any specific issues or concerns with respect to Visual Quality. | | | |

6.1 HERITAGE RESOURCESE

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a change find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites.</p> <p>Protection of cultural and archaeological sites that are known to exist or may be discovered within the Project area. No more tolerance for further disturbance of archaeological sites in the overdeveloped Lower Mainland. This includes disturbed and intact sites.</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Lake Cowichan.</p> <p>All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment.</p> <p>Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------|--|
| Participation in archaeological fieldwork and review of archaeological draft reports. Importance of having a cultural person, known to LCFN and LFN, participate in archaeological work. | Lake Cowichan participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports. | Addressed | Lake Cowichan will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports. |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

During construction, a measureable effect on access to instream locations for traditional use has been determined.

7.0 HUMAN HEALTH

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.

Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on human health are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|---|
| New bridge will result in increased suicide attempts | <p>The Ministry is in the process of developing a policy in which new bridges in the Lower Mainland will require the installation of safety barriers. The Ministry is committed to including safety barriers as part of the design of the new bridge and will continue to discuss additional measures with Lake Cowichan.</p> <p>Assessment of potential Project-related effects on human health, including community and social factors, are presented in Section 7.1 of the Application.</p> | Addressed | <p>Development of safety barrier policy for new bridges in the Lower Mainland.</p> <p>Implementation of mitigation measures outlined in Section 7.1</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|-------------------------|
| <p>Creation of areas of increased criminal activity, particularly attraction of the shadow population/marginalized groups</p> <p>“Elders have expressed concern that bridge footings and covered areas will create places used by drug users and prostitutes”.</p> <p>“The tunnel is a bottleneck and removing it will bring in more drug trafficking into Delta. I am shocked that the municipalities haven’t stood up on this one”.</p> | <p>While not assessed as a Value Component in the Application, the potential for “at-risk populations” to use/congregate in areas near the bridge will be considered in Section 7.1 of the Application.</p> | <p>Addressed</p> | <p>None</p> |

| 8.0 ACCIDENTS AND MALFUNCTIONS | | | |
|--|---|---------------|--|
| <p>Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.</p> <p>In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | An Emergency Response and Spill Contingency Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills | Addressed | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |

| OTHER ISSUES | | | |
|--|---|---------------|--------------------------------|
| Consultation with Kwantlen First Nation identified issues outside of the environmental assessment process, Aboriginal Interests, Aboriginal Consultation, Aboriginal Participation and Project-Related Opportunities, and sections of the Application. | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Congestion at Richmond-Vancouver border | Traffic analysis shows that approximately 60 per cent of northbound morning Tunnel traffic is destined to Richmond, and that traffic volumes at the Oak Street and Knight Street bridges have been declining since 2010. While Oak Street is likely to remain congested due to signal lights at Oak Street and 70th Avenue in Vancouver, the Project is not expected to result in more traffic driving over Oak Street Bridge each day. The new replacement bridge and the Highway 99 improvements will increase the convenience of accessing transit and provide an efficient route to the Canada Line stations in Richmond for commuters continuing to Vancouver. Traffic is addressed in Section 5.1 of the Application. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|-----------------------------------|--|-----------|-------------------------|
| Length of time tolls are in place | <p>The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. *Environmental Assessment Act* (B.C. *EAA*), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. *EAA* sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. *EAA*, and that it requires an EAC.

The Project as proposed is not subject to review under the *Canadian Environmental Assessment Act, 2012*, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the *Environmental Assessment Act*.

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|---|-----------------|-------------------------|
| Adequacy of Environmental Assessment (EA) methodology to address social and cultural effects | <p>Concerns related to the adequacy of Environmental Assessment are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Social and cultural effects of the project are considered in Part C of the Environmental Assessment Application (Application). Where Aboriginal Groups values and perspectives have been provided to the Proponent regarding environmental, economic, social, heritage or health valued components (VCs), they have been incorporated, where applicable into the Part B assessment of those VCs.</p> | Referred to EAO | None |

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|---|-----------------|-------------------------|
| Concern with the inclusion of certain Aboriginal Groups in Project consultation per Schedule B of the Section 11 Order | Consultation is being undertaken in accordance with the requirements of the Section 11 Order and as outlined in the Aboriginal Consultation Plan. Further discussion regarding the assignment of Aboriginal Groups to Schedule B of the Section 11 Order should be undertaken directly with EAO. | Referred to EAO | None |
| EA Process for the Project and its associated timelines | Concerns relating to the EA process and its associated timelines were referred to EAO. EAO issued a memo to members of the Working Group on March 18, 2016 in response to questions and concerns related to the EA process and its associated timelines. The Ministry understands that EAO responded to Musqueam’s queries regarding the EA Process and associated timelines. | Referred to EAO | None |

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|--|-----------------|-------------------------|
| Effectiveness and nature of the EA process as well as current volume of EAs underway | Concerns relating to the broad concern related to the effectiveness and nature of the Environmental Assessment Process have been referred to EAO. While the Ministry is unable to address the concern related to the current volume of EA's underway, the Ministry has and will continue to work with Musqueam to support their participation in this particular Project's review process and to plan for consultation activities in a manner that is mindful of the current volume of referrals that Musqueam is working on. Support to date has included Pre-Application capacity funding and the development of a Musqueam-specific Consultation Plan outlining agreed to consultation activities. The Ministry is working with Musqueam on a Memorandum of Understanding that is intended to further support Musqueam's involvement in the EA Process and associated consultation. | Referred to EAO | None |
| Use of MARR database for assessing Strength of Claim | Concerns related to the strength of claim assessment have been referred to EAO and MARR. | Referred to EAO | None |
| Standard EA methodology's use of the term "baseline" – to Musqueam this means more that current levels | The Ministry acknowledges that Musqueam's interpretation/use of the term "baseline" differs from the standard definition/use of this terminology for the purposes of this EA. | Addressed | None |

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|---|-----------------|--|
| Request for a Musqueam Specific Project-related study to be undertaken in advance of the start of the Application Review Phase | The Ministry funded a Musqueam Project-related study during the Initial Consultation Phase and will work with Musqueam during the Application Review Phase to support Musqueam in sharing information, knowledge and input in relation to the Project and its review process. The Ministry anticipates further discussion regarding the request for an additional study during Memorandum of Understanding (MOU)-related discussions. | Ongoing | MOU-related discussions, including the request for an additional study |
| EA guidelines including Application Information Requirements (AIR) template were developed without First Nations' consultation | This concern is beyond the scope of the Project's EA process and pertains to EAO process. Concerns related to First Nations consultation during the development of the AIR template have been referred to EAO. | Referred to EAO | None |
| Lack of resources and funding for participation in the EA Process | The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. The Ministry is working with Musqueam on a MOU that is intended to support Musqueam's involvement in the EA Process and associated consultation. The Ministry understands that Musqueam wishes to address Application Review Phase funding-related needs and concerns in the context of the MOU. | Ongoing | MOU-related discussions, including Application Review Phase funding |

ABORIGINAL INTERESTS

There are potential Project related impacts to Musqueam title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape
- Instream locations (during construction)

Quality of experience while engaged in or tied to traditional use

- cultural landscape
- Instream locations (during construction)

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations (during construction)
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

Quality of experience while engaged in or tied to traditional use

- changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
- Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Musqueam as a result of the Project are not expected.

| Issue | Proponent Response | Status | Next Steps by Proponent |
|---|--|--------------------------|--|
| Potential impacts to Musqueam title, Rights and culture | Potential Project related impacts to Musqueam title, Rights and culture, the level of effect predicted, and mitigation measures are outlined the Application. The Ministry will continue to consult with Musqueam to ensure any effects are minimized. | Addressed in Application | Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application |
| Social effects of the Project on Musqueam’s ability to transfer knowledge, language and participate in socio-cultural practices | Social effects of the Project on Musqueam’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3.8 and Section 10.3 of Part C of the Application. | Addressed in Application | Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application |

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|---|-----------|-------------------------|
| Consideration of cumulative effects on Aboriginal rights | The Application includes historical context relating to changes in use over time by Musqueam and other Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by Musqueam or was otherwise available from publicly available sources. | Addressed | None |
| Absence of a comprehensive study of cumulative effects on the Fraser River | While the Ministry acknowledges that Musqueam is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project. The Ministry understands that Musqueam is discussing this request with other provincial and federal ministries and agencies. | Addressed | None |

ABORIGINAL CONSULTATION

Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.

Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.

In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs related to the exercise of Aboriginal Interests.

Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|--|----------------|--|
| <p>Consultation with Musqueam is required for any land disposition, including surplus lands potentially sold to adjacent farmers</p> | <p>As part of the Project, agricultural land will be protected as much as practical. Once the project is completed there will be a determination of surplus lands, if any, and disposition will follow the appropriate process including consultation.</p> | <p>Ongoing</p> | <p>Appropriate consultation will be undertaken on any disposition</p> |
| <p>Capacity funding to facilitate participation in the Project review process</p> | <p>The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. The Ministry is working with Musqueam on a Memorandum of Understanding that is intended to support Musqueam’s involvement in the EA Process and associated consultation. It is the Ministry’s understanding that Musqueam wishes to address Application Review Phase funding-related needs and concerns in the context of the MoU.</p> | <p>Ongoing</p> | <p>MOU-related discussions, including Application Review Phase funding</p> |
| <p>Appropriate use of information shared by Musqueam as it relates to confidentiality and dissemination</p> | <p>The Ministry understands and respects that certain information shared by Musqueam may be considered confidential. The Ministry is subject to the provisions of the <i>Freedom of Information and Protection of Privacy Act</i>. Subject to the requirements of applicable laws, the Ministry will respect Musqueam requests to keep information confidential.</p> | <p>Ongoing</p> | <p>MOU-related discussions, including provisions related to the use of information</p> |

| | | | |
|--|--|-----------|---|
| Musqueam requests a Musqueam-only site visit | Per this request, the Ministry undertook a site visit with Musqueam. No other Aboriginal Groups were present. | Addressed | None |
| Funding for Traditional Use Study | The Ministry signed a funding agreement with Musqueam which provided funding for a Traditional Use Study. Musqueam submitted a Project related study to the Ministry, but did not submit a Traditional Use Study. The Ministry is working with Musqueam with respect to the sharing of Traditional Use information and expects that related discussions will occur in the context of an MOU. | Ongoing | MOU-related discussions, including the sharing of Traditional Use information and study |

ABORIGINAL PARTICIPATION AND PROJECT-RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project's Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

- Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests
- Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes
- Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns
- Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes
- Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects
- Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.
- Incorporate community and traditional knowledge in Project components
- Document and report to EAO on the Ministry's Aboriginal consultation program at times specified by EAO.

| <p>Opportunities for cultural recognition and naming, art and interpretive signage. Funding for cultural interpretation and signage</p> | <p>The Ministry is exploring opportunities for cultural recognition and naming and will work with Musqueam on these opportunities and determine any related funding requirements.</p> | <p>Ongoing</p> | <p>Further engagement with Musqueam is planned to explore opportunities related to cultural recognition and naming, art and interpretive signage.</p> |
| <p>Project-related employment, training, contracting, and economic development opportunities. Adequate training time to take full advantage of potential future Project work activities</p> | <p>The Ministry is committed to working with Musqueam to identify potential employment, training, contracting and economic development. The Ministry acknowledges that Musqueam wants to prepare its membership for employment opportunities and will work with Musqueam to identify ways to support community preparedness.</p> | <p>Ongoing</p> | <p>MOU-related discussions, including identification of potential employment, training, contracting and economic development opportunities and timelines.</p> |
| <p>Interest in revenue sharing opportunities from tolling</p> | <p>The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. In accordance with the provincial tolling strategy, revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways.</p> | <p>Addressed</p> | <p>None</p> |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issue | Proponent Response | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Potential effects on salt wedge from decommissioning of the Tunnel</p> | <p>Potential Project-related effects of Tunnel removal on salt wedge from decommissioning the Tunnel are addressed in Sections 4.1 (River Hydraulics) and 4.4 (Fish and Fish Habitat) of the Application. The timing window during which the salinity of the water exceeds the threshold for irrigation is almost identical with and without the Tunnel. The Tunnel does not substantially protrude above the riverbed and removal will not affect the behaviour of the salt wedge in any significant way with respect to the availability of water that is suitable for irrigation or to fish and fish habitat.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4 (River Hydraulics Mitigation Measures) and 4.4.4 (Fish and Fish Habitat Mitigation Measures)</p> |
| <p>Potential effects on flow rates after Tunnel removal</p> | <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4 (River Hydraulics Mitigation Measures)</p> |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|--|--------------------------|--|
| Potential effects on sedimentation after Tunnel removal | No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 (Sediment and Water Quality Mitigation Measures) |
| Potential effects of run off and drainage along the highway corridor, including heavy metal transport from traffic to water and land, management of runoff from the bridge | The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. The bridge will collect and direct runoff to specifically designed biofiltration marshes at the bases of the main towers. The purpose of these biofiltration marshes is to naturally clean the water prior to re-entry into the ecosystem. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciate change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning is anticipated. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 (Sediment and Water Quality Mitigation Measures) |

| Issue | Proponent Response | Status | Next Steps by Proponent |
|---|--|---------------------------------|-------------------------|
| <p>Effect of shipping on carbon dioxide levels in the water, concern with effluent acidity levels and carbon outputs from ships affecting water and air quality</p> | <p>This is outside the scope of the Project. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river.</p> | <p>Addressed in Application</p> | <p>None</p> |
| <p>Use and disposal of dredged and other material in the river</p> | <p>The minimal amount of dredged sediment will be placed on a barge as will sections of the concrete mattress and brought to shore for applicable testing prior to disposal/recycling. The shot rock removed will be stored on shore and potentially reused as further protection to the Metro Vancouver watermain just downstream of the project.</p> | <p>Addressed in Application</p> | <p>None</p> |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|--|---|---|
| Protection of Musqueam 's rights to harvest under the Sparrow decision | The Ministry acknowledges the Sparrow decision of May 1990 and Musqueam's established right to fish for food, social and ceremonial purposes in the area of Canoe Pass on the South Arm of the Fraser River. The Ministry is committed to avoiding or mitigating any potential effects on fish and fish habitat. | Acknowledged and addressed in Application | Ongoing consultation and implementation of mitigation measures in Section 4.4.4 (Fish and Fish Habitat Mitigation Measures) |
| Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, salmon | The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon, salmon to Musqueam and is committed to avoiding or mitigation any potential effects | Addressed in Application | Implementation of mitigation measures outlined in Section 4.4.4 (Fish and Fish Habitat Mitigation Measures) |
| Importance of Musqueam Fisheries Department reviewing Green Slough concept | The Ministry will continue to meet with Musqueam's Fisheries Department on the Green Slough concept and any other component of the Project. The Green Slough concept has been shared with Musqueam, including representatives of Musqueam Fisheries Department, for input. | Ongoing | Ministry will continue to meet with Musqueam's Fisheries Department |
| Importance of sloughs, tributaries (Serpentine River), riparian work for fish stocks | Fish and fish habitat is discussed in Section 4.4 (Fish and Fish Habitat). The Ministry acknowledges the importance of sloughs, tributaries and riparian areas for fish stocks and is undertaking enhancement and riparian works. The Ministry will continue to seek Musqueam's input in the development of related plans. | Addressed in Application | Ministry will continue to seek Musqueam's input in the development of plans |

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Potential effects of pile driving, blasting and underwater noise generated by Tunnel decommissioning and other construction activities.</p> | <p>There will be no direct pile driving in the river. Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shallow water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Sections 4.3.4 (Underwater Noise Mitigation Measures 4.4.4 (Fish and Fish Habitat Mitigation Measures))</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.
 Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan
 Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---|--|
| Protection of Musqueam 's Aboriginal Interests – availability, quality, experience tied to traditional use of marine mammal resources for traditional purposes.. | The Ministry acknowledges the Sparrow decision of May 1990 and Musqueam's established right to fish for food, social and ceremonial purposes in the area of Canoe Pass on the South Arm of the Fraser River. The Ministry is committed to avoiding or mitigation any potential effects on marine mammals. | Acknowledged and addressed in Application | Ongoing consultation and implementation of mitigation measures in Section 4.6.4 (Marine Mammals Mitigation Measures) |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail marsh that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management plan included in the Construction Environmental Management Plan

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|--|--|
| <p>Protection of Musqueam 's Aboriginal Interests – availability, quality, experience tied to traditional use of vegetation resources for traditional purposes.</p> | <p>The Ministry acknowledges the Sparrow decision of May 1990 and Musqueam's established right to fish for food, social and ceremonial purposes in the area of Canoe Pass on the South Arm of the Fraser River. The Ministry is committed to avoiding or mitigation any potential effects on vegetation.</p> | <p>Acknowledged and addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures in Section 4.7.4 (Vegetation Mitigation Measures)</p> |
| <p>Invasive plant species and proposed plans to manage presence during construction</p> | <p>Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.7.4 (Vegetation Mitigation Measures) of the Application</p> |
| <p>Culturally significant plants should be used in planting plans</p> | <p>Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Musqueam on the development of these plans.</p> | <p>Addressed</p> | <p>The Ministry will develop planting plans with consultation from Musqueam</p> |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---|---|
| Protection of Musqueam’s Aboriginal Interests – availability, quality, and experience tied to traditional use of terrestrial wildlife resources for traditional purposes. | The Ministry acknowledges the Sparrow decision of May 1990 and Musqueam’s established right to fish for food, social and ceremonial purposes in the area of Canoe Pass on the South Arm of the Fraser River. The Ministry is committed to avoiding or mitigation any potential effects on terrestrial wildlife. | Acknowledged and addressed in Application | Ongoing consultation and implementation of mitigation measures in Section 4.8.4 (Terrestrial Wildlife Mitigation Measures) of the Application |

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|---|
| Potential light effects on wildlife | The Ministry understands that Musqueam is concerned with the potential effects of light on wildlife. Lighting design will address safety requirements while still adhering to best management practices to minimize sensory disturbance to terrestrial wildlife. | Addressed in Application | Implementation of mitigation measures outlined in Sections 4.8.4 (Terrestrial Wildlife Mitigation Measures) and 4.10 (Atmospheric Noise) of the Application |
| Potential noise effects on wildlife | The Ministry understands that Musqueam is concerned with the potential effects of noise on wildlife. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. | Addressed in Application | Implementation of mitigation measures outlined in Sections 4.8.4 (Terrestrial Wildlife Mitigation Measures) and 4.10 (Atmospheric Noise) of the Application |
| Potential effects of the bridge structure on species such as mammals, waterfowl and migratory birds, particular concern for the importance of protecting eagles. | The Ministry understands that Musqueam is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.8.4 (Terrestrial Wildlife Mitigation Measures) of the Application |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Development of an Air Quality and Dust Control Management Plan for inclusion of the Construction Environmental Management Plan.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------|-------------------------|
| Consideration of the airport in air quality assessment | Vancouver International Airport and Boundary Bay Airport were taken into consideration in the assessment of baseline studies for Air Quality. | Addressed | None |
| RAA is too large to properly measure cumulative effects of “intensified” industrial development on the South Arm of the Fraser River. MIB should be consulted directly regarding necessary boundaries. | | | |

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry’s 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Noise monitoring program.

Site specific schedules and activities.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Musqueam has not voiced specific concerns regarding Atmospheric Noise. | | | |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

During construction, a measureable effect on access to instream locations for traditional use has been determined.

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|---|
| <p>Musqueam’s access to the Fraser River and the potential to displace fishing vessels.</p> <p>Potential interference with Musqueam fisheries during bridge construction and decommissioning of the Tunnel and the importance of working closely with Musqueam to ensure negative effects are avoided.</p> <p>Potential effects of construction during fishing season on fishing activities and access to the River.</p> <p>Impacts of Tunnel decommissioning on Musqueam fisheries, specifically as it relates to timing.</p> | <p>Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction. Mitigation of these effects will include the development and implementation of a specific MIB marine use protocol through direct consultation with MIB. Further mitigation can be achieved through the development and implementation of a Marine Access Management Plan for inclusion of the CEMP, establishment of communications protocols, appropriate lighting and marking for safe navigation, and establishment of navigation protection zones during construction.</p> <p>The Ministry understands the importance of working closely with Musqueam to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in 5.2.4 (Marine Use Mitigation Measures)</p> |
| <p>Inappropriateness/ inadequacy of marine users group for consultation with Musqueam</p> <p>Marine users group is not an appropriate format to address Musqueam concerns</p> | <p>The Ministry is continuing to work with Musqueam to better understand how they would like to participate in the development and implementation of mitigation measures in particular, in relation to alternatives to a marine users group. The Ministry has requested Musqueam input to ensure Musqueam’s concerns are discussed and addressed in an appropriate manner and looks forward to obtaining Musqueam’s feedback in this regard.</p> | <p>Ongoing</p> | <p>Ongoing consultation. The Ministry anticipates that plans related to Application Review consultation with Musqueam will be defined in the MoU.</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Address temporary effects on existing land use during construction and incorporate land use considerations into a Traffic Management Plan.

Incorporate land use considerations into a Marine Access Management Plan.

Reconnect recreational trails.

Residual & Cumulative Effects

There is a high, short-term probability of disturbance to residential, commercial and industrial land uses.

There is a high, short-term probability of disturbance to recreational uses near the new bridge.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|---|
| <p>Project will facilitate increased development around the new Bridge and expansion of marina at Deas Slough</p> | <p>The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect overall regional growth trends of current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.</p> | <p>Addressed</p> | <p>None</p> |
| <p>Impacts of staging/laydown areas. Request that the Ministry provide construction parameters to avoid impacting areas around Project footprint.</p> | <p>The Application has been developed with the assumption that all temporary and permanent works will be included within the Project alignment. Potential staging areas that will be made available to the contractor encompass areas within the highway right-of-way that have been previously developed and disturbed.</p> <p>Any temporary or permanent works that are to take place will be subject to applicable permitting requirements, including <i>Water Sustainability Act</i> permitting and archaeological investigation if required. Applications for these permits will include detailed descriptions and locations of works to take place.</p> <p>If the contractor chooses to develop staging areas on sites other than those identified, site-specific environmental permitting and approvals will be obtained by the contractor.</p> | <p>Addressed</p> | <p>Contractor will obtain permits and approvals as required</p> |

5.5 VISUAL QUALITY

The new bridge will add noticeable visual features to the landscape and will change visual conditions adjacent to the Project alignment. Replacement of interchanges also has the potential to change visual conditions of these locations. At distances greater than one kilometer, the bridge deck will merge with the natural landscape and the main visual features will be the bridge towers. Changes in visual quality at interchanges will be minor as visual quality in such areas is currently influenced by existing transportation infrastructure.

Effects

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Minimize effects through Project design.

Use of vegetated buffers to minimize visual effects to residential developments within close proximity to the bridge in Delta.

Residual & Cumulative Effects

There is a moderate, long-term probability of disturbance to visual quality.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Musqueam has not voiced specific concerns regarding Visual Quality. | | | |

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a chance find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|--|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites. Protection of cultural and archaeological sites that are known to exist or may be discovered within the Project area</p> | <p>The Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Musqueam. Musqueam has been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment. Appropriate measures will be taken to ensure the protection of archaeological and heritage resources.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4 (Heritage Resources Mitigation Measures)</p> |

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------|---|
| Participation in archaeological fieldwork and review of archaeological draft reports | Musqueam participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports. | Ongoing | Musqueam will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports. |
| Ministry's archaeological consultant will not work effectively with Aboriginal Groups based on experience on past projects | The Ministry worked with Musqueam to resolve this concern. | Addressed | None |
| Concern with the involvement of certain Aboriginal groups in archaeological fieldwork for the Project. | Schedule B Aboriginal groups were invited to participate in the archaeological component of the Project. | Addressed | None |

7.0 UMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

During construction, a measureable effect on access to instream locations for traditional use has been determined.

7.0 UMAN HEALTH

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.

Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on human health are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------|-------------------------|
| Consideration of municipal and regional health plans related to human health | Municipal and regional health plans were considered in the assessment of potential Project-related effects on human health, including community and social factors. | Addressed | None |

| 8.0 ACCIDENTS AND MALFUNCTIONS | | | |
|--|---|---------------|--|
| <p>Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.</p> <p>In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance.</p> | | | |
| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | An Emergency Response and Spill Contingency Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills | Addressed | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |

| OTHER ISSUES | | | |
|---|---|---------------|--------------------------------|
| Consultation with Cowichan Nation Alliance identified issues outside of the environmental assessment process, Aboriginal Interests, Aboriginal Consultation, Aboriginal Participation and Project-Related Opportunities, and sections of the Application. | | | |
| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
| Concerns related to dredging, potential for increased vessel traffic and larger vessels resulting from Tunnel decommission | Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River today. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application. | Addressed | None |

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. Environmental Assessment Act (B.C. EAA), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. EAA sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. EAA, and that it requires an EAC.

The Project as proposed is not subject to review under the Canadian Environmental Assessment Act, 2012, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the Environmental Assessment Act.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------------|-------------------------|
| Social and cultural effects and the adequacy of EA methodology | <p>Concerns related to the adequacy of Environmental Assessment are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Social and cultural effects of the project are considered in Part C of the Environmental Assessment Application (Application). Where Aboriginal Groups values and perspectives have been provided to the Proponent regarding environmental, economic, social, heritage or health valued components (VCs), they have been incorporated, where applicable into the Part B assessment of those VCs.</p> | Referred to EAO | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|--------------------------------------|
| Strength of Claim assessment and related depth of consultation. | Concerns related to the strength of claim assessment have been referred to EAO and MARR. | Referred to EAO and MARR | None |
| Project's EA Process and its associated timelines. | Concerns relating to the EA process and its associates timelines were referred to EAO. EAO issued a memo to members of the Working Group on March 18, 2016 in response to questions and concerns related to the EA process and its associated timelines. The Ministry understands that EAO responded to Penelakut Tribe's queries regarding the EA Process and associated timelines. | Referred to EAO | None |
| Effectiveness and nature of the EA process as well as current volume of EAs underway | Concerns relating to the broad concern related to the effectiveness and nature of the Environmental Assessment Process have been referred to EAO. While the Ministry is unable to address the concern related to the current volume of EA's underway, the Ministry has and will continue to work with Penelakut Tribe to support their participation in this particular Project's review process and to plan for consultation activities in a manner that is mindful of the current volume of referrals that Penelakut Tribe is working on. Support to date has included Pre-Application capacity funding. | Referred to EAO | None |
| Lack of resources and funding for First Nations communities. | The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. | Addressed | Funding for Application Review Phase |

ABORIGINAL INTERESTS

There are potential Project related impacts to Penelakut Tribe's title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape

Quality of experience while engaged in or tied to traditional use

- cultural landscape

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

Quality of experience while engaged in or tied to traditional use

- changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
- Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Penelakut Tribes as a result of the Project are not expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Potential impacts to Penelakut Tribe’s title, Rights and culture. Identification of future developments should include potential Penelakut Tribe’s title and rights resulting from treaty negotiations or proof of title.</p> | <p>Potential Project related impacts to Penelakut Tribe’s title, Rights and culture, the level of effect predicted, and mitigation measures are outlined the Application. The Ministry will continue to consult with Penelakut Tribe to ensure any effects are minimized.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application</p> |
| <p>Identification of “other requirements that are relevant to the Project, including international agreements or other agreements” should be included in the Crown’s Constitutional obligations to First Nations“</p> | <p>The Crown’s constitutional obligations are fundamental to consultation with Penelakut Tribe and the EA process. The obligations within the context of the EA are addressed in Part C of the Application.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation</p> |
| <p>“Consideration for future uses should include Cowichan Nation Alliance’s plans to re-establish a site on λəqtinəs/Tl’uqtinus site for residential and/or commercial purposes.”</p> | <p>Noted</p> | <p>Noted</p> | <p>Ongoing consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Penelakut Tribe’s access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel.</p> | <p>Penelakut Tribe’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A measurable direct effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation measures outlined in Section 5.2.4</p> |
| <p>Social effects of the Project such as Penelakut Tribe’s knowledge transmission, language loss, dependency and social interaction.</p> | <p>Social effects of the Project on Penelakut Tribe’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation measures outlined in all sections of the Application</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| | <p>predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3 and Section 10.3 of the Application.</p> | | |
| <p>Protection of Penelakut Tribe’s rights to harvest within the Project area.</p> | <p>Penelakut Tribe’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures outlined in Table 10.3-1 and Section 10.1.3.4, residual effects on the exercise of Aboriginal Interests by Penelakut Tribe as a result of the Project are not expected.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and Implementation of measures outlined in Section 10.1.3.4</p> |
| <p>Assessment of cumulative effects in regards to the inclusion of other reasonably foreseeable projects and activities.</p> | <p>The Ministry’s cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed.</p> | <p>Addressed</p> | <p>None</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|-------------------------|
| Concern that the overlapping construction period of GMT and Pattullo projects needs to be considered in the assessment. | Rehabilitation of the Pattullo Bridge will be completed by October 2016. The replacement of the Pattullo bridge is in planning stages and a construction period has yet to be established. | Addressed | None |
| Consideration of cumulative effects on aboriginal rights, including measurement against a pre-industrial baseline | The Application will include historical context as outlined relating to changes in use over time by Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by First Nations or was otherwise available from publicly available sources. However, there is no EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests. | Addressed | None |
| Absence of a comprehensive study of cumulative effects on the Fraser River | While the Ministry acknowledges that Penelakut Tribe is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|-------------------------|
| Length of time tolls are in place | <p>The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |
| Revenue sharing opportunities from tolling | <p>Revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |

| ABORIGINAL CONSULTATION | | | |
|---|---|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.</p> <p>Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process | Penelakut Tribe received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Penelakut Tribe as it relates to confidentiality and dissemination | The Ministry understands and respects that certain information shared by Penelakut Tribe may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Penelakut Tribe requests to keep information confidential. | Addressed | Appropriate use of confidential information |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|---|
| Funding for Traditional Use Study | The Ministry signed funding agreements with Penelakut Tribe which provided funding for a Traditional Use Study. | Addressed | None |
| Capacity funding to facilitate participation in the Project review process | Penelakut Tribe received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Penelakut Tribe as it relates to confidentiality and dissemination | The Ministry understands and respects that certain information shared by Penelakut Tribe may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Penelakut Tribe requests to keep information confidential. | Addressed | Appropriate use of confidential information |
| Funding for Traditional Use Study | The Ministry signed funding agreements with Penelakut Tribe which provided funding for a Traditional Use Study. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project’s Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

- Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests
- Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes
- Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns
- Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes
- Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects
- Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.
- Incorporate community and traditional knowledge in Project components
- Document and report to EAO on the Ministry’s Aboriginal consultation program at times specified by EAO.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------|--|
| Opportunities for cultural recognition and naming | The Ministry is exploring opportunities for cultural recognition and naming and will to work with Penelakut Tribe on this matter. | Ongoing | Further engagement with Penelakut Tribe is planned to explore opportunities related to cultural recognition and naming, art and interpretive signage |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

| <p>Project-related employment, training, contracting, and economic development opportunities.</p> <p>Equity and revenue sharing for Penelakut Tribe and importance of initiating related discussions with Penelakut Tribe during Pre-Application Stage.</p> <p>Aboriginal procurement policy.</p> | <p>The Ministry is committed to working with Penelakut Tribe to identify potential opportunities to benefit from the Project. The Ministry acknowledges that Penelakut Tribe wants to prepare its membership for employment opportunities and will work with Penelakut Tribe to identify ways to support community preparedness.</p> | <p>Ongoing</p> | <p>The Ministry will share information including identification of potential employment, training, contracting and economic development opportunities as it becomes available to support community preparedness. The Ministry welcomes input from Penelakut Tribe on the type of information that would be useful.</p> |
| <p>Interest in land recovery at Green Slough</p> | <p>As part of the Project, agricultural land will be protected as much as practical. Once the project is completed, there will be a determination of surplus lands, if any, and disposition will follow the appropriate process including consultation.</p> | <p>Addressed</p> | <p>Determination of surplus lands and consultation</p> |
| <p>Interest in surplus Agricultural Land Reserve (ALR) lands being provided to Penelakut Tribe for creation of a gas station or other businesses</p> | <p>As part of the Project, agricultural land will be protected as much as practical. Once the project is completed, there will be a determination of surplus lands, if any, and disposition will follow the appropriate process including consultation.</p> | <p>Addressed</p> | <p>Determination of surplus lands and consultation</p> |
| <p>Penelakut Tribe, must be consulted for any land disposition - specific concern regarding surplus lands being sold to adjacent farmers</p> | <p>As part of the Project, agricultural land will be protected as much as practical. Once the project is completed, there will be a determination of surplus lands, if any, and disposition will follow the appropriate process including consultation.</p> | <p>Addressed</p> | <p>Determination of surplus lands and consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|-----------|--|
| Importance of Fraser Richmond Lands/Cowichan Village site to Cowichan Nation Alliance, particularly Penelakut Tribe, and the importance of considering future land recovery in land use and Project planning | Noted | Noted | None |
| City of Richmond’s land use planning process does not consider the Cowichan Nation Alliance’s potential future reclamation of the Fraser Richmond Lands - City of Richmond is working with the Ministry, but not with the Penelakut Tribe with respect to land use planning | Noted. Penelakut Tribe concerns have been referred to the City of Richmond | Addressed | None |
| Adequate training time to take full advantage of potential future Project work activities | The Ministry is committed to working with Penelakut Tribe to identify potential opportunities to benefit from the Project. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Penelakut Tribe to identify ways to support community preparedness. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful. |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Development of a mitigation plan to ensure protection to the Lulu-island-Delta water main.

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|--|
| <p>Change in flow rates after Tunnel removal</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm.</p> <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. River Hydraulics and River Morphology are addressed in Section 4.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4</p> |
| <p>Factoring in extreme weather events in River Hydraulics model</p> | <p>Extreme weather events are considered and planned for. River Hydraulics and River Morphology are addressed in Section 4.1.4.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|--|
| <p>Potential for contaminants in the tunnel and how this may affect tunnel decommissioning.</p> | <p>The Ministry will consult with Fisheries and Oceans Canada and Port Metro Vancouver regarding Tunnel decommissioning, and will incorporate the requirements of these agencies in the planning and implementation of decommissioning activities.</p> <p>If potentially hazardous building materials are identified in the Tunnel, a detailed plan for removing and appropriately disposing of such material will be developed prior to initiating decommissioning activities. Any potentially hazardous material identified will be managed in accordance with applicable legislation, including the B.C. Hazardous Waste Regulation, B.C. Reg. 63/88, and the Workers' Compensation Board of B.C. Occupational Health and Safety Regulation, B.C. Reg. 296/97.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.1.4 and 4.2.4</p> |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Project activities undertaken in the upland ditch systems will follow Standards and Best Practices for Instream Works.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|--|
| <p>Potential effects of run off and drainage</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.2.4</p> |
| <p>Effect of the Tunnel on dissolved oxygen content within the river.</p> | <p>The Ministry is following up with Penelakut Tribe to obtain further clarification regarding their concern regarding the effect of the Tunnel on dissolved oxygen content within the river.</p> | <p>Ongoing</p> | <p>Clarification regarding concern</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Impact of potential pollutants and contaminants within the tunnel walls on the river if left in place. | The tunnel decommissioning is anticipated to involve the removal of the four in-river sections of the Tunnel. | Addressed | None |
| Improved ditches will result in less filtering of deleterious materials | Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Sediment and Water Quality is addressed in Section 4.2 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 |
| Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River. | Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application. | Addressed in Application | None |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term potential of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|--|
| <p>Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon</p> | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to Penelakut Tribe. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.4.4</p> |
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.3.4 and 4.4.4</p> |

| 4.6 MARINE MAMMALS | | | |
|--|---------------------------|--------|-------------------------|
| <p>Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River.</p> <p>Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.</p> <p><u>Effects</u></p> <p>A negligible effect on the availability of marine mammal resources for traditional use has been determined.</p> <p>A negligible effect on quality of marine mammal resources for traditional use has been determined.</p> <p>A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.</p> <p><u>Mitigation</u></p> <p>Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.</p> <p>Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan</p> <p>Monitor underwater noise.</p> <p><u>Cumulative Effects</u></p> <p>No significant Project-related residual or cumulative effects on marine mammals are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Penelakut Tribe has not voiced any specific issues or concerns with respect to Marine Mammals. | | | |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail marsh that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management plan will be included in the Construction Environmental Management Plan

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|--|
| <p>Invasive plant species and proposed plans to manage presence during construction</p> | <p>Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.7.4</p> |
| <p>Culturally significant plants should be used in planting plans</p> | <p>Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans.</p> | <p>Addressed</p> | <p>The Ministry will develop planting plans with consultation from Aboriginal Groups</p> |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Potential light and noise effects on wildlife and fish.</p> | <p>The Ministry understands that Penelakut Tribe is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
| <p>Potential effects of the bridge structure on species such as waterfowl and migratory birds.</p> | <p>The Ministry understands that Penelakut Tribe is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects
 No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation
 Minimize effects through Project design.
 Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.
 Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects
 No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--------|---------------------------|--------|-------------------------|
|--------|---------------------------|--------|-------------------------|

| | | | |
|--|---|---------------------------------|--|
| <p>Potential effects to air quality, particularly as it relates to terrestrial wildlife.</p> | <p>The Ministry understands that Cowichan Tribes is concerned with the potential effects of air quality, particularly on terrestrial wildlife species. Projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
|--|---|---------------------------------|--|

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry's 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Noise monitoring program.

Site specific schedules and activities.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Increase in traffic and consequent increase in associated noise and vibration due to the increases capacity of the new bridge.</p> | <p>The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new Bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment, after mitigation, are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the Highway but do not exceed what is acceptable for residential, educational or institutional facilities. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |
| <p>Choice of building materials in relation to noise and vibration</p> | <p>The Ministry confirms that appropriate building materials will be used to mitigate noise and vibration. Mitigation in accordance with the Ministry’s 2014 Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways will be implemented, as warranted, at select locations to avoid or minimize potential Project-related increase in post-construction noise levels. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

During construction, a measureable effect on access to instream locations for traditional use has been determined.

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Potential effects of construction during fishing season on fishing activities. Impacts of Tunnel decommissioning on Aboriginal fisheries, specifically as it relates to timing.</p> <p>“The proposed project has a direct impact on how we are able to use and navigate the areas surrounding the proposed project, and the impact of the project as it limits this ability needs to be considered in the Aboriginal Interests Assessment.”</p> <p>“Future exercise of our Aboriginal rights to fish (and also to harvest) including in-water and upland of the South arm of the Fraser should be considered when assessing project impacts of our interests.”</p> | <p>Potential interference with Penelakut Tribe fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |
| <p>Facilitation of increased shipping in the river</p> | <p>The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river.</p> | <p>Addressed</p> | <p>None</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Residual & Cumulative Effects

There is a low, short-term probability of disturbance to residential, commercial and industrial land use during construction.

There is a moderate , short-term probability of disturbance to recreational users near the new bridge during construction

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|-----------|---|
| Interest in surplus Agricultural Land Reserve (ALR) lands being provided to Penelakut Tribe for creation of a gas station or other businesses | As part of the Project, agricultural land will be protected as much as practical. Once the project is completed, there will be a determination of surplus lands, if any, and disposition will follow the appropriate process including consultation. | Addressed | Determination of surplus lands and consultation |

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a chance find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites and specific concern for any effects on the ǻǻqtinǻs/TI'uqtinus site and potential archaeological values at interchanges</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Penelakut Tribe.</p> <p>All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment.</p> <p>Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |
| <p>Participation in archaeological fieldwork and review of archaeological draft reports</p> | <p>Penelakut Tribe participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports.</p> | <p>Addressed</p> | <p>Penelakut Tribe will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports.</p> |
| <p>Ethnographical content in reports does not accurately reflect Penelakut Tribe's historical presence within the Project area</p> | <p>The Ministry noted Penelakut Tribe's concern that ethnographical content in Project reports does not accurately reflect Penelakut Tribe's historical presence within the Project area. The Ministry continues to work with Penelakut Tribe to address this concern.</p> | <p>Ongoing</p> | <p>Ongoing consultation</p> |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

A negligible effect on access to instream locations for traditional use has been determined.

7.0 HUMAN HEALTH

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.
 A negligible effect on access to upland locations for traditional use has been determined.
 A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation
 Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.
 Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

Residual & Cumulative Effects
 No significant Project-related residual or cumulative effects on human health are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

| | Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects. | | |
| New Bridge could “unleash pent-up demand” and create even more congestion | The Project has been designed to address issues related to current and future traffic safety, congestion and reliability, and to help achieve regional mode share targets by facilitating travel across the Fraser River by transit, HOVs, cycling and walking. During operations, the Project will provide travel time savings for commuters or 25-35 minutes per day, improve safety with a forecast 35 percent reduction in collisions, and support provincial and regional strategies to encourage mode shift to transit and carpooling. As proposed, Project-related improvements, including tolling, will moderate traffic growth while effectively serving forecast demand at the crossing. | Addressed | None |

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. Environmental Assessment Act (B.C. EAA), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. EAA sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. EAA, and that it requires an EAC.

The Project as proposed is not subject to review under the Canadian Environmental Assessment Act, 2012, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the Environmental Assessment Act.

| Social and cultural effects and the adequacy of EA methodology | <p>Concerns related to the adequacy of Environmental Assessment are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Social and cultural effects of the project are considered in Part C of the Environmental Assessment Application (Application). Where Aboriginal Groups values and perspectives have been provided to the Proponent regarding environmental, economic, social, heritage or health valued components (VCs), they have been incorporated, where applicable into the Part B assessment of those VCs.</p> | Referred to EAO | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|-------------------------|
| Strength of Claim assessment and related depth of consultation. | Concerns related to the strength of claim assessment have been referred to EAO and MARR. | Referred to EAO and MARR | None |
| Project’s EA Process and its associated timelines. | Concerns relating to the EA process and its associates timelines were referred to EAO. EAO issued a memo to members of the Working Group on March 18, 2016 in response to questions and concerns related to the EA process and its associated timelines. The Ministry understands that EAO responded to Stz’uminus First Nation’s queries regarding the EA Process and associated timelines. | Referred to EAO | None |
| Effectiveness and nature of the EA process as well as current volume of EAs underway | Concerns relating to the broad concern related to the effectiveness and nature of the Environmental Assessment Process have been referred to EAO. While the Ministry is unable to address the concern related to the current volume of EA’s underway, the Ministry has and will continue to work with Stz’uminus First Nation to support their participation in this particular Project’s review process and to plan for consultation activities in a manner that is mindful of the current volume of referrals that Stz’uminus First Nation is working on. Support to date has included Pre-Application capacity funding. | Referred to EAO | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------|--------------------------------------|
| Lack of resources and funding for First Nations communities. | The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. | Addressed | Funding for Application Review Phase |

ABORIGINAL INTERESTS

There are potential Project related impacts to Stz’uminus First Nation’s title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape

Quality of experience while engaged in or tied to traditional use

- cultural landscape

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

Quality of experience while engaged in or tied to traditional use

- changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
- Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Stz’uminus First Nation as a result of the Project are not expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Potential impacts to Stz’uminus First Nation’s title, Rights and culture. Identification of future developments should include potential Stz’uminus First Nation’s title and rights resulting from treaty negotiations or proof of title.</p> | <p>Potential Project related impacts to Stz’uminus First Nation’s title, Rights and culture, the level of effect predicted, and mitigation measures are outlined the Application. The Ministry will continue to consult with Stz’uminus First Nation’s to ensure any effects are minimized.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application</p> |
| <p>Identification of “other requirements that are relevant to the Project, including international agreements or other agreements” should be included in the Crown’s Constitutional obligations to First Nations“</p> | <p>The Crown’s constitutional obligations are fundamental to consultation with Stz’uminus First Nation and the EA process. The obligations within the context of the EA are addressed in Part C of the Application.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation</p> |
| <p>“Consideration for future uses should include Cowichan Nation Alliance’s plans to re-establish a site on Łæqtinəs/Tl’uqtinus site for residential and/or commercial purposes.”</p> | <p>Noted</p> | <p>Noted</p> | <p>Ongoing consultation</p> |

| <p>Stz’uminus First Nation’s access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel.</p> | <p>Stz’uminus First Nation’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A measurable direct effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation measures outlined in Section 5.2.4</p> |
| <p>Social effects of the Project such as Stz’uminus First Nation’s knowledge transmission, language loss, dependency and social interaction.</p> | <p>Social effects of the Project on Stz’uminus First Nation’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation measures outlined in all sections of the Application</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| | <p>predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3 and Section 10.3 of the Application.</p> | | |
| <p>Protection of Stz’uminus First Nation’s rights to harvest within the Project area.</p> | <p>Stz’uminus First Nation’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures outlined in Table 10.3-1 and Section 10.1.3.4, residual effects on the exercise of Aboriginal Interests by Stz’uminus First Nation as a result of the Project are not expected.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and Implementation of measures outlined in Section 10.1.3.4</p> |
| <p>Assessment of cumulative effects in regards to the inclusion of other reasonably foreseeable projects and activities.</p> | <p>The Ministry’s cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed.</p> | <p>Addressed</p> | <p>None</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|-------------------------|
| Concern that the overlapping construction period of GMT and Pattullo projects needs to be considered in the assessment. | Rehabilitation of the Pattullo Bridge will be completed by October 2016. The replacement of the Pattullo bridge is in planning stages and a construction period has yet to be established. | Addressed | None |
| Consideration of cumulative effects on aboriginal rights, including measurement against a pre-industrial baseline | The Application will include historical context as outlined relating to changes in use over time by Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by First Nations or was otherwise available from publicly available sources. However, there is no EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests. | Addressed | None |
| Absence of a comprehensive study of cumulative effects on the Fraser River | While the Ministry acknowledges that Stz’uminus First Nation is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|-------------------------|
| Length of time tolls are in place | <p>The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |
| Revenue sharing opportunities from tolling | <p>Revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |

| ABORIGINAL CONSULTATION | | | |
|---|---|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.</p> <p>Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process | Stz’uminus First Nation received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Stz’uminus First Nation as it relates to confidentiality and dissemination | The Ministry understands and respects that certain information shared by Stz’uminus First Nation may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Stz’uminus First Nation requests to keep information confidential. | Addressed | Appropriate use of confidential information |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|---|
| Funding for Traditional Use Study | The Ministry signed a funding agreement with Stz’uminus First Nation which provided funding for a Traditional Use Study. | Addressed | None |
| Capacity funding to facilitate participation in the Project review process | Stz’uminus First Nation received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Stz’uminus First Nation as it relates to confidentiality and dissemination | The Ministry understands and respects that certain information shared by Stz’uminus First Nation may be considered confidential. However, subject to the requirements of applicable laws, the Ministry will respect Stz’uminus First Nation requests to keep information confidential. | Addressed | Appropriate use of confidential information |
| Funding for Traditional Use Study | The Ministry signed a funding agreement with Stz’uminus First Nation which provided funding for a Traditional Use Study. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project’s Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests

Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes

Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns

Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes

Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects

Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.

Incorporate community and traditional knowledge in Project components

Document and report to EAO on the Ministry’s Aboriginal consultation program at times specified by EAO.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

| <p>Opportunities for cultural recognition and naming</p> | <p>The Ministry is exploring opportunities for cultural recognition and naming and will work with Stz’uminus First Nation on this matter.</p> | <p>Ongoing</p> | <p>Further engagement with Stz’uminus First Nation is planned to explore opportunities related to cultural recognition and naming, art and interpretive signage</p> |
| <p>Project-related employment, training, contracting, and economic development opportunities. Equity and revenue sharing for Stz’uminus First Nation and importance of initiating related discussions with Stz’uminus First Nation during Pre-Application Stage. Aboriginal procurement policy.</p> | <p>The Ministry is committed to working with Stz’uminus First Nation to identify potential opportunities to benefit from the Project. The Ministry acknowledges that Stz’uminus First Nation wants to prepare its membership for employment opportunities and will work with Stz’uminus First Nation to identify ways to support community preparedness.</p> | <p>Ongoing</p> | <p>The Ministry will share information including identification of potential employment, training, contracting and economic development opportunities as it becomes available to support community preparedness. The Ministry welcomes input from Stz’uminus First Nation on the type of information that would be useful.</p> |
| <p>Interest in land recovery at Green Slough</p> | <p>As part of the Project, agricultural land will be protected as much as practical. Once the project is completed, there will be a determination of surplus lands, if any, and disposition will follow the appropriate process including consultation.</p> | <p>Addressed</p> | <p>Determination of surplus lands and consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------|--|
| Adequate training time to take full advantage of potential future Project work activities | The Ministry is committed to working with Stz’uminus First Nation to identify potential opportunities to benefit from the Project. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Stz’uminus First Nation to identify ways to support community preparedness. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful. |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Development of a mitigation plan to ensure protection to the Lulu-island-Delta water main.

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Change in flow rates after Tunnel removal</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm.</p> <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor.</p> <p>River Hydraulics and River Morphology are addressed in Section 4.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4</p> |
| <p>Factoring in extreme weather events in River Hydraulics model</p> | <p>Extreme weather events are considered and planned for. River Hydraulics and River Morphology are addressed in Section 4.1.4.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|--|
| <p>Potential for contaminants in the tunnel and how this may affect tunnel decommissioning.</p> | <p>The Ministry will consult with Fisheries and Oceans Canada and Port Metro Vancouver regarding Tunnel decommissioning, and will incorporate the requirements of these agencies in the planning and implementation of decommissioning activities.</p> <p>If potentially hazardous building materials are identified in the Tunnel, a detailed plan for removing and appropriately disposing of such material will be developed prior to initiating decommissioning activities. Any potentially hazardous material identified will be managed in accordance with applicable legislation, including the B.C. Hazardous Waste Regulation, B.C. Reg. 63/88, and the Workers’ Compensation Board of B.C. Occupational Health and Safety Regulation, B.C. Reg. 296/97.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.1.4 and 4.2.4</p> |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Project activities undertaken in the upland ditch systems will follow Standards and Best Practices for Instream Works.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|---|
| Potential effects of run off and drainage | The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 |
| Effect of the Tunnel on dissolved oxygen content within the river. | The Ministry is following up with Stz’uminus First Nation to obtain further clarification regarding their concern regarding the effect of the Tunnel on dissolved oxygen content within the river. | Ongoing | Clarification regarding concern |
| Impact of potential pollutants and contaminants within the tunnel walls on the river if left in place. | The tunnel decommissioning is anticipated to involve the removal of the four in-river sections of the Tunnel. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|--|
| <p>Improved ditches will result in less filtering of deleterious materials</p> | <p>Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.2.4</p> |
| <p>Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River.</p> | <p>Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> | <p>Addressed in Application</p> | <p>None</p> |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term potential of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|---|
| Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon | The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to Stz’uminus First Nation. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in 4.4.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|--|
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.3.4 and 4.4.4</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.
 Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan
 Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Stz’uminus First Nation has not voiced any specific issues or concerns with respect to Marine Mammals. | | | |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail marsh that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management plan will included in the Construction Environmental Management Plan

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|---|
| Invasive plant species and proposed plans to manage presence during construction | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 |
| Culturally significant plants should be used in planting plans | Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans. | Addressed | The Ministry will develop planting plans with consultation from Aboriginal Groups |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Potential light and noise effects on wildlife and fish.</p> | <p>The Ministry understands that Stz’uminus First Nation is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
| <p>Potential effects of the bridge structure on species such as waterfowl and migratory birds.</p> | <p>The Ministry understands that Stz’uminus First Nation is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

|--------|---------------------------|--------|-------------------------|

| | | | |
|--|---|---------------------------------|--|
| <p>Potential effects to air quality, particularly as it relates to terrestrial wildlife.</p> | <p>The Ministry understands that Cowichan Tribes is concerned with the potential effects of air quality, particularly on terrestrial wildlife species. Projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
|--|---|---------------------------------|--|

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry’s 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Noise monitoring program.

Site specific schedules and activities.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Increase in traffic and consequent increase in associated noise and vibration due to the increases capacity of the new bridge.</p> | <p>The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new Bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment, after mitigation, are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the Highway but do not exceed what is acceptable for residential, educational or institutional facilities. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |
| <p>Choice of building materials in relation to noise and vibration</p> | <p>The Ministry confirms that appropriate building materials will be used to mitigate noise and vibration. Mitigation in accordance with the Ministry’s 2014 Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways will be implemented, as warranted, at select locations to avoid or minimize potential Project-related increase in post-construction noise levels. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

During construction, a measureable effect on access to instream locations for traditional use has been determined.

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Potential effects of construction during fishing season on fishing activities. Impacts of Tunnel decommissioning on Aboriginal fisheries, specifically as it relates to timing.</p> <p>“The proposed project has a direct impact on how we are able to use and navigate the areas surrounding the proposed project, and the impact of the project as it limits this ability needs to be considered in the Aboriginal Interests Assessment.”</p> <p>“Future exercise of our Aboriginal rights to fish (and also to harvest) including in-water and upland of the South arm of the Fraser should be considered when assessing project impacts of our interests.”</p> | <p>Potential interference with Stz’uminus First Nation fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |
| <p>Facilitation of increased shipping in the river</p> | <p>The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river.</p> | <p>Addressed</p> | <p>None</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Residual & Cumulative Effects

There is a low, short-term probability of disturbance to residential, commercial and industrial land use during construction.

There is a moderate , short-term probability of disturbance to recreational users near the new bridge during construction

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Stz’uminus First Nation has not voiced any specific issues or concerns with respect to Land Use | | | |

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a chance find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|--------------------------|--|
| Protection of archaeological and heritage resources, including intangible heritage sites and specific concern for any effects on the Łæqtinəs/Tl’uqtinus site and potential archaeological values at interchanges | Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Stz’uminus First Nation. All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment. Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1. | Addressed in Application | Implementation of mitigation measures as outlined in Section 6.1.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|------------------|---|
| <p>Participation in archaeological fieldwork and review of archaeological draft reports</p> | <p>Stz’uminus First Nation participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports.</p> | <p>Addressed</p> | <p>Stz’uminus First Nation will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports.</p> |
| <p>Ethnographical content in reports does not accurately reflect Stz’uminus First Nation’s historical presence within the Project area</p> | <p>The Ministry noted Stz’uminus First Nation’s concern that ethnographical content in Project reports does not accurately reflect Stz’uminus First Nation’s historical presence within the Project area. The Ministry continues to work with Stz’uminus First Nation to address this concern.</p> | <p>Ongoing</p> | <p>Ongoing consultation</p> |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

A negligible effect on access to instream locations for traditional use has been determined.

7.0 HUMAN HEALTH

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.
 A negligible effect on access to upland locations for traditional use has been determined.
 A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation
 Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.
 Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

Residual & Cumulative Effects
 No significant Project-related residual or cumulative effects on human health are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---|-------------------------|
| Aboriginal health is not currently being considered in the assessment | Aboriginal health was considered in the assessment of potential Project-related effects on human health, including community and social factors. Human Health is addressed in Section 7.1 of the Application. | Addressed in Assessment and Application | None |
| Current conditions along the foreshore and in the Fraser River are not properly understood and have not been considered in the Human Health Assessment | Current conditions along the foreshore were considered in the assessment of potential Project-related effects on human health, including community and social factors. Human Health is addressed in Section 7.1 of the Application. | Addressed in Assessment and Application | None |

8.0 ACCIDENTS AND MALFUNCTIONS

Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.
 In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|--------------------------|--|
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | As outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan), an Emergency Response and Spill Contingency Plan will be developed. The Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills. | Addressed in Application | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |
| Contaminants from automobile emission currently captured in Tunnel. New Bridge will send emissions directly into the air and Fraser River and settle on the foreshore | Automobile emissions are currently released from the Tunnel through a series of vents. Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|-------------------------|
| | <p>construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | | |
| <p>New Bridge could “unleash pent-up demand” and create even more congestion</p> | <p>The Project has been designed to address issues related to current and future traffic safety, congestion and reliability, and to help achieve regional mode share targets by facilitating travel across the Fraser River by transit, HOVs, cycling and walking. During operations, the Project will provide travel time savings for commuters or 25-35 minutes per day, improve safety with a forecast 35 percent reduction in collisions, and support provincial and regional strategies to encourage mode shift to transit and carpooling. As proposed, Project-related improvements, including tolling, will moderate traffic growth while effectively serving forecast demand at the crossing.</p> | <p>Addressed</p> | <p>None</p> |

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. *Environmental Assessment Act* (B.C. *EAA*), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. *EAA* sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. *EAA*, and that it requires an EAC.

The Project as proposed is not subject to review under the *Canadian Environmental Assessment Act, 2012*, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the *Environmental Assessment Act*.

ABORIGINAL INTERESTS

There are potential Project related impacts to Tseil-Waututh's title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape
- Quality of experience while engaged in or tied to traditional use
- cultural landscape

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

Quality of experience while engaged in or tied to traditional use

- changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
- Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Tseil-Waututh as a result of the Project are not expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|---|
| <p>Protection of Tsleil-Waututh Nation’s rights to harvest within the Project area.</p> | <p>Tsleil-Waututh’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures outlined in Table 10.3-1 and Section 10.1.3.4, residual effects on the exercise of Aboriginal Interests by Tsleil-Waututh as a result of the Project are not expected.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation of mitigation measures</p> |
| <p>Tsleil-Waututh Nation’s access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel and the importance of working closely with communities to ensure negative effects are avoided.</p> | <p>Tsleil-Waututh Nation’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A negligible effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation measures outlined in Section 5.2.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|---|
| <p>Social effects of the Project such as Tsleil-Waututh Nation’s knowledge transmission, language loss, dependency and social interaction.</p> | <p>Social effects of the Project on Tsleil-Waututh’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3.8 and Section 10.3 of Part C of the Application.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application</p> |
| <p>Cumulative effects:</p> <ul style="list-style-type: none"> • Consideration of cumulative effects on Aboriginal rights. • Assessment of cumulative effects in regards to the inclusion of other reasonably foreseeable projects and activities. | <p>The Application will include historical context as outlined relating to changes in use over time by Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by First Nations or was otherwise available from publicly available sources. However, there is no EAO requirement to assess incremental</p> | | |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------|-------------------------|
| <ul style="list-style-type: none"> Absence of a comprehensive study of cumulative effects on the Fraser River | <p>cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests.</p> <p>The Ministry’s cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed.</p> <p>While the Ministry acknowledges that Teleil- Waututh Nation is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project.</p> | | |

| ABORIGINAL CONSULTATION | | | |
|---|---|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.</p> <p>Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process | Tsleil-Waututh Nation received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Tsleil-Waututh Nation as it relates to confidentiality and dissemination | The Ministry understands and respects that certain information shared by Tsleil-Waututh Nation may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Tsleil-Waututh Nation requests to keep information confidential. | Addressed | Appropriate use of confidential information |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|-------------------------|
| Funding for Knowledge Study | The Ministry signed a funding agreement with Tsleil-Waututh Nation which provided funding for a Knowledge Study. | Addressed | None |
| Input into areas for potential habitat enhancement | Request noted. The Ministry will consult with Tsleil-Waututh and other Aboriginal groups. | Noted | Ongoing consultation |
| Importance of working with Tsleil-Waututh in accordance with their stewardship policy | Noted and considered in planning for consultation with Tsleil-Waututh. | Noted | Ongoing consultation |
| Importance in distinction between consultation and information sharing | Importance in distinction between consultation and information sharing was addressed in the Aboriginal Consultation Plan. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project's Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

- Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests
- Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes
- Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns
- Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes
- Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects
- Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.
- Incorporate community and traditional knowledge in Project components

Document and report to EAO on the Ministry's Aboriginal consultation program at times specified by EAO.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|--|
| Opportunities for cultural recognition and naming | The Ministry is exploring opportunities for cultural recognition and naming and will work with Tsleil-Waututh on this matter. | Ongoing | Discussion with Tsleil-Waututh to explore opportunities related to cultural recognition and naming, art and interpretive signage |
| Project-related employment, training, contracting, and economic development opportunities. | The Ministry is committed to working with Tsleil-Waututh to identify potential opportunities to benefit from the Project. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Tsleil-Waututh to identify ways to support community preparedness. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful. |
| Revenue sharing opportunities from tolling | Revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application. | Addressed | None |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|--|
| <p>Change in flow rates after Tunnel removal</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm.</p> <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor.</p> <p>River Hydraulics and River Morphology are addressed in Section 4.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4</p> |
| <p>Impact of Project on Deas and Tilbury Sloughs and Duck, Barber and Woodward Island complexes</p> | <p>Deas and Tilbury Sloughs and Duck, Barber and Woodward Island complexes are included in Section 4.1 of the Application.</p> <p>Removal of the Tunnel is not expected to have long term effects on Deas and Tilbury Sloughs and Duck, Barber and Woodward Island complexes.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4</p> |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|--|
| <p>Potential effects of run off and drainage - innovative stormwater solutions and bioengineering techniques</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected.</p> <p>Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.2.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|-------------------------|
| <p>Water quality and sediment issues: comprehensive understanding of potential ecological impacts and core sampling</p> | <p>Changes in sediment riverbed characteristics that have the potential to affect receptor VCs include changes in sediment composition and organic carbon content, and changes in sediment quality in terms of contaminant concentrations. Similarly, changes in the water column that have the potential to affect receptor VCs include changes in total suspended solids (TSS) and turbidity levels, or changes in ambient water chemistry. Therefore, Project-related study of water and sediment quality was designed to focus on these aspects. A literature review, gap analysis, and field program, as outlined in Table 4.2-1, were undertaken to establish existing conditions, and sediment fate predictions described in Section 4.1 River Hydraulics and River Morphology were used to identify potential Project-related effects of water quality and sediment quality in the Fraser River South Arm, Deas Slough, and Green Slough.</p> | <p>Addressed</p> | <p>None</p> |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

- A negligible effect on the availability of fish resources for traditional use has been determined.
- A negligible effect on quality of fish resources for traditional use has been determined.
- A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

- Avoid effects through Project design.
- Apply best management and environmental management practices.
- Develop Construction Environmental Management and Operational Environmental Management plans.
- Use timing windows for undertaking in-stream works.
- Erosion and sediment control.
- Habitat enhancement and offsetting.

Residual & Cumulative Effects

- There is a low, short-term probability of physical injury or mortality to fish through crushing or entrainment during the construction period.
- No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|---|
| Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon | The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application. | Addressed | Implementation of mitigation measures outlined in 4.4.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|-----------|---|
| Species of salmon | The Ministry will work with the BC Environmental Assessment Office to ensure that the methodology used to support the assessment of environmental values is consistent with current best practice and guidance materials that support the assessment of projects under the BC Environmental Assessment Act. | | |
| Evaluation on impacts to ecological services for all ecosystems within the vicinity of the Project | Pacific salmon species selected for Project-related baseline studies include Chinook salmon, Chum salmon, Coho salmon, Pink salmon, and Sockeye salmon. Using existing scientific and literature, baseline conditions will be described for all life history stages of each salmon species, with emphasis on those life history stages that use aquatic habitats within the Project Area. Fish sampling focused on potential rearing values within drainage ditches in Richmond and Delta, for which limited existing inventory information exists, has been incorporated into the baseline studies. | Addressed | Implementation of mitigation measures outlined in 4.4.4 |
| Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon | Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project- | Addressed | Implementation of mitigation measures outlined in 4.3.4 and 4.4.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|--|
| | <p>related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | | |
| <p>Disturbance to benthic and aquatic invertebrates and their habitat</p> | <p>Aquatic habitats, which include habitat for fish and other aquatic species (including benthic and aquatic invertebrates), will be a primary area of focus for the environmental assessment of the Project.</p> <p>Potential disturbance to benthic and aquatic invertebrates is not, on its own, proposed as a key area of study given the nature of the project and the aquatic habitats it overlaps with. Aquatic habitats overlapping with the Project occur within a section of the Fraser River that is dynamic, influenced by large flow variations and downstream transport of sand and organic matter. Therefore, aquatic and benthic invertebrate communities in the Project Area are expected to be resilient to physical disturbance. Given the temporary and short-term changes in flow and water quality expected from Project activities, it is anticipated that the benthic and aquatic invertebrates will recover rapidly from disturbance.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.3.4 and 4.4.4</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as impact pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.

Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|-------------------------|
| Effects on southern resident killer whales within 10 km of Project area | The Project is not anticipated to affect southern resident killer whales (SRKW). Based on the results of underwater noise modelling completed to date, underwater noise generated by Project-related activities is not predicted to extend outside of the Fraser River, and therefore will not affect SRKW. In addition, studies completed to date also indicate that SRKW prey (i.e., chinook salmon) in the Fraser River is not likely to be affected by the Project at a level that could affect the survival or recovery of SRKW. | Addressed | None |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail marsh that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management.

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|---|
| Invasive plant species and proposed plans to manage presence during construction | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed | Implementation of mitigation measures outlined in Section 4.7.4 |
| Culturally significant plants should be used in planting plans | Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans. | Addressed | The Ministry will develop planting plans with consultation from Aboriginal Groups |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|------------------|--|
| <p>Potential light and noise effects on wildlife and fish.</p> | <p>The Ministry understands that Tsleil-Waututh is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
| <p>Potential effects of the bridge structure on species such as waterfowl and migratory birds.</p> | <p>The Ministry understands that Tsleil-Waututh is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|--|
| <p>Wetland assessment (ecological services, productivity and biodiversity), particularly with respect to at-risk amphibians</p> | <p>At-risk amphibians were not detected within the Project alignment during field studies undertaken in 2014 and 2015. The potential for at-risk amphibians to occur within the Project alignment is low. Applying mitigation, including least-risk timing windows, and adherence to standard practices for undertaking in-stream works and highway maintenance activities, will ensure that Project-related effects on at-risk amphibians are addressed.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Table 4.5-6</p> |
| <p>Protection of large mammals including black-tail deer and clarification of WARS on Project area</p> | <p>The Wildlife Accident Reporting System (WARS) contains long-term wildlife-related accident records that provide wildlife data for a range of purposes, including highway planning (Sielecki 2003). Data collected through WARS helps improve understanding of where wildlife mortality is occurring such that measures can be taken to avoid or reduce such mortality. WARS data are primarily collected by highway maintenance crews.</p> <p>Due to previous development in areas directly adjacent to the existing right-of-way, habitat features for deer are absent. As such, large mammals have not been included as a valued component in the environmental assessment for the Project.</p> | <p>Addressed</p> | <p>None</p> |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Development of an Air Quality and Dust Control Management Plan for inclusion of the Construction Environmental Management Plan.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------|----------------------------------|
| Interest in climate change resiliency and a request for review with the Ministry when forms are complete | The Ministry has committed to sharing this information when available | Addressed | Share information when available |

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry’s 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Tseil-Waututh has not voiced any specific issues or concerns with respect to Atmospheric Noise. | | | |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

A negligible effect on access to instream locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Potential effects of construction during fishing season on fishing activities</p> | <p>Potential interference with fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4 (Marine Use Mitigation Measures)</p> |
| <p>Impacts of Tunnel decommissioning on Aboriginal fisheries, specifically as it relates to timing</p> | <p>Potential interference with fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4 (Marine Use Mitigation Measures)</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewscales.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

Negligible effect on access to upland locations for traditional use

Negligible effect on quality of experience tied to access of upland areas for traditional use.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|---|
| <p>Impacts of staging/laydown areas. Request that the Ministry provide construction parameters to avoid impacting areas around Project footprint.</p> | <p>The Application has been developed with the assumption that all temporary and permanent works will be included within the Project alignment. Potential staging areas that will be made available to the contractor encompass areas within the highway right-of-way that have been previously developed and disturbed.</p> <p>Any temporary or permanent works that are to take place will be subject to applicable permitting requirements, including <i>Water Sustainability Act</i> permitting and archaeological investigation if required. Applications for these permits will include detailed descriptions and locations of works to take place.</p> <p>If the contractor chooses to develop staging areas on sites other than those identified, site-specific environmental permitting and approvals will be obtained by the contractor.</p> | <p>Addressed</p> | <p>Contractor will obtain permits and approvals as required</p> |

5.5 VISUAL QUALITY

The new bridge will add noticeable visual features to the landscape and will change visual conditions adjacent to the Project alignment. Replacement of interchanges also has the potential to change visual conditions of these locations. At distances greater than one kilometer, the bridge deck will merge with the natural landscape and the main visual features will be the bridge towers. Changes in visual quality at interchanges will be minor as visual quality in such areas is currently influenced by existing transportation infrastructure.

Effects

During construction: No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

During operation: A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Minimize effects through Project design.

Use of vegetated buffers to minimize visual effects to residential developments within close proximity to the bridge in Delta.

Residual & Cumulative Effects

There is a moderate, long-term probability of disturbance to visual quality.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Tseil-Waututh Nation has not voiced any specific issues or concerns with respect to Visual Quality. | | | |

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

During construction: No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

During operation: A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a change find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

|---|--|-----------|--|
| Participation in archaeological fieldwork and review of archaeological draft reports | Tsleil-Waututh Nation participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports. | Addressed | Tsleil-Waututh Nation will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports. |
| Request that First Nations permits be obtained before the commencement of archaeological work | First Nations heritage permits were obtained by the archaeologist in advance of work commencing. | Addressed | Obtain permits as required |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improved connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

A negligible effect on access to instream locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

7.0 HUMAN HEALTH

A negligible effect on access to upland locations for traditional use has been determined.
 A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation
 Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.
 Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

Residual & Cumulative Effects
 No significant Project-related residual or cumulative effects on human health are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|--|
| Interest in considering methods in addition to barriers, for suicide prevention | The Ministry is in the process of developing a policy in which new bridges in the Lower Mainland will require the installation of safety barriers. The Ministry is committed to including safety barriers as part of the design of the new bridge and will continue to discuss additional measures with Tseil-Waututh. Assessment of potential Project-related effects on human health, including community and social factors, are presented in Section 7.1 of the Application. | Addressed in Application | Development of safety barrier policy for new bridges in the Lower Mainland. Implementation of mitigation measures outlined in Section 7.1 |
| Interest in social determinants of health being assessed in the EA Application and Human Health being a VC | Social determinants of health was considered in the assessment of potential Project-related effects on human health, including community and social factors. Human Health is addressed in Section 7.1 of the Application. | Addressed | None |

| 8.0 ACCIDENTS AND MALFUNCTIONS | | | |
|---|---|---------------|--|
| <p>Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.</p> <p>In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | An Emergency Response and Spill Contingency Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills | Addressed | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |

| OTHER ISSUES | | | |
|--|---|---------------|---|
| Consultation with Tsleil-Waututh Nation identified issues outside of the environmental assessment process, Aboriginal Interests, Aboriginal Consultation, Aboriginal Participation and Project-Related Opportunities, and sections of the Application. | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Consideration of smart technologies in Project design | The Ministry is developing an Intelligent Transportation System Strategy for the Highway 99 corridor as part of the Project scope. Proposed infrastructure includes a fibre optic network connecting the highway to the Regional Transportation Management Centre, cameras providing coverage of the highway, vehicle detection sensors, changeable message signs and additional infrastructure to allow for expansion of the system as new technologies come into use. | Addressed | Development of Intelligent Transportation System Strategy |
| Length of time tolls are in place | The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|------------------|-------------------------|
| <p>Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River.</p> | <p>Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> | <p>Addressed</p> | <p>None</p> |
| <p>Consideration of traffic data from other proposed projects or regional studies</p> | <p>As outlined in Section 5.1.9, traffic data from a number of sources was considered.</p> | <p>Addressed</p> | <p>None</p> |

| ENVIRONMENTAL ASSESSMENT PROCESS | | | |
|---|----------------------------------|---------------|--------------------------------|
| <p>An environmental assessment of the Project is required under the B.C. <i>Environmental Assessment Act</i> (B.C. <i>EAA</i>), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. <i>EAA</i> sets out the criteria for reviewable projects.</p> <p>On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. <i>EAA</i>, and that it requires an EAC.</p> <p>The Project as proposed is not subject to review under the <i>Canadian Environmental Assessment Act, 2012</i>, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.</p> <p>EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the <i>Environmental Assessment Act</i>.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Squamish did not voice any issues or concerns regarding the Environmental Assessment Process. | | | |

ABORIGINAL INTERESTS

There are potential Project related impacts to Squamish's title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape
- Instream locations (during construction)

Quality of experience while engaged in or tied to traditional use

- cultural landscape
- Instream locations (during construction)

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations (during construction)
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- Fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

Quality of experience while engaged in or tied to traditional use

- changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
- Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|--|
| <p>Protection of Squamish Nation’s right to fish within the Project area.</p> | <p>Squamish’s rights to fish within the Project area is addressed in Part C of the Application. With the implementation of mitigation measures in Section 4.4 (Fish and Fish Habitat), residual effects on the exercise of Aboriginal Interests by Squamish as a result of the Project are not expected.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures in Section 4.4.4 (Fish and Fish Habitat Mitigation Measures)</p> |
| <p>Access to the Fraser River and the potential to displace fishing vessels. Squamish gets their food fish from the Project area and is concerned with any impacts that would harm this.</p> | <p>Squamish’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A measurable direct effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation measures outlined in Section 5.2.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Social effects of the Project such as Squamish Nation’s knowledge transmission, language loss, dependency and social interaction.</p> | <p>Social effects of the Project on Squamish’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3.8 and Section 10.3 of Part C of the Application.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application</p> |

| ABORIGINAL CONSULTATION | | | |
|---|--|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.</p> <p>Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process | Squamish received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Funding for Project Report | The Ministry signed a funding agreement with Squamish Nation which provided funding for a GMT Project Report. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT-RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project’s Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

- Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests
- Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes

Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns.

Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes.

Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects

Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.

Incorporate community and traditional knowledge in Project components

Document and report to EAO on the Ministry’s Aboriginal consultation program at times specified by EAO.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------|--|
| Opportunities for cultural recognition and naming, specifically interpretive signage by highway including road signs and kiosks | The Ministry is exploring opportunities for cultural recognition and naming and will to work with Squamish on this matter. | Ongoing | Discussion with Squamish to explore opportunities related to cultural recognition and naming, art and interpretive signage |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------|--|
| Project-related employment, training, contracting, and economic development opportunities. | The Ministry is committed to working with Squamish to identify potential opportunities to benefit from the. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Squamish to identify ways to support community preparedness. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful. |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|--------------------------|--|
| Change in flow rates after Tunnel removal | Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.1.4 (River Hydraulics Mitigation Measures) |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Potential effects of run off and drainage - innovative stormwater solutions and bioengineering techniques</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.2.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|--|
| <p>Water quality and sediment issues: comprehensive understanding of potential ecological impacts and core sampling</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.2.4</p> |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

- A negligible effect on the availability of fish resources for traditional use has been determined.
- A negligible effect on quality of fish resources for traditional use has been determined.
- A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

- Avoid effects through Project design.
- Apply best management and environmental management practices.
- Develop Construction Environmental Management and Operational Environmental Management plans.
- Use timing windows for undertaking in-stream works.
- Erosion and sediment control.
- Habitat enhancement and offsetting.

Residual & Cumulative Effects

- There is a low, short-term probability of physical injury or mortality to fish through crushing or entrainment during the construction period.
- No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|--|
| <p>Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon. New studies have proven that hard surface runoff from roads will kill salmon within two hours of exposure.</p> | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to the Squamish. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.4.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|--|
| <p>Evaluation on impacts to ecological services for all ecosystems within the vicinity of the Project</p> | <p>Pacific salmon species selected for Project-related baseline studies include Chinook salmon, Chum salmon, Coho salmon, Pink salmon, and Sockeye salmon. Using existing scientific and literature, baseline conditions will be described for all life history stages of each salmon species, with emphasis on those life history stages that use aquatic habitats within the Project Area. Fish sampling focused on potential rearing values within drainage ditches in Richmond and Delta, for which limited existing inventory information exists, has been incorporated into the baseline studies.</p> | <p>Addressed</p> | <p>None</p> |
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon.</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.3.4 and 4.4.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|--|
| <p>Disturbance to benthic and aquatic invertebrates and their habitat</p> | <p>Aquatic habitats, which include habitat for fish and other aquatic species (including benthic and aquatic invertebrates), will be a primary area of focus for the environmental assessment of the Project.</p> <p>Potential disturbance to benthic and aquatic invertebrates is not, on its own, proposed as a key area of study given the nature of the project and the aquatic habitats it overlaps with. Aquatic habitats overlapping with the Project occur within a section of the Fraser River that is dynamic, influenced by large flow variations and downstream transport of sand and organic matter. Therefore, aquatic and benthic invertebrate communities in the Project Area are expected to be resilient to physical disturbance. Given the temporary and short-term changes in flow and water quality expected from Project activities, it is anticipated that the benthic and aquatic invertebrates will recover rapidly from disturbance.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.4.4</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.
 Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan
 Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Squamish did not voice any issues or concerns regarding Marine Mammals | | | |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail march that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management.

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|---|
| Invasive plant species and proposed plans to manage presence during construction | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|--------------------------|---|
| Use of culturally significant plants in planting plans and importance of obtaining input from Squamish on plant selection | Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans. | Addressed in Application | The Ministry will develop planting plans with consultation from Aboriginal Groups |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

- A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.
- A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.
- A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

- Minimize potential effects through Project design.
- Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.
- Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|--|
| <p>Potential light and noise effects on wildlife and fish.</p> | <p>The Ministry understands that Squamish is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Potential effects of the bridge structure on species such as waterfowl and migratory birds. | The Ministry understands that Squamish is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.8.4 |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Development of an Air Quality and Dust Control Management Plan for inclusion of the Construction Environmental Management Plan.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Squamish did not voice any issues or concerns regarding the Air Quality. | | | |

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry’s 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Noise monitoring program.

Site specific schedules and activities.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on atmospheric noise are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Squamish did not voice any issues or concerns regarding the Atmospheric Noise. | | | |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

During construction, a measureable effect on access to instream locations for traditional use has been determined.

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Potential effects of construction during fishing season on fishing activities. Impacts of Tunnel decommissioning on Aboriginal fisheries, specifically as it relates to timing.</p> | <p>Potential interference with Squamish fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |
| <p>Fishing patterns and practices have adapted to the Tunnel in the riverbed. Removal of the Tunnel would impact these established patterns and practices</p> | <p>As discussed in Section 4.4 (Fish and Fish Habitat) of the Application, potential effects on habitat quality associated with decommissioning of the existing Tunnel are considered negligible. Sensitive life stages of salmonids migrating through or foraging in this section of the river tend to occupy the upper water column, and eulachon spawning habitat is absent near the Tunnel crossing, while sturgeon overwintering habitat will continue to be present after the trench has naturally infilled. As a result, potential Project-related effects associated with fish habitat alteration are not considered further in the assessment.</p> | <p>Addressed</p> | <p>None</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Address temporary effects on existing land use during construction and incorporate land use considerations into a Traffic Management Plan.

Incorporate land use considerations into a Marine Access Management Plan.

Reconnect recreational trails.

Residual & Cumulative Effects

There is a high, short-term probability of disturbance to residential, commercial and industrial land uses.

There is a high, short-term probability of disturbance to recreational uses near the new bridge.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Squamish did not voice any issues or concerns regarding Land Use | | | |

5.5 VISUAL QUALITY

The new bridge will add noticeable visual features to the landscape and will change visual conditions adjacent to the Project alignment. Replacement of interchanges also has the potential to change visual conditions of these locations. At distances greater than one kilometer, the bridge deck will merge with the natural landscape and the main visual features will be the bridge towers. Changes in visual quality at interchanges will be minor as visual quality in such areas is currently influenced by existing transportation infrastructure.

Effects

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Minimize effects through Project design.

Use of vegetated buffers to minimize visual effects to residential developments within close proximity to the bridge in Delta.

Residual & Cumulative Effects

There is a moderate, long-term probability of disturbance to visual quality.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Squamish has not voiced specific concerns regarding Visual Quality. | | | |

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a change find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|---|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites. Protection of cultural and archaeological sites that are known to exist or may be discovered within the Project area.</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Squamish. All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment. Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------|---|
| Participation in archaeological fieldwork and review of archaeological draft reports | Squamish participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports. | Addressed | Squamish will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports. |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

During construction, a measureable effect on access to instream locations for traditional use has been determined.

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been

7.0 HUMAN HEALTH

determined.
 During operation, a negligible effect on access to instream locations for traditional use has been determined.
 During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.
 A negligible effect on access to upland locations for traditional use has been determined.
 A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.
Mitigation
 Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.
 Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.
Residual & Cumulative Effects
 No significant Project-related residual or cumulative effects on human health are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|-----------|-------------------------|
| While many contaminants are expected to remain stable or drop, two specifically are a concern (DFO Canadian Scientific Advisory Report 2015-002, FVRD Highlights of Emission Trends 1990-2013): <ul style="list-style-type: none"> • Diesel particulate matter levels in the FRVD post a health risk for developing cancer at more than 20x the Health Canada acceptable threshold • Acrolein levels in the FVRD poses a risk for non-cancer outcomes more than 15x times the Health Canada threshold | Section 7.0 of the Application includes an assessment of potential Project-related effects on human health. The Human Health Risk Assessment (HHRA) conducted in support of the environmental assessment will include a consideration of air contaminants near Highway 99. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|-------------------------|
| <p>Scope of pollution testing was one km from work zone. However, increases in traffic from this route will have a long ranging, long term impact through the East to the Fraser Valley. The projection graphs do not predict what the maximum capacity of the route once completed. Is such a projection available to ascertain outcomes?</p> | <p>The future conditions for the Air Quality Assessment used the reference year 2031 to make effective use of the vehicle fleet emissions forecasts set out by Metro Vancouver, and the Regional Transportation Model. Metro Vancouver’s emission inventory was used. Metro Vancouver conducts an emission inventory, and forecasts emissions, and the latest emission forecasting by Metro Vancouver includes emission forecasts to 2031. Forecasting emissions, and resulting air quality, further into the future will have more uncertainty as projections of what future regulations may be implemented and available vehicle technologies for new vehicles built are unknown. Therefore, 2031 represents a conservative projection of what air quality is expected to be like in the future with and without the Project.</p> | <p>Addressed</p> | <p>None</p> |

| 8.0 ACCIDENTS AND MALFUNCTIONS | | | |
|--|---|---------------|--|
| <p>Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.</p> <p>In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | An Emergency Response and Spill Contingency Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills | Addressed | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |

| OTHER ISSUES | | | |
|--|---|---------------|--------------------------------|
| Consultation with Squamish Nation identified issues outside of the environmental assessment process, Aboriginal Interests, Aboriginal Consultation, Aboriginal Participation and Project-Related Opportunities, and sections of the Application. | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Increased shipping | The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. | Addressed | None |

Note: Concerns listed in this table include those outlined in the GMT Project Impact Study prepared and submitted by Tsawwassen First Nation.

| ENVIRONMENTAL ASSESSMENT PROCESS | | | |
|---|---|-----------------|--------------------------------|
| <p>An environmental assessment of the Project is required under the B.C. <i>Environmental Assessment Act</i> (B.C. <i>EAA</i>), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. <i>EAA</i> sets out the criteria for reviewable projects.</p> <p>On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. <i>EAA</i>, and that it requires an EAC.</p> <p>The Project as proposed is not subject to review under the <i>Canadian Environmental Assessment Act, 2012</i>, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.</p> <p>EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the <i>Environmental Assessment Act</i>.</p> | | | |

| <p>Potential interference with Aboriginal fisheries during decommissioning of the Tunnel and the importance of working closely with communities to ensure negative effects are avoided</p> | <p>Potential interference with Tsawwassen fisheries during bridge construction and decommissioning of the Tunnel is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. The Ministry understands the importance of working closely with Tsawwassen to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Implementation measures outlined in Section 5.2.4</p> |
| <p>Significant contracting set aside for Aboriginal businesses to compete</p> | <p>The Ministry is committed to working with Tsawwassen to identify potential opportunities to benefit from the Project and is confident that the Project's procurement process will effectively allow this commitment to be met.</p> | <p>Addressed</p> | <p>Ongoing consultation</p> |
| <p>Stronger presence of Tsawwassen and Musqueam in the Project area should be reflected in the way the two Nations participate in the work</p> | <p>Noted.</p> | <p>Noted</p> | <p>Ongoing consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|-----------------------------|
| <p>Importance of professional development and career planning in relation to career opportunities</p> | <p>The Ministry will continue discussions with Aboriginal Groups' regarding employment, training and contracting opportunities in relation to the Project.</p> | <p>Addressed</p> | <p>Ongoing consultation</p> |
| <p>Cumulative effects: Consideration of cumulative effects on Aboriginal rights. Assessment of cumulative effects in regards to the inclusion of other reasonably foreseeable projects and activities. Absence of a comprehensive study of cumulative effects on the Fraser River</p> | <p>The Application will include historical context as outlined relating to changes in use over time by Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by First Nations or was otherwise available from publicly available sources. However, there is no EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests. The Ministry's cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is</p> | <p>Addressed</p> | <p>None</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

| | <p>outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed.</p> <p>While the Ministry acknowledges that Tsawwassen is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project.</p> | | |

| ABORIGINAL CONSULTATION | | | |
|---|--|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.</p> <p>Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process. | Tsawwassen received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Importance of ensuring appropriate use of information shared by Aboriginal Groups' as it relates to confidentiality and dissemination. | The Ministry understands and respects that certain information shared by Tsawwassen may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. Subject to the requirements of applicable laws, the Ministry will respect Tsawwassen requests to keep information confidential. | Addressed | Appropriate use of confidential information |
| Funding for Project Related Study | Tsawwassen received funding for a Project related Study. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT-RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project's Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

- Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests
- Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes
- Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns
- Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes
- Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects
- Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.
- Incorporate community and traditional knowledge in Project components

Document and report to EAO on the Ministry's Aboriginal consultation program at times specified by EAO

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------|--|
| Opportunities for cultural recognition and naming | The Ministry is exploring opportunities for cultural recognition and naming and will work with Tsawwassen on this matter. | Ongoing | Discussion with Tsawwassen to explore opportunities related to cultural recognition and naming, art and interpretive signage |
| Project-related employment, training, contracting, and economic development opportunities Adequate training time to take full advantage of potential future Project work activities | The Ministry is committed to working with Tsawwassen to identify potential opportunities to benefit from the Project. The Ministry acknowledges that Tsawwassen want to prepare their membership for employment opportunities and will work with Tsawwassen to identify ways to support community preparedness. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful. |
| Interest in revenue sharing opportunities from tolling | Revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application. | | None |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Development of a mitigation plan to ensure protection to the Lulu-island-Delta water main.

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Change in flow rates after Tunnel removal</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm.</p> <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. River Hydraulics and River Morphology are addressed in Section 4.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4 (River Hydraulics Mitigation Measures)</p> |
| <p>Potential effect of removing the Tunnel on marshes along the river</p> | <p>Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary march, that occur in the vicinity of the Project.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4 (River Hydraulics Mitigation Measures)</p> |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Project activities undertaken in the upland ditch systems will follow Standards and Best Practices for Instream Works.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|--|
| <p>Potential effects of run off and drainage</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity in anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.2.4 (sediment and water quality mitigation measures</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term potential of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Potential effects to Tsawwassen Right to Harvest | <p>Tsawwassen's rights to harvest within the Project area are addressed in Part C of the Application.</p> <p>With the implementation of mitigation measures in Section 4.4 (Fish and Fish Habitat), residual effects on the exercise of Aboriginal Interests by Tsawwassen as a result of the Project are not expected.</p> | Addressed in Application | Implementation of mitigation measures in Section 4.4 (Fish and Fish Habitat) |
| Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon. Effects of the Project on sturgeon, eulachon, and salmon spawning grounds | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to Tsawwassen. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application.</p> | Addressed | Implementation of mitigation measures outlined in 4.4.4 (Fish and Fish Habitat Mitigation Measures) |
| Effects of lighting on fish | <p>Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application.</p> | Addressed | Implementation of mitigation measures outlined in 4.4.4 (Fish and Fish Habitat Mitigation Measures) |

|--|--|---------------------------------|---|
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | | <p>Implementation of mitigation measures outlined in 4.3.4 (Underwater Noise Mitigation Measures) and 4.4.4 (Fish and Fish Habitat Mitigation Measures)</p> |
| <p>Accommodation of construction windows for fish cycle spikes (i.e. 4 year sockeye and 2 year pink)</p> | <p>To the extent that is technically feasible and viable, sediment removal will be undertaken between July 16th and February 28th, the least-risk timing window for the protection of juvenile salmon and eulachon.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.4.4 (Fish and Fish Habitat Mitigation Measures)</p> |
| <p>Requirement for HAAD (Harmful Alteration, Disruption and Destruction) permit</p> | <p>All required permits will be obtained.</p> | <p>Addressed</p> | <p>Obtain required permits</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.
 Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan
 Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|---|
| Potential effects to Tsawwassen Right to Harvest | Tsawwassen’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures in Section 4.6 (Marine Mammals), residual effects on the exercise of Aboriginal Interests by Tsawwassen as a result of the Project are not expected. | Addressed in Application | Implementation of mitigation measures in Section 4.6 (Marine Mammals) |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.
 A negligible effect on quality of vegetation resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.
 Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.
 Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail marsh that overlaps with Project components. Replant disturbed areas with native species.
 Invasive species management plan will included in the Construction Environmental Management Plan

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|---|
| Potential effects to Tsawwassen Right to Harvest | Tsawwassen’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures in Section 4.7 (Vegetation), residual effects on the exercise of Aboriginal Interests by Tsawwassen as a result of the Project are not expected. | Addressed in Application | Implementation of mitigation measures in Section 4.7 (Vegetation) |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|--|
| Invasive plant species and proposed plans to manage presence during construction | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed | Implementation of mitigation measures outlined in Section 4.7.4 (Vegetation Mitigation Measures) |
| Use of culturally significant plants in planting plans | Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans. | Addressed | The Ministry will develop planting plans with consultation from Aboriginal Groups |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.
 A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.
 Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.
 Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.
 There is a low, long-term probability of barn owl mortality.
 No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|---|
| Potential effects to Tsawwassen Right to Harvest | Tsawwassen’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures in Section 4.8 (Terrestrial Wildlife), residual effects on the exercise of Aboriginal Interests by Tsawwassen as a result of the Project are not expected. | Addressed in Application | Implementation of mitigation measures in Section 4.8 (Terrestrial Wildlife) |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------|-------------------------|
| <p>Potential light and noise effects on wildlife</p> | <p>The Ministry understands that Tsawwassen is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application.</p> | | |
| <p>Potential effects of the bridge structure on species such as waterfowl and migratory birds and bats</p> | <p>The Ministry understands that Tsawwassen is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application.</p> | | |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Development of an Air Quality and Dust Control Management Plan for inclusion of the Construction Environmental Management Plan.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|-------------------------|
| <p>Effects of change in air quality resulting from increase in traffic volume due to the Project</p> | <p>Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | <p>Addressed</p> | <p>None</p> |

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience while engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry's 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Noise monitoring program.

Site specific schedules and activities.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|-------------------------------------|---|-----------|--|
| Potential noise effects on wildlife | The Ministry understands that Tsawwassen is concerned with the potential effects of noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application. | Addressed | Implementation of mitigation measures outlined in Section 4.8.4 (Terrestrial Wildlife Mitigation Measures) |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

A negligible effect on access to instream locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Development and implementation of a specific Tsawwassen First Nation marine use protocol through direct consultation with Tsawwassen First Nation.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected

| Inappropriateness/inadequacy of Marine Users Group for consultation with Tsawwassen | <p>The Ministry is continuing to work with Tsawwassen to better understand how they would like to participate in the development and implementation of mitigation measures in particular, in relation to alternatives to a marine users group.</p> | In progress | Ongoing consultation |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Address temporary effects on existing land use during construction and incorporate land use considerations into a Traffic Management Plan.

Incorporate land use considerations into a Marine Access Management Plan.

Reconnect recreational trails.

Residual & Cumulative Effects

There is a high, short-term probability of disturbance to residential, commercial and industrial land uses.

There is a high, short-term probability of disturbance to recreational uses near the new bridge.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Tsawwassen has not voiced any concerns or issues with Land Use | | | |

5.5 VISUAL QUALITY

The new bridge will add noticeable visual features to the landscape and will change visual conditions adjacent to the Project alignment. Replacement of interchanges also has the potential to change visual conditions of these locations. At distances greater than one kilometer, the bridge deck will merge with the natural landscape and the main visual features will be the bridge towers. Changes in visual quality at interchanges will be minor as visual quality in such areas is currently influenced by existing transportation infrastructure.

Effects

During construction, no to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

During operation, a measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Minimize effects through Project design.

Use of vegetated buffers to minimize visual effects to residential developments within close proximity to the bridge in Delta.

Residual & Cumulative Effects

There is a moderate, long-term probability of disturbance to visual quality

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--------|---------------------------|--------|-------------------------|
|--------|---------------------------|--------|-------------------------|

| | | | |
|---|--|--|--|
| Tsawwassen has not voiced any concerns or issues with Visual Quality. | | | |
|---|--|--|--|

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

During construction, no to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

During operation, a measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a chance find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------|--|
| Protection of archaeological and heritage resources, including intangible heritage sites | Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Tsawwassen. All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment. Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1. | Addressed | Implementation of mitigation measures as outlined in Section 6.1.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------|---|
| Participation in archaeological fieldwork and review of archaeological draft reports | Tsawwassen participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports. | Addressed | Tsawwassen will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports. |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

During construction, a measureable effect on access to instream locations for traditional use has been determined.

7.0 HUMAN HEALTH

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During operation, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.

Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on human health are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|--|
| Contamination from harvested species will be passed along to members | Assessments of potential Project-related effects on human health are presented in Section 7.1 of the Application. The Ministry is taking every precaution to ensure that vegetation, fish and fish habitat, and terrestrial wildlife are not contaminated. | Addressed in Application | Implementation of mitigation measures outlined in Sections 4.4.4 (Fish and Fish Habitat Mitigation Measures), 4.7.4 (Vegetation Mitigation Measures), 4.8.4 (Terrestrial Wildlife Mitigation Measures), and 7.1 (Human Health) |

| 8.0 ACCIDENTS AND MALFUNCTIONS | | | |
|---|---|--------------------------|--|
| Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur. In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | An Emergency Response and Spill Contingency Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills | Addressed in Application | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |
| Potential for contamination from fuel and battery acid leaks in soils adjacent to the highway | Any potentially hazardous material identified will be managed in accordance with applicable legislation, including the B.C. Hazardous Waste Regulation, B.C. Reg. 63/88, and the Workers' Compensation Board of B.C. Occupational Health and Safety Regulation, B.C. Reg. 296/97. Spill prevention and management during construction are described in Section 12 of the Application. | Addressed in Application | Adherence to the Construction Environmental Management Plan and applicable legislation |

| OTHER ISSUES | | | |
|---|---|---------------|--------------------------------|
| Consultation with Tsawwassen identified issues outside of the environmental assessment process, Aboriginal Interests, Aboriginal Consultation, Aboriginal Participation and Project-Related Opportunities, and sections of the Application. | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Maintaining access to points connecting to Tsawwassen, specifically access to Highway 17A | As indicated in the Section 16.1 (Draft Reference Concept), the Project will not impact Tsawwassen access. | Addressed | None |
| Length of time tolls are in place | The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application. | Addressed | None |
| Potential increase in vessel traffic on the Fraser River as a result of the decommissioning of the Tunnel | The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|------------------|-------------------------|
| <p>Use and disposal of dredged and other material in the river as well as general concerns related to dredging of the Fraser River</p> | <p>Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> | <p>Addressed</p> | <p>None</p> |

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. *Environmental Assessment Act* (B.C. *EAA*), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. *EAA* sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. *EAA*, and that it requires an EAC.

The Project as proposed is not subject to review under the *Canadian Environmental Assessment Act, 2012*, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the *Environmental Assessment Act*.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------------|--------------------------------------|
| In addition to the funding provided by the Proponent, Lyackson First Nation requires funding for participation in EAO's own process. | The Ministry provided funding to Lyackson First Nation for the Pre-Application Phase. Funding for the Application Review Phase will be provided. Funding provided by the proponent is inclusive of EAO-led activities. | Referred to EAO | Funding for Application Review Phase |
| Project's EA Process and its associated timelines. | Concerns relating to the EA process and its associated timelines were referred to EAO. EAO issued a memo to members of the Working Group on March 18, 2016 in response to questions and concerns related to the EA process and its associated timelines. The Ministry understands that EAO responded to Lyackson's queries regarding the EA Process and associated timelines. | Referred to EAO | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|--------------------------------------|
| Effectiveness and nature of the EA process as well as current volume of EAs underway. | Concerns relating to the broad concern related to the effectiveness and nature of the Environmental Assessment Process have been referred to EAO. While the Ministry is unable to address the concern related to the current volume of EA's underway, the Ministry has and will continue to work with Lyackson to support their participation in this particular Project's review process and to plan for consultation activities in a manner that is mindful of the current volume of referrals that Lyackson is working on. Support to date has included Pre-Application capacity funding. | Referred to EAO | None |
| Lack of resources and funding for First Nations communities. "It is like 100 referrals in one spread out over a number of years." | The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. | Addressed | Funding for Application Review Phase |
| Strength of Claim assessment and related depth of consultation. Proper context of Village site is not considered nor is the Village site as a trade centre accurately characterized. | Concerns related to the strength of claim assessment have been referred to EAO and MARR. | Referred to EAO and MARR | None |
| Lack of EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessment of VCs that are directly linked to the exercise of those Aboriginal Interests | Concerns relating to the lack of EAO requirement to assess incremental cumulative effects have been referred to EAO. | Referred to EAO | None |

| ABORIGINAL INTERESTS | | | |
|---|--|---------------------------------|---|
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| <p>Lyackson First Nation’s access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel and the importance of working closely with communities to ensure negative effects are avoided. “It is clear that Lyackson First Nation values, particularly those related to subsistence fishing, are likely to be directly impacted by Project construction and operation.”</p> | <p>Lyackson’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A measurable direct effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation measures outlined in Section 5.2.4</p> |
| <p>Lyackson First Nation’s use of lands, waters, and resources in the area of the mouth and south arm of the Fraser River within 5 km of the Project, including the ancestral village site of the ʔəq̓t̓inəs/TI’uq̓tinus and camps, cabins, and other residences in the area of Steveston and Canoe Pass, are fundamental to past, present, and future Lyackson First Nation use and occupancy, and to the ongoing practice of Lyackson First Nation culture, identity, and rights.</p> | <p>Noted.</p> | <p>Noted.</p> | <p>Ongoing consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Protection of Lyackson First Nation’s rights to harvest within the Project area. | <p>Lyackson’s rights to harvest within the Project area are addressed in Part C of the Application.</p> <p>With the implementation of mitigation measures outlined in Table 10.3-1 and Section 10.1.3.5, residual effects on the exercise of Aboriginal Interests by Lyackson as a result of the Project are not expected.</p> | Addressed in Application | Implementation of measures outlined in Section 10.1.3.5 |
| Consideration of cumulative effects on aboriginal rights | <p>The Ministry’s cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed.</p> | Addressed in Application | None |
| Inappropriate toll burden to access Lyackson village site, especially considering the current BC Ferries toll burden. | Noted. | Noted | Ongoing consultation |

ABORIGINAL CONSULTATION

Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.

Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.

In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.

Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|---|
| Capacity funding to facilitate participation in the Project review process | Lyackson received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Funding for Traditional Use Study | The Ministry signed funding agreements with the members of the Lyackson which provided funding for a Traditional Use Study. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT-RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project’s Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

- Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests
- Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes
- Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns
- Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes
- Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects
- Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.
- Incorporate community and traditional knowledge in Project components

Document and report to EAO on the Ministry’s Aboriginal consultation program at times specified by EAO.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------|-------------------------|
| Revenue sharing opportunities from tolling | Revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|----------------|---|
| <p>Opportunities for cultural recognition and naming. Suggestion that a Canoe be commissioned which would have paddles for each Nation showing the relationship between the Ministry and the Nations.</p> | <p>The Ministry is exploring opportunities for cultural recognition and naming and will work with Lyackson and other Aboriginal groups on this matter. Lyackson’s suggestion is noted.</p> | <p>Ongoing</p> | <p>Discussion with Aboriginal groups to explore opportunities related to cultural recognition and naming, art and interpretive signage</p> |
| <p>Project-related employment, training, contracting, and economic development opportunities. Equity and revenue sharing for Aboriginal Groups and importance of initiating related discussions with Aboriginal Groups during the Pre-Application Stage.</p> | <p>The Ministry is committed to working with Lyackson to identify potential opportunities to benefit from the Project. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Lyackson to identify ways to support community preparedness.</p> | <p>Ongoing</p> | <p>The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful.</p> |
| <p>Adequate training time to take full advantage of potential future Project work activities. Opportunities for training related to traditional activities.</p> | <p>The Ministry is committed to working with Lyackson First Nation to identify potential opportunities to benefit from the Project. The Ministry has initiated discussions with Lyackson First Nation regarding Project-related benefits and opportunities.</p> | <p>Ongoing</p> | <p>The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful.</p> |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|------------------|--|
| <p>Change in flow rates after Tunnel removal</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm.</p> <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. River Hydraulics and River Morphology are addressed in Section 4.1.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4</p> |
| <p>Potential effect of removing the Tunnel on marshes along the river. “Marshes should be allowed to naturally occur as they are critical habitat for fish for protection for predators, rest and clear water to breathe.”</p> | <p>Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. Creating comparable habitat within the Project alignment will offset unavoidable potential Project-related effect, which is limited to a small reduction in area of the cattail marsh that overlaps with Project components. Vegetation is addressed in Section 4.7 of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.7.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|------------------|---|
| <p>Post decommissioning monitoring of potential effects of Tunnel removal and importance of sharing this information with Aboriginal Groups in writing and through meetings.</p> | <p>Environmental monitoring will be conducted during construction of the Project and will have the key objective of ensuring construction activities are undertaken in accordance with the mitigation described within the Application and EAC, CEMP, and associated permits, licenses, and approvals. The CEMP will describe the frequency and scope of environmental monitoring and reporting that will be implemented throughout construction of the Project. Implementation of the environmental monitoring program will be overseen by a qualified environmental professional and will be carried out during all construction activities that have the potential to result in adverse environmental effects. The environmental monitor will assess the implementation of the CEMP and any permits or approvals assigned to the Project, as well the effectiveness of the mitigation applied. The environmental monitor will be authorized to suspend any activity resulting in or potentially resulting in a breach of the CEMP or associated environmental permits, licenses and approvals.</p> <p>The Ministry will share this information with Lyackson.</p> | <p>Addressed</p> | <p>Environmental monitoring and ongoing information sharing</p> |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|---|
| Potential effects of run off and drainage | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected.</p> <p>Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | Addressed | Implementation of mitigation measures outlined in Section 4.2.4 |
| Impacts of the River from potential pollutants and contaminants on the Tunnel walls if left in place | The tunnel decommissioning is anticipated to involve the removal of the four in-river sections of the Tunnel. | Addressed | None |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|---|
| Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon | The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to the Lyackson. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application. | Addressed | Implementation of mitigation measures outlined in 4.4.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|------------------|--|
| <p>Concern with increased water temperatures in the Fraser River and the importance of opportunities to provide additional shade along the river</p> | <p>The Project will not have any measureable effects on water temperatures within the Fraser River South Arm and there are limited opportunities to provide shade that could moderate water temperature within this wide mainstem channel. More specifically, the Project will extensively avoid any riparian clearing on the river and any shading provided by the new bridge will be negligible. Determined by factors functioning at a watershed-level (e.g., climate and weather), water temperatures within the lower reaches of the river are primarily determined by upstream factors and not notably influenced by riparian shading. Riparian vegetation does, however, also provide a wide range of other fish habitat functions on large river channels like the Fraser River. These fish habitat functions include, but are not limited to shoreline habitat complexity, biofiltration functions, insect drop for food, and detrital inputs which support the broader food web. Although there are limited opportunities to directly affect water temperatures within the mainstem river, the Project’s proposed restoration of Green Slough is anticipated to provide enhanced habitat for fish, including riparian vegetation that will provided shaded habitat for fish.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.4.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Fish mortality from pile driving and blasting | The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. Mitigation, including timing windows for undertaking in-stream work and other measures outline in Project-related Environmental Management Plans, will ensure that potential effects on fish and fish habitat are effectively addressed. Fish mortality should not be a significant issue during pile driving. | Addressed in Application | Implementation of mitigation measures outlined in 4.4.4 |
| Effects of pile driving on salmon migration | Pile driving should not have an impact on salmon migration. | Addressed in Application | Implementation of mitigation measures outlined in 4.3.4 and 4.4.4 |
| Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon | Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in 4.3.4 and 4.4.4 |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River.

Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as impact pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.

Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Impact on marine mammals such as the Stellar Sea Lion</p> | <p>Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 kms. Standard industry and best management practices will be applied to activities such as impact pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to. Marine Mammals are addressed in Section 4.6 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.6.4</p> |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail march that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management.

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|---|
| Invasive plant species and proposed plans to manage presence during construction | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|--|
| <p>Inclusion of culturally significant plants in planting plans and opportunity for Lyackson in the identification of plants, and planting work. Lyackson has the capacity to undertake this type of work.</p> | <p>Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans.</p> | <p>Addressed</p> | <p>Develop planting plans with consultation from Aboriginal Groups</p> |
| <p>Ministry’s hydro-seeding spray contains invasive grasses that will damage new plants and add to the problem of invasive plants.</p> | <p>The Ministry will review its hydroseed mixes.</p> | <p>Addressed</p> | <p>Review hydro-seed mixes</p> |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Potential light and noise effects on wildlife and fish. | The Ministry understands that Lyackson is concerned with the potential effects of light and noise on species such as waterfowl, owls, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.8.4 |
| Potential effects of the bridge structure on species such as waterfowl and migratory birds. | The Ministry understands that Lyackson is concerned with the potential effects of the new bridge structure on species such as waterfowl and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.8.4 |
| Destruction of wildlife habitat, especially for bald eagles and blue herons, due to disturbance of green space on Deas Island and other riparian areas in the Project footprint during construction and operation of the Project. | Environmental protection measures that will be implemented during Project construction and operation to prevent of minimize potential effects on vegetation, and thereby potential effects on wildlife habitat, will be outlines in a Construction Environmental Management Plan as described in Section 12.0. The Plan will include a Terrestrial Vegetation and Wildlife Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|-------------------------|
| <p>Decreased quantity of birds, especially migratory waterfowl and eagles, in the Project area due to BC Hydro power lines and other above-ground structures.</p> | <p>As discussed in Section 4.7 (Terrestrial Wildlife), a collision risk study was conducted to understand seasonal use and behaviours by birds, and to estimate collision risk at the new bridge crossing location. The findings of the study indicate that collision effects to birds are considered unlikely and that most birds avoid collisions by flying above or below structures</p> | <p>Addressed in Application</p> | <p>None</p> |
| <p>Potential for impacts to wildlife , including nesting birds, due to increased air contamination from idling vehicles and the running of BC Hydro power lines above ground (as opposed to their current location within the George Massey Tunnel).</p> | <p>As discussed in Section 4.9 (Air Quality), ambient air quality in the vicinity of the Highway 99 corridor is expected to improve in the future, with or without the Project.</p> | <p>Addressed in Application</p> | <p>None</p> |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|-------------------------|
| <p>Congestion and air quality issues – support for improved transit and anything that reduces idling.</p> | <p>Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | <p>Addressed</p> | <p>None</p> |

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience while engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry’s 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|--|
| Potential impacts of noise from pile driving and blasting | The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Mitigation in accordance with the Ministry’s 2014 <i>Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways</i> will be implemented, as warranted, at select locations to avoid or minimize potential Project-related increase in post-construction noise levels. Atmospheric Noise is addressed in Section 4.10 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in 4.10.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Increase in traffic, and consequent increase in associated noise and vibration due to the increases capacity of the new bridge</p> | <p>The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new Bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment, after mitigation, are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the Highway but do not exceed what is acceptable for residential, educational or institutional facilities. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

A negligible effect on access to instream locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Potential effects of construction during fishing season on fishing activities. Effects of construction and decommissioning-related barging activities on Lyackson fishing.</p> | <p>Potential interference with Lyackson fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Address temporary effects on existing land use during construction and incorporate land use considerations into a Traffic Management Plan.

Incorporate land use considerations into a Marine Access Management Plan.

Reconnect recreational trails.

Residual & Cumulative Effects

There is a high, short-term probability of disturbance to residential, commercial and industrial land uses.

There is a high, short-term probability of disturbance to recreational uses near the new bridge.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Lyackson has not voiced any specific issues or concerns with respect to Land Use. | | | |

5.5 VISUAL QUALITY

The new bridge will add noticeable visual features to the landscape and will change visual conditions adjacent to the Project alignment. Replacement of interchanges also has the potential to change visual conditions of these locations. At distances greater than one kilometer, the bridge deck will merge with the natural landscape and the main visual features will be the bridge towers. Changes in visual quality at interchanges will be minor as visual quality in such areas is currently influenced by existing transportation infrastructure.

Effects

During construction, no to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

During operation, a measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Minimize effects through Project design.

Use of vegetated buffers to minimize visual effects to residential developments within close proximity to the bridge in Delta.

Residual & Cumulative Effects

There is a moderate, long-term probability of disturbance to visual quality.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|-------------------------|
| Running of BC Hydro power lines above ground (as opposed to their current location within the George Massey Tunnel). | If the BC Hydro's transmission line is built above ground, it is expected that it will visually blend with the bridge structure. | Addressed | None |

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

During construction, no to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

During operation, a measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a change find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|--|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites.</p> <p>Protection of cultural and archaeological sites that are known to exist or may be discovered within the Project area. No more tolerance for further disturbance of archaeological sites in the overdeveloped Lower Mainland. This includes disturbed and intact sites.</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Lyackson.</p> <p>All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment.</p> <p>Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |
| <p>Participation in archaeological fieldwork and review of archaeological draft reports.</p> <p>Importance of having a cultural person, known to LCFN and LFN, participate in archaeological work.</p> | <p>Lyackson participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports.</p> | <p>Addressed in Application</p> | <p>Lyackson will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports.</p> |
| <p>Assessment of cultural significance of the site, if a run off pool is being created for the Project on Deas Island</p> | <p>The cultural significance of Deas Island is noted. The use of biofiltration ponds will provide a benefit by improving the level of treatment of surface runoff from highway 99.</p> | <p>Noted</p> | <p>Ongoing consultation</p> |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

A negligible effect on access to instream locations for traditional use has been determined.

7.0 HUMAN HEALTH

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.
 A negligible effect on access to upland locations for traditional use has been determined.
 A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation
 Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.
 Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

Residual & Cumulative Effects
 No significant Project-related residual or cumulative effects on human health are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|--|
| New bridge will result in increased suicide attempts | The Ministry is in the process of developing a policy in which new bridges in the Lower Mainland will require the installation of safety barriers. The Ministry is committed to including safety barriers as part of the design of the new bridge and will continue to discuss additional measures with Lyackson. Assessment of potential Project-related effects on human health, including community and social factors, are presented in Section 7.1 of the Application. | Addressed in Application | Development of safety barrier policy for new bridges in the Lower Mainland. Implementation of mitigation measures outlined in Section 7.1 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|-------------------------|
| <p>The potential spread of social problems, including drug and sex trafficking, to more areas in the Lower Mainland due to economic change.</p> <p>Bottleneck at current Tunnel hampers illegal drug traffic - new Bridge will facilitate drug flow.</p> <p>New bridge will create proliferation of prostitution and drugs.</p> <p>Areas under Bridge will attract homeless population. Value added parks will not offset social impacts.</p> | <p>While not assessed as a Value Component in the Application, the potential for “at-risk populations” to use/congregate in areas near the bridge will be considered in Section 7.1 of the Application.</p> | <p>Addressed</p> | <p>None</p> |

| 8.0 ACCIDENTS AND MALFUNCTIONS | | | |
|--|--|--------------------------|--|
| <p>Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.</p> <p>In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | An Emergency Response and Spill Contingency Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills | Addressed in Application | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |
| Section appears to focus exclusively on the construction phase. Lyackson’s concerns are with the full life cycle - construction, operations, and deconstruction. | Section 8.0 (Accidents and Malfunction) addresses all aspects of the Project including construction, Tunnel decommissioning and operations. During construction and decommissioning, construction personnel will act in accordance with the Emergency Response and Spill Contingency Plan. During operations, accidents and other types of emergencies will be managed in accordance with the Ministry’s Highway Maintenance Specifications for Emergency Maintenance and related standards. | Addressed in Application | Adherence to appropriate plans, specifications and standards. |

| OTHER ISSUES | | | |
|---|---|---------------|--------------------------------|
| Consultation with Lyackson identified issues outside of the environmental assessment process, Aboriginal Interests, Aboriginal Consultation, Aboriginal Participation and Project-Related Opportunities, and sections of the Application. | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Congestion at Richmond-Vancouver border | Traffic analysis shows that approximately 60 per cent of northbound morning Tunnel traffic is destined to Richmond, and that traffic volumes at the Oak Street and Knight Street bridges have been declining since 2010. While Oak Street is likely to remain congested due to signal lights at Oak Street and 70th Avenue in Vancouver, the Project is not expected to result in more traffic driving over Oak Street Bridge each day. The new replacement bridge and the Highway 99 improvements will increase the convenience of accessing transit and provide an efficient route to the Canada Line stations in Richmond for commuters continuing to Vancouver. Traffic is addressed in Section 5.1 of the Application. | Addressed | None |

|--|--|------------------|-------------------------|
| <p>Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River.</p> | <p>Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> | <p>Addressed</p> | <p>None</p> |

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. *Environmental Assessment Act* (B.C. *EAA*), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. *EAA* sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. *EAA*, and that it requires an EAC.

The Project as proposed is not subject to review under the *Canadian Environmental Assessment Act, 2012*, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the *Environmental Assessment Act*.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------------|-------------------------|
| Social and cultural effects and the adequacy of Environment Assessment (EA) methodology. | <p>Concerns related to the adequacy of Environmental Assessment are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Social and cultural effects of the project are considered in Part C of the Environmental Assessment Application (Application). Where Aboriginal Groups values and perspectives have been provided to the Proponent regarding environmental, economic, social, heritage or health valued components (VCs), they have been incorporated, where applicable into the Part B assessment of those VCs.</p> | Referred to EAO | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|-------------------------|
| Strength of Claim assessment and related depth of consultation. | Concerns related to the strength of claim assessment have been referred to EAO and MARR. | Referred to EAO and MARR | None |
| Federal government participation in regulatory process and participation of federal government in Working Group. | Ministry reviewed the need for a federal review with the federal government. The Project did not meet the Canadian Environmental Assessment Agency (CEAA) requirements for a federal review. Federal agencies, including Environment and Climate Change Canada, are members of the Technical Working Group. | Addressed | None |
| Hwlitsum's assignment on Schedule B as a sub-group of Penelakut | Concerns related to Hwlitsum's assignment on Schedule B have been referred to the Environmental Assessment Office (EAO). | Referred to EAO | None |
| Request to be referred to as Hwlitsum First Nation | Hwlitsum's request to be referred to as Hwlitsum First Nation is acknowledged; however, the name is reproduced verbatim from the Section 11 Order. Hwlitsum's point that they have been recognized as a First Nation by government entities, including the BC Treaty Commission, has been added to Aboriginal Consultation Report #2 and to this Issues Summary Table. | Addressed | None |

ABORIGINAL INTERESTS

There are potential Project related impacts to Hwlitsum's title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape

Quality of experience while engaged in or tied to traditional use

- cultural landscape

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

Quality of experience while engaged in or tied to traditional use

- changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
- Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Hwlitsum as a result of the Project are not expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|--|
| <p>Hwlitsum “is greatly concerned that the Project will negatively impact our ability to fish, hunt and gather as we have done since time immemorial. These practices are central and integral to our Hwlitsum and Coast Salish identity and without them, we are unable to continue to pass on the teachings of generations of our ancestors.”</p> | <p>Hwlitsum’s ability to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife, residual effects on the exercise of Aboriginal Interests by Hwlitsum as a result of the Project are not expected.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in all Sections 4.4.4 (Fish and Fish Habitat Mitigation Measures), 4.6.4 (Marine Mammals Mitigation Measures), 4.7.4 (Vegetation Mitigation Measures), and 4.8.4 (Terrestrial Wildlife Mitigation Measures)</p> |
| <p>Hwlitsum’s access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel and the importance of working closely with communities to ensure negative effects are avoided.</p> | <p>Hwlitsum’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A negligible effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation measures outlined in Section 5.2.4 (Marine Use Mitigation Measures)</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Social effects of the Project on knowledge transmission, language loss, dependency and social interaction.</p> | <p>Social effects of the Project on Hwlitsum’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3.8 and Section 10.3 of Part C of the Application.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application</p> |
| <p>Protection of Hwlitsum’s rights to harvest within the Project area. Importance of ensuring fish and fish habitat is protected for future generations of Hwlitsum.</p> | <p>Hwlitsum’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife), residual effects on the exercise of Aboriginal Interests by Hwlitsum as a result of the Project are not expected.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife)</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|-------------------------|
| <p>Consideration of cumulative effects on aboriginal rights, including measurement against a pre-industrial baseline.</p> | <p>The Ministry’s cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed.</p> | <p>Addressed</p> | <p>None</p> |
| <p>Absence of a comprehensive study of cumulative effects on the Fraser River.</p> | <p>While the Ministry acknowledges that Hwlitsum is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project.</p> | <p>Addressed</p> | <p>None</p> |

ABORIGINAL CONSULTATION

Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.

Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.

In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.

Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised by Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

| Importance of having opportunities for the community to learn about the Project. | The Ministry met with the Hwlitsum community and will continue to work with Hwlitsum in accordance with the Aboriginal Consultation Plan. | Ongoing | Ongoing consultation |
| Traditional Use Study: <ul style="list-style-type: none"> • Funding for Traditional Use Study (TUS). • Amount of funding provided for TUS. | The Ministry signed a funding agreement with Hwlitsum which provided funding for a Traditional Use Study. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT-RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project's Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

- Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests
- Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes
- Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns
- Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes
- Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects
- Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.
- Incorporate community and traditional knowledge in Project components

Document and report to EAO on the Ministry's Aboriginal consultation program at times specified by EAO.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|---|
| Opportunities for cultural recognition and naming. | The Ministry is exploring opportunities for cultural recognition and naming and will work with Hwlitsum on this matter. | Ongoing | Discussions with Hwlitsum to explore opportunities related to cultural recognition and naming, art and interpretive signage |
| Project-related employment, training, contracting, and economic development opportunities. | The Ministry is committed to working with Hwlitsum to identify potential opportunities to benefit from the Project. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Hwlitsum to identify ways to support community preparedness. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Hwlitsum on the type of information that would be useful. |
| Revenue sharing opportunities from tolling. | Revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application. | Addressed | None |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|--|
| <p>Change in flow rates after Tunnel removal.</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm.</p> <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor.</p> <p>River Hydraulics and River Morphology are addressed in Section 4.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4</p> |
| <p>Lack of inclusion of Deas Slough and the stagnant waters east by the rowing club in the river hydraulics and morphology study.</p> | <p>Deas Slough and the stagnant waters east by the rowing club were included in the River Hydraulics and River Morphology study. River Hydraulics and River Morphology are addressed in Section 4.1.</p> | <p>Addressed</p> | <p>None</p> |

SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Potential effects of run off from bridge and tunnel decommissioning</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.2.4</p> |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|--|
| <p>Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon.</p> <p>Hwlitsum consider the creation and preservation of habitat for fish and wildlife as a key concern and priority.</p> <p>Hwlitsum have a strong connection to the Project area and to the river and are concerned with any additional impacts on fish and fish habitat.</p> <p>Elders are concerned with habitat loss partly due to “the mismanagement of fisheries by DFO” and expressed concerns related to future generations and practice of traditional activities.</p> <p>“What I say about the loss of these fish, including eulachons, is it is death by a 1000 cuts”</p> | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon, and salmon to Hwlitsum and is committed to avoiding or mitigation any potential effects. Fish and Fish Habitat are discussed in Section 4.4</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.4.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|--|
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon.</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.3.4 and 4.4.4</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River.

Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.

Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan

Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Hwlitsum has not voiced any specific issues or concerns with respect to Marine Mammals. | | | |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail marsh that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management.

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Invasive plant species and proposed plans to manage presence during construction.</p> | <p>Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.7.4 (Vegetation Mitigation Measures)</p> |
| <p>Inclusion of culturally significant plants in planting plans and opportunity for Hwlitsum in the identification of plants, and planting work.</p> | <p>Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans.</p> | <p>Addressed</p> | <p>The Ministry will develop planting plans with consultation from Aboriginal Groups</p> |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|--|
| <p>Potential light and noise effects on wildlife</p> | <p>The Ministry understands that Hwlitsum is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
| <p>Potential effects of the bridge structure on species such as waterfowl and migratory birds. Concern with the effects of the Project on species hunted by Hwlitsum such as on ducks and geese</p> | <p>The Ministry understands that Hwlitsum is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds including ducks and geese. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Development of an Air Quality and Dust Control Management Plan for inclusion of the Construction Environmental Management Plan.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Hwlitsum has not voiced any specific issues or concerns with respect to Air Quality. | | | |

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry’s 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Hwlitsum has not voiced any specific issues or concerns with respect to Atmospheric Noise. | | | |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

A negligible effect on access to instream locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Potential effects of construction during fishing season on fishing activities.</p> <p>Impacts of Tunnel decommissioning on Aboriginal fisheries, specifically as it relates to timing.</p> | <p>Potential interference with Hwlitsum fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |
| <p>Facilitation of increased shipping in the river. “Our concern being a salmon culture is there would be a build-up of ships which makes it impossible for us to fish and puts us in hazardous situations”.</p> | <p>The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river.</p> | <p>Addressed in Application</p> | <p>None</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operations, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Address temporary effects on existing land use during construction and incorporate land use considerations into a Traffic Management Plan.

Incorporate land use considerations into a Marine Construction Plan.

Reconnect recreational trails.

Residual & Cumulative Effects

There is a high, short-term probability of disturbance to residential, commercial and industrial land uses.

There is a high, short-term probability of disturbance to recreational uses near the new bridge.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------|--------------------------------|
| Interest in the inclusion of a single multi-use pathway. | The Project will include multi-use pathways on both sides of the new bridge, which will provide new and enhanced opportunities for cycling and pedestrians, as well as enhanced connections to community trails and cycling routes for interchange and overpass reconstructions. | Addressed | None |

5.5 VISUAL QUALITY

The new bridge will add noticeable visual features to the landscape and will change visual conditions adjacent to the Project alignment. Replacement of interchanges also has the potential to change visual conditions of these locations. At distances greater than one kilometer, the bridge deck will merge with the natural landscape and the main visual features will be the bridge towers. Changes in visual quality at interchanges will be minor as visual quality in such areas is currently influenced by existing transportation infrastructure.

Effects

During construction, no to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

During operation, a measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Minimize effects through Project design.

Use of vegetated buffers to minimize visual effects to residential developments within close proximity to the bridge in Delta.

Residual & Cumulative Effects

There is a moderate, long-term probability of disturbance to visual quality.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Hwlitsum has not voiced any specific issues or concerns with respect to Visual Quality. | | | |

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

During construction, no to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

During operation, a measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a change find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|--|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites and specific concern for any effects on the ǻǻqtinǻs/Tl'uqtinus site and potential archaeological values at interchanges.</p> | <p>The Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Hwlitsum.</p> <p>All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment.</p> <p>Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |
| <p>Participation in archaeological fieldwork and review of archaeological draft reports.</p> | <p>Hwlitsum will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports</p> | <p>Addressed</p> | <p>Hwlitsum will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports.</p> |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

7.0 HUMAN HEALTH

A negligible effect on access to instream locations for traditional use has been determined.
 A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.
 A negligible effect on access to upland locations for traditional use has been determined.
 A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.
 Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on human health are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Hwlitsum has not voiced any specific issues or concerns with respect to Human Health. | | | |

8.0 ACCIDENTS AND MALFUNCTIONS

Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.

In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|--|
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | An Emergency Response and Spill Contingency Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills | Addressed in Application | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |

| OTHER ISSUES | | | |
|---|--|---------------|--|
| Consultation with Hwlitsum identified issues outside of the environmental assessment process, Aboriginal Interests, Aboriginal Consultation, Aboriginal Participation and Project-Related Opportunities, and sections of the Application. | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Potential for falling snow and ice | The design of the new bridge is similar to the Alex Fraser Bridge, with cable stays on the outside of the span. There are no cables crossing the deck. Snow and ice control measures will be reflected in the bridge design. | Addressed | Inclusion of snow and ice control measures in bridge design. |

APPENDIX C

Cowichan Tribes

1.0 Introduction

Cowichan Tribes engaged directly with the Ministry on the Project and also collectively with *Halalt First Nation, Penelakut Tribe and Stz'uminus First Nation* as member nations of the Cowichan Nation Alliance. *The Ministry provided information and funding directly to Cowichan Tribe.* However, Cowichan Nation Alliance provided feedback and participated in meetings and fieldwork. Unless noted otherwise, Cowichan Tribe represented Cowichan Nation Alliance in correspondence, meetings and fieldwork. As such, Cowichan Nation Alliance is only noted when Cowichan Tribes was not the Cowichan Nation Alliance representative. This overview provides information on consultation with Cowichan Tribes specifically, and with Cowichan Nation Alliance as applicable to Cowichan Tribes.

This appendix provides a summary of the information presented in Part C Aboriginal Consultation (Part C) of the Application for an Environmental Assessment Certificate (the Application) regarding the assessment of effects on Aboriginal Interests. Aboriginal Interests are defined as asserted or determined Aboriginal rights, including title, or treaty rights. This appendix presents the information specific to Cowichan Tribes.

The organization of the information presented generally follows Part C and includes the following sections:

- Consultation;
- Community Profile;
- Existing Conditions;
- Potential Effects;
- Mitigation;
- Residual Effects; and
- Summary and Conclusion.

For more detailed information on the effects assessment on Aboriginal Interests related to Cowichan Nation Alliance, refer to the following sections of Part C:

- Consultation with Cowichan Tribes (**Section 10.1.2.10**);
- Cowichan Tribes community profile (**Section 10.1.1.1**);
- Description of existing Cowichan Tribes Aboriginal Interests (**Section 10.1.3.2**);
- Assessment of potential effects of the Project on the exercise of Cowichan Tribes Aboriginal Interests (**Section 10.1.3.3**);

- Mitigation relating to potential effects on Aboriginal Interests (**Section 10.1.3.4**); and
- Residual effects on Cowichan Tribes Aboriginal Interests following application mitigation (**Section 10.1.3.5**).

A summary of the Aboriginal Interests Assessment for Cowichan Tribes is also provided in **Section 10.1.3.8**.

The summary presented in this appendix also incorporated information found in the Cowichan Tribes Overview Table (**Appendix C2**), which provides detailed information regarding:

- Cowichan Tribes issues and concerns identified to date;
- Identification of effects on VCs and ICs that relate to the assessment of effects on Cowichan Tribes' Aboriginal Interests;
- The Ministry's response to specific issues and concerns raised by Cowichan Tribes;
- The status of these issues and concerns; and
- Next steps required to address outstanding issues and concerns.

2.0 Consultation

This section provides information regarding the consultation activities that the EAO and Ministry carried out prior to submission of the Application.

2.1 EAO-led Consultation Activities

2.1.1 Capacity Funding

When a provincial agency is a proponent of a project going through a provincial EA under the British Columbia *Environmental Assessment Act* (BCEAA), that agency provides funding to Aboriginal Groups to support their involvement in pre-Application and Application review phases in place of EAO providing such funding. The Ministry's provision of capacity funding is discussed in the following section, Proponent-led Consultation Activities.

2.1.2 Participation in Working Group

EAO invited Cowichan Tribes and all other Aboriginal groups identified in Schedule B of the Section 11 Order to participate as members of a Working Group.

During the Pre-Application stage, EAO held two Working Group meetings where the Ministry presented information on the Project and the environmental assessment process and received and responded to comments on those presentations. Halalt First Nation represented Cowichan Nation Alliance at the first meeting. Halalt First Nation and Cowichan Tribes represented Cowichan Nation Alliance at the second meeting..

The first Working Group meeting, held January 2016, focused on the environmental assessment process, Project overview and update, Key Areas of Study, draft Application Information Requirements overview, and preliminary conclusions from study results.

The second working group meeting, held March 2016, focused on the environmental assessment process, list of materials available on the Project website, review of comments received on, and resulting changes to, the draft Application Information Requirements, and a description and rationale of the assessment areas. Working Group comments raised by Cowichan Nation Alliance in relation to the draft Application Information Requirements resulted in Aboriginal groups being invited to participate in river-otter related fieldwork in April 2016. The objectives of this work were to document river otter presence or potential presence within the Regional Assessment Area, document and describe use of riparian and high use areas and identify potential Project-related effects.

Cowichan Tribes also participated in the completeness review for the Application that considered whether the Application included information requirements set out in the Application Information Requirements.

It is anticipated that Cowichan Tribes will continue as an active member of the Working Group through the environmental assessment process.

2.2 Proponent-led Consultation Activities

The Ministry began consultation with Cowichan Tribes in early 2014 in order to identify the nature and scope of Cowichan Tribes' Aboriginal Interests and how they might be impacted by the Project. Following is a summary of consultation activities led by the Ministry with Cowichan Tribes. A more detailed discussion is provided under the Cowichan Tribes section in **Section 10.1.2.10 Overview of consultation with each Schedule B Aboriginal Group**. The following sections represent the main activities undertaken in support of Proponent-led consultation and include the following:

- Provision of capacity funding;
- Traditional use, traditional knowledge and other studies;
- Examples of Consultation Activities; and
- Concerns Identified to Date.

2.2.1 Capacity Funding

The Ministry entered into a Participation Funding Agreement, including the Initial Consultation and Pre-Application phases for consultation, with Cowichan Tribes. The Ministry has been working with Cowichan Tribes regarding their needs for capacity funding to facilitate their participation in the Application Review Phase. Consultation activities that are anticipated to be undertaken during the Application Review phase that will be supported by capacity funding include participation in technical reviews and analyses, involvement in ongoing consultation activities, and presentation of key information regarding their respective Aboriginal Interests.

2.2.2 Traditional Use, Traditional Knowledge & Other Studies

The Ministry provided additional funding to Cowichan Tribes for the preparation and submission of Traditional Use, Traditional Knowledge or other studies. Cowichan Tribes worked with other Cowichan Nation Alliance members and submitted the following traditional use studies:

- *Cowichan Nation Traditional, Current, and Planned Future Use of the George Massey Tunnel Replacement Bridge Project Area, prepared by Candace Charlie for Cowichan Tribes, on behalf of the Cowichan Nation Alliance, August 9, 2015*
- *George Massey Tunnel Replacement Project: Cowichan Occupation and Use of the Project Lands, prepared by Dorothy Kennedy for David Robbins of Woodward and Co., Counsel for the Cowichan Tribes, on behalf of the Cowichan Tribes, August 25, 2015*

Cowichan Nation Alliance also provided to the Ministry: *Historical Geography of Cowichan Land Use and Occupancy Lower Fraser River: Map Series and Report, prepared for Woodward and Company and the Cowichan Tribes by Kenneth G. Brealey, May 31, 2010.*

The purpose of such studies is to identify Aboriginal input and traditional knowledge for inclusion and consideration in the EA. In addition, studies were funded to enhance the Ministry's understanding of Aboriginal Interests and Aboriginal Group's past, present and desired future use as it pertains to the exercise of Aboriginal Interests within the Project area and the potential adverse effects on identified Aboriginal Interests.

2.2.3 Examples of Consultation Activities

A number of consultation activities were undertaken with Cowichan Tribes during both the Initial Consultation Phase and the Pre-Application Consultation Phase as follows:

Initial Consultation Phase Activities - The Ministry recognized the importance and value of early engagement with Schedule B Aboriginal Groups and undertook an Initial Consultation Phase prior to the Pre-Application Phase. The Initial Consultation Phase concluded in December 16,

2015 with submission of the Project Description and Key Areas of Study document. The focus of the Initial Consultation Phase was a collection of baseline information and sharing of draft EA-related documents (i.e. Project Description and Key Areas of Study, Application Information Requirements (AIR)). The main consultation activities the Ministry undertook with Cowichan Tribes included:

- Sharing of Project-related information including focused presentation on topics on interest and/or concern to Cowichan Tribes;
- Funding for Cowichan Tribes' participation in Project consultation activities and EA process;
- Cowichan Tribes participation in field studies;
- Site visit;
- Review of draft EA documents such as the Project Description and Key Areas of Study, Heritage Resources Overview Assessment/Archaeological Overview Assessment, AIR, Heritage Resources Assessment and Aboriginal Consultation Plan;
- Meetings with Cowichan Tribes Chief and Council, staff, consultants, and elders; and
- Response and follow up with Cowichan Tribes regarding the identification and resolution of issues.

Pre-Application Consultation Phase Activities - The Pre-Application Consultation Phase began with the filing of the Project Description and Key Areas of Study document on December 16, 2015 and concluded with the submission of the Application. This phase included the issuance of the Section 11 Order, AIR development and collection of baseline information (may include submission of permit applications). The main consultation activities the Ministry undertook with Cowichan Tribes included:

- Sharing of Project-related information including focused presentation on topics on interest and/or concern to Cowichan Tribes;
- Funding for Cowichan Tribes' participation in Project consultation activities and EA process;
- Meetings with Cowichan Tribes leadership, staff, consultants, elders and membership and Cowichan Nation Alliance representatives;
- Cowichan Tribes participation in fieldwork;
- Cowichan Tribes participation in the EA Working Group;
- Review of draft EA documents such as the Application Information Requirements, Aboriginal Consultation Plan, and Aboriginal Consultation Reports; and
- Response and follow up with Cowichan Tribes regarding the identification and resolution of issues.

2.2.4 Concerns Identified to Date

As outlined above, Cowichan Tribes’ concerns, identified through consultation undertaken to-date, are presented in **Appendix C2 Cowichan Tribes Overview Table**. The Ministry’s response to Cowichan Tribes’ key concerns regarding potential impacts on Cowichan Tribes’ Aboriginal Interests are outlined below:

Table 1 Concerns Identified to Date

| Concerns Identified to Date | Response |
|--|--|
| <p>Potential impacts to Cowichan Tribes title, Rights and culture.</p> | <p>Potential Project related impacts to Cowichan Tribes title, Rights and culture, the level of effect predicted, and mitigation measures are outlined the Application. The Ministry will continue to consult with Cowichan Tribes to ensure any effects are minimized.</p> |
| <p>Aboriginal participation and Project-related opportunities</p> <ul style="list-style-type: none"> • Potential employment, training, contracting and economic development opportunities • Community preparedness • Cultural recognition and naming • Revenue sharing opportunities from tolling • Re-establishment of a site on ʔəqtinəs/Tl’uqtinus site for residential and/or commercial purposes • Surplus land | <p>The Ministry is committed to working with Cowichan Tribes to identify potential employment, training, contracting and economic development opportunities and to identify ways to support community preparedness.</p> <p>The Ministry is exploring opportunities for cultural recognition and naming and will work with Cowichan Tribes on these opportunities.</p> <p>The provincial tolling strategy stipulates that revenue from tolling may only be used to defray the costs of designing, constructing, operating and maintaining highways.</p> <p>The Ministry notes Cowichan Nation Alliance’s wish to re-establish a site on ʔəqtinəs/Tl’uqtinus site for residential and/or commercial purposes. The Ministry will continue to consult with Cowichan Nation Alliance on this matter.</p> <p>As part of the Project, agricultural land will be protected as much as practical. Once the project is completed, there will be a determination of surplus lands, if any, and disposition will follow the appropriate process including consultation</p> |

| Concerns Identified to Date | Response |
|---|--|
| <p>Effects to fish and fish habitat</p> <ul style="list-style-type: none"> • Importance of fish and fish habitat including species of cultural and economic importance such as eulachon, sturgeon and salmon • Potential effects of pile driving, blasting and underwater noise generated by Tunnel decommissioning and other construction activities | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon, salmon to Cowichan Tribes and is committed to avoiding or mitigating any potential effects.</p> <p>The Ministry designed a clear span bridge over the Fraser River South Arm and Deas Slough to avoid or minimize Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat.</p> <p>As outlined in Section 4.3 (Underwater Noise), sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources will be effectively mitigated by scheduling activities during period of low tide, when work can be completed under shallow water conditions or in the dry.</p> |
| <p>Environmental Assessment (EA):</p> <ul style="list-style-type: none"> • Adequacy of methodology to address social and cultural effects • Process and associated timelines • Strength of Claim Assessment | <p>The Ministry acknowledges the importance of Cowichan Tribes' involvement in the environmental assessment process and is committed to funding Cowichan Tribes' participation in the Initiation Consultation and Application Review phases.</p> <p>Cowichan Tribes' concerns related to Environmental Assessment including the adequacy of methodology to address social and cultural effects, process and associated timelines are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Concerns relating to the Strength of Claim Assessment have been referred to EAO and MARR.</p> |

| Concerns Identified to Date | Response |
|---|---|
| <p>Social effects of the Project on Cowichan Tribes' ability to transfer knowledge, language and participate in socio-cultural practices</p> | <p>Social effects of the Project on Cowichan Tribes' ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3 and Section 10.3 of Part C of the Application.</p> |
| <p>Cumulative effects:</p> <ul style="list-style-type: none"> • Consideration of cumulative effects on Aboriginal rights • Absence of comprehensive study on cumulative effects on the Fraser River | <p>The Application includes historical context relating to changes in use over time by Cowichan Tribes and other Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by Cowichan Tribes or was otherwise available from publicly available sources. However, there is no EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests.</p> <p>While the Ministry acknowledges that Cowichan Tribes is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project.</p> |

| Concerns Identified to Date | Response |
|--|--|
| <p>Concerns related to dredging, potential for increased vessel traffic and larger vessels resulting from Tunnel decommissioning</p> | <p>Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project, including the decommissioning of the Tunnel, will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> |
| <p>Potential effects on Fraser River flow rates after Tunnel removal</p> | <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Flow rates are discussed in Section 4.1 (River Hydraulics).</p> |
| <p>Potential effects of run off and drainage</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> |

3.0 Community Profile: Cowichan Tribes

Cowichan Tribes is governed by a chief and council with a two-year term under an *Indian Act* electoral system. Cowichan Tribes has a 13-member council, with the current term expiring in December 2017.

While the First Nations affiliated with the Cowichan Nation Alliance have explained that they traditionally resided on both sides of the Strait of Georgia as part of a seasonal round, Cowichan Tribe's main present-day community is located in Cowichan, on southeast Vancouver Island. The largest First Nation in British Columbia, Cowichan Tribes has 2,455 of its total membership of 4,755 living on reserve. The Project area does not overlap Cowichan Tribes' current or former reserve lands.

Cowichan Tribes is, or has been, affiliated with the Hul'qumi'num Treaty Group, along with the other three Cowichan Nation Alliance members, Lake Cowichan First Nation and Lyackson First Nation. These First Nations have been described as speakers of the "Island" dialect of Halkomelem (*Hul'q'umi'num*), and have referred to themselves collectively as *Hul'qumi'num Mustimuhw*.

The Hul'qumi'num Treaty Group member bands collectively assert a core territory or "title lands" and a wider marine or fishing territory, as described in its Statement of Intent to the British Columbia Treaty Commission. Core areas over which title is asserted include but are not limited to "the south arm of the Fraser River, including Canoe Pass, up to and including Douglas Island, with lands on the north shore of the south arm up to Sapperton Channel (New Westminster), the islands in the south arm of the Fraser River and the south bank of the Fraser River along Canoe Pass up to Deas Island". This area is subsumed within the broader marine or fishing territory. The core territory of the Hul'qumi'num Treaty Group overlaps the Project area at the Tunnel crossing.

Cowichan Tribes, along with each of the other Cowichan Nation Alliance member First Nations, has a Forest Consultation and Revenue Sharing Agreement with the Province of British Columbia. The territorial maps attached to these agreements typically include areas on the western side of the Strait of Georgia only.

Locations along the South Arm of the Fraser River of importance to Cowichan Tribes, along with the other Cowichan Nation Alliance member First Nations, in the vicinity of the Project include but are not limited to *Tl'uqtinus*, spanning the north shore from opposite Deas Island to opposite Tilbury Island, and *Hwlhits'um* or *Xwulit'sum*, on Canoe Pass. Both of these areas are considered by Cowichan Nation Alliance member bands, including Cowichan Tribes, as

ancestral village and resource sites. A member First Nation of the organization has previously reported that the Cowichan Nation Alliance is working to re-establish a permanent land base at *Tl'uqtinus* for residential and/or commercial purposes. Cowichan Nation Alliance's *Tl'uqtinus* claim area is shown in **Section 10.1.3.2 Existing Conditions** in Plate 1: Lands of Tl'uqtinus Claim Area.

3.1 Cowichan Tribes Aboriginal Interests: Existing Conditions

This section provides a high level of summary of past, present, and desired future use of the proposed Project area and surroundings for traditional purposes that are or may be connected with the exercise of Cowichan Tribes' Aboriginal Interests. A more detailed discussion, including sources used, is provided under Cowichan Tribes in **Section 10.1.3.2 Existing Conditions**. In the following summary, specific information on Cowichan Tribe's traditional use has been supplemented with general information on traditional use by Cowichan Nation Alliance and Hul'qumi'num Treaty Group Nation Alliance member First Nations.

3.1.1 General

- Cowichan Tribes has Aboriginal Interests that are known to overlap or lie in the vicinity of the Project corridor, which includes a portion of the South Arm of the Fraser River.
- Cowichan Tribes followed a seasonal round of resource use and regional settlement that took them from their winter residences on Vancouver Island and the Gulf Islands across the Strait of Georgia to the Fraser River estuary, where they resided for all or part of the annual salmon runs (April to through October), or, in some instances, year-round. The seasonal round is described in Part C.
- Cowichan Tribes has identified past and ongoing effects that have altered and reduced use over time, constraining the current exercise of their Aboriginal Interests.
- A member First Nation of the organization has previously reported that the Cowichan Nation Alliance is working to re-establish a permanent land base at *Tl'uqtinus* for residential and/or commercial purposes.

3.1.2 Fishing

- Cowichan Tribes harvested the following species historically on the South Arm of the Fraser River: sockeye and pink salmon, sturgeon, shellfish, and marine mammals. Cowichan Nation Alliance has previously reported that now filled-in sloughs and streams in or near Highway 99 once supported coho and eulachon, which were also harvested while they were resident on the Fraser River.
- Cowichan Nation Alliance reports that *Tl'uqtinus* was used seasonally for harvesting purposes.

- Areas within the wider Fraser River estuary were also utilized by *Hul'qumi'num*'-speaking peoples for fishing salmon, sturgeon, groundfish, and other marine resources on the foreshore (e.g., Tsawwassen, Point Roberts, Boundary Bay). Certain species (e.g., sockeye and pink salmon, sturgeon, eulachon, trout, flounder) could only be obtained in, or were preferred to be taken at, Fraser River-based locations.
- The Hul'qumi'num Treaty Group have reported that during the reserve creation era in the late nineteenth century, government officials were aware of *Hul'qumi'num Mustimuhw* fishing interests at the Fraser River; however, no reserves were set aside for them in the area. The Hul'qumi'num Treaty Group have also reported that government regulations introduced in the same era had the effect of restricting their access to fishing in the Fraser River. Despite these changes, *Hul'qumi'num Mustimuhw* say they continued to use the Fraser River for fishing, including commercially, into the early twentieth century.
- Member First Nations of the Cowichan Nation Alliance have been attempting to restore former fisheries within the Fraser River through Fisheries and Oceans Canada (DFO). Access to sockeye for member First Nations is said to be provided by DFO annually in Johnstone Strait and “off the mouth of the Fraser River”. In the vicinity of the Project area, however, access has been subject to negotiations with First Nations local to the lower Fraser River, and has been limited, occurring only in 2005, 2006, and 2008. In those years, the specific locations in the South Arm in which member First Nations of the Hul'qumi'num Treaty Group fished for food, social, and ceremonial (FSC) purposes under communal licences was below the Port Mann Bridge generally, as well as specifically, on some occasions, below the easterly point of Kirkland Island (i.e., downstream of the Project area). The Cowichan Nation Alliance has stated that it is in ongoing, active litigation over its asserted fishing rights on the South Arm of the Fraser River.

3.1.3 Hunting/Trapping

- Cowichan Nation Alliance has previously reported that Highway 99 was built on what was once a prime harvesting location for deer, ducks, and geese, among other species.
- Along the Fraser River, including Canoe Pass, as well as elsewhere in their collective territory, brant goose, canvasback duck, common merganser, and mallard have been specifically identified as harvested species by Cowichan Tribes, and that this harvesting would have taken place in the fall. Canada goose, northern shoveler, and green-winged teal would have been available to the Cowichan people year-round.
- The south shore of Lulu Island, along the South Arm of the Fraser River, has been reported as a prime spot for trapping beaver, mink, and muskrat; bear, grouse, elk, squirrel, and porcupine were also hunted by the Cowichan people on the South Arm. Cowichan Tribes may also have hunted for mountain goat in the mountains of the lower Fraser River. The Cowichan Nation Alliance as a group has stated a desire to resume the harvest of traditional resources in the Project area.

- Cowichan Nation Alliance has also stated that its members revere bald eagles, which were not hunted. Their Elders have indicated that eagle numbers in the Richmond area have been dwindling each year. Breeding habitat along the Highway 99 corridor on Lulu Island has been previously noted.

3.1.4 Gathering

- Cowichan Nation Alliance report that in the marshy areas south of Canoe Passage near Brunswick Point – in the area of *Xwulits'um*, or place for cutting (cattails) – as well as in the area of *Tl'uqtinus* and across the Fraser River on Tilbury Island, several varieties of cattails and rushes (*stth'equn*) were once harvested.
- Berries and other plants were gathered and cultivated by the ancestors of the Cowichan Nation Alliance member bands at *Tl'uqtinus*, and were harvested from other locations in the Project area. These plants included wild rose, rose hips, crabapples, elderberries, horsetail, labrador tea, Indian hemp, trembling aspen, mock orange, oregon grape, maple leaves, cranberries, blueberries, blackberries, wapato, bulrushes/reeds (*stth'equn*), as well as seaweed. With respect to berry plants at *Tl'uqtinus* specifically, a 1979 map produced by Environment Canada noted an “Indian residence” at this location, accompanied by the caption (not attributed to any specific Aboriginal group): “It is known that the Indians who lived here for several thousand years harvested berries from the bogs and used fire to maintain open areas for the berry bushes by preventing encroachment from pine trees”.
- Cowichan Nation Alliance has indicated that they wish to see existing bogs on Lulu Island near the Highway 99 corridor – specifically, one near Williams Road (which runs perpendicular to Highway 99) and another near the Richmond Nature Park (bisected by Highway 99 at Westminster Highway) – protected to support future use of traditional resources, like berries and other bog ecosystem flora. At *Tl'uqtinus*, which is currently surrounded by blueberry farms, Cowichan Nation Alliance has raised the potential for their former berry grounds to be re-established.
- Tree species available in the vicinity of the Fraser River and traditionally used by the Cowichan Tribes for manufacturing include crabapple, willow, alder, cottonwood, cedar, spruce, aspen, yew, hemlock, and vine maple.

3.1.5 Archaeology and Cultural Heritage Interests

- Locations along the South Arm of the Fraser River of importance to the Cowichan Nation Alliance in the vicinity of the Project include, but are not limited to, *Tl'uqtinus*, spanning the north shore from opposite Deas Island to opposite Tilbury Island, and *Hwlhits'um* or *Xwulit'sum*, on Canoe Pass. Both of these areas are considered by Cowichan Nation Alliance member bands as ancestral village and resource sites.
- Cowichan Tribes has specifically noted the importance of archaeological site DgRs-17.

3.1.6 Other Related Interests

- Cowichan Nation Alliance has stated that it asserts Aboriginal title to *Tl'uqtinus*, and given where *Tl'uqtinus* is reportedly situated, to the Project footprint. The Cowichan Nation Alliance has expressed its view that this title includes the right to manage the land, determine the uses to which it can be put, and obtain any economic benefits from it. Cowichan Nation Alliance has advised that it is also working to re-establish culturally integral practices (e.g., harvesting fish, waterfowl, plants) on the South Arm and at the mouth of the Fraser River, including at and about *Tl'uqtinus*.
- The Cowichan Nation Alliance has previously reported that for the last generation its member First Nations have been rejuvenating their access to the waterways that once served as the highways for their ancestors, working with the currents and tides to travel for FSC purposes. The Cowichan Nation Alliance has expressed concern regarding the contaminants and the sustainability of vital habitats that are necessary to support their members.

4.0 Potential Effects

This section provides a summary of the methodology used to identify potential adverse effects of the proposed Project on the exercise of Aboriginal Interests by Aboriginal Groups during Project construction and operation, followed by a summary of potential effects on Cowichan Tribes' Aboriginal Interests, specifically. For a more detailed description, refer to **Section 10.1.3.3. Potential Effects**.

4.1 Methodology for Identification of Potential Effects

The first step in the effects assessment on Aboriginal interests was the identification of potential adverse effects on traditional use activities and related interests as a result of Project construction or operation. To evaluate these potential adverse effects, the findings of the following Valued Component (VC) chapters in Part B of the Application were considered, including identified mitigation measures, residual effects, cumulative effects and follow up strategies:

- **Section 4.4 Fish and Fish Habitat**
- **Section 4.6 Marine Mammals**
- **Section 4.7 Vegetation**
- **Section 4.8 Terrestrial Wildlife**
- **Section 5.2 Marine Use**
- **Section 5.3 Land Use**
- **Section 5.5 Visual Quality**

- **Section 6.1 Heritage Resources**
- **Section 7.1 Human Health**

The findings of the following Intermediate Component (IC) chapters were also considered in the assessment:

- **Section 4.1 River Hydraulics and River Morphology**
- **Section 4.2 Sediment and Water Quality**
- **Section 4.9 Air Quality**
- **Section 4.10 Atmospheric Noise**

The assessment of potential adverse effects of the Project on the exercise of Aboriginal Interests, including measures to address those effects, are presented in **Section 10.1.3.3** through **Section 10.1.3.5**, and largely applies the same methods used in Part B of the Application for the IC and VC assessments, as outlined in **Section 3.0 Assessment Methodology**.

In addition to information from the VC and IC assessments that support the assessment of potential effects on Aboriginal Interests, information from a Health Impact Assessment (HIA) undertaken to support Project planning, including mitigation recommendations, has been integrated into the assessment of potential effects on Aboriginal Interests. The HIA for the Project can be found at <https://engage.gov.bc.ca/masseytunnel>. A summary of the key findings is provided in **Section 7.2 Health Impact Assessment**.

4.2 Selection of Indicators

Four parameters were chosen as indicators to understand and evaluate potential Project-related effects on the exercise of Aboriginal Interests. The rationale for their selection is presented in the following table.

Table 2 Indicators for the Aboriginal Interests Assessment

| Indicator | Rationale for Selection |
|---|---|
| Access to preferred locations for the exercise of Aboriginal Interests | Project components or activities could result in changes in access to or patterns of travel between traditional use locations on land or water |
| Availability of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in distribution or movement, relative abundance, or habitat area or composition of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |
| Quality of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in the real or perceived quality of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |
| Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests | Project components or activities could result in: (1) direct sensory disturbance to traditional users (e.g., from noise, vibration); and/or (2) indirect changes to cultural practices, customs or traditions – i.e., cultural heritage or the expression and transfer of cultural values or ways of knowing (e.g., language, laws/governance, stories, spiritual beliefs) – tied to the cultural landscape or to the traditional use of specific traditional use locations or resources within that landscape. |

Potential adverse effects on the indicators noted above were analyzed in terms of the type and level of effect that Project components and activities may be expected to have on the exercise of Aboriginal Interests.

For the purposes of this assessment, no effect was understood to mean that no interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests would be expected. Where it was determined that an interaction, and potential effect, could occur, the following definitions were used to guide the characterization of the effect as negligible or measurable:

- Negligible – An interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests may occur, but modifications to the use of preferred options would not be expected.

- Measurable – Modifications to the exercise of Aboriginal Interests at preferred locations or in relation to preferred resources may be needed, and may be considered to be:
 - Minor (minimal or temporary modifications may be required to use preferred options),
 - Moderate (more frequent or longer term modifications may be required to use preferred options), or
 - Serious (permanent or indefinite modifications may be required potentially resulting in the loss of preferred options).

4.3 Identified Potential Effects

As noted above, the first step in evaluating potential adverse effects on Aboriginal Interests was a consideration of the findings for relevant Part B VCs, including identified mitigation measures, residual effects, cumulative effects and follow up strategies. The residual effects with the potential to result in an adverse effect on Aboriginal Interests are then carried forward in the assessment. Using the four indicators noted in the previous section, the potential Project-related effects and level of effect predicted in relation to Cowichan Tribes’ exercise of Aboriginal Interests remaining after Part B mitigation are as follows:

Table 3 Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests

| | Construction | | Operation | | Residual Potential Effects |
|---|--------------|------------|------------|------------|----------------------------|
| | Negligible | Measurable | Negligible | Measurable | |
| River locations for traditional use as a result of changes to physical characteristics of these locations | ✓ | | ✓ | | |
| Instream locations for traditional use | ✓ | | ✓ | | |
| Upland locations for traditional use | ✓ | | ✓ | | |

Table 4 Changes in Availability of Preferred Resources for the Exercise of Aboriginal Interests

| | Construction | | Operation | | Residual Potential Effects |
|--|--------------|------------|------------|------------|----------------------------|
| | Negligible | Measurable | Negligible | Measurable | |
| Fish resources for traditional use | ✓ | | ✓ | | |
| Marine mammal resources for traditional use | ✓ | | ✓ | | |
| Terrestrial wildlife resources for traditional use | ✓ | | ✓ | | |
| Vegetation resources for traditional use | ✓ | | ✓ | | |

Table 5 Changes in Quality of Preferred Resources for the Exercise of Aboriginal Interests

| | Construction | | Operation | | Residual Potential Effects |
|--|--------------|------------|------------|------------|----------------------------|
| | Negligible | Measurable | Negligible | Measurable | |
| Water used for cultural purposes | ✓ | | ✓ | | |
| Fish resources for traditional use | ✓ | | ✓ | | |
| Marine mammal resources for traditional use | ✓ | | ✓ | | |
| Terrestrial wildlife resources for traditional use | ✓ | | ✓ | | |

| Terrestrial wildlife resources for traditional use | ✓ | | ✓ | | |
| Vegetation resources for traditional use | ✓ | | ✓ | | |
| Air quality | ✓ | | ✓ | | |
| Noise | ✓ | ✓ | ✓ | ✓ | Construction - Potential temporary direct (minor) effect on quality of experience related to construction-related noise. Operation - Potential permanent direct (minor) effect on quality of experience related to traffic noise |

| | Construction | | Operation | | Residual Potential Effects |
|------------------------|--------------|------------|------------|------------|---|
| | Negligible | Measurable | Negligible | Measurable | |
| Ground-borne vibration | ✓ | | ✓ | | |
| Cultural landscape | | ✓ | | ✓ | <p>Construction - Potential temporary indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance</p> <p>Operation - Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses.</p> |

4.4 Potential Project-Related Effects on Cowichan Tribes' Aboriginal Interests

Using the methodology presented in **Section 10.1.3.3 Potential Effects**, Table 7 provides the potential incremental Project-related effects, following mitigation of Project-related effects on Part B VCs and ICs as described in Part B, related to Cowichan Tribes' Aboriginal Interests as summarized in Existing Conditions were identified for Project Construction and Operation. A discussion of potential Project-related effects on fishing, hunting/trapping, gathering and archaeology and cultural heritage follows the table.

Table 8 Summary of Potential Project-Related Effects

| Indicator | Potential Project-Related Effect |
|--|---|
| Project Construction | |
| Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Availability of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Experience in Exercising, or tied to the Exercise, of Aboriginal Interests | <ul style="list-style-type: none"> • Potential temporary direct (minor) effect on quality of experience related to construction-related noise • Potential temporary indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance |
| Project Operation | |
| Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Availability of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Experience in Exercising, or tied to the Exercise, of Aboriginal Interests | <ul style="list-style-type: none"> • Potential indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance while engaged in those uses • Potential permanent direct (minor) effect on quality of experience related to traffic noise • Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses |

4.5 Fishing

Species harvested historically on the South Arm of the Fraser River included sockeye and pink salmon, sturgeon, shellfish, and marine mammals. Areas within the wider Fraser River estuary were also utilized by *Hul'q'umi'num'*-speaking peoples for fishing salmon, sturgeon, groundfish, and other marine resources on the foreshore (e.g., Tsawwassen, Point Roberts, Boundary Bay). Certain species (e.g., sockeye and pink salmon, sturgeon, eulachon, trout, flounder) could only be obtained in, or were preferred to be taken at, Fraser River-based locations. Member First Nations of the Cowichan Nation Alliance have been attempting to restore former fisheries within the Fraser River through Fisheries and Oceans Canada (DFO).

The proposed Project has the potential to affect fishing practices through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred fishing locations by Cowichan Tribes, as a result of changes in river hydraulics or morphology, are expected to be negligible before mitigation. Potential changes in access to instream locations for fishing by Cowichan Tribes during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to fishing locations by Cowichan Tribes from instream construction activities are expected to be negligible. While it is acknowledged that Cowichan Nation Alliance member First Nations, including Cowichan Tribes, has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Mitigation measures identified in the fish and fish habitat assessment to address Project-related effects on fish are expected to be effective at addressing potential effects on the availability of fishing resources preferred by Cowichan Tribes. Further, as residual effects on fish identified in the fish and fish habitat assessment are not anticipated to affect population integrity, potential residual effects as a result of Project construction activities, would not be expected to measurably affect the availability of preferred fish resources.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of fishing resources preferred by Cowichan Tribes; therefore, Potential Project-related effects on Cowichan Tribes fishing would be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when fishing are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in Section 4.10 Atmospheric Noise are expected to largely address a potential Project-related effect to the quality of experience while fishing. At preferred fishing locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Cowichan Tribes.

Section 5.5 Visual Quality predicts that residual effects to visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Cowichan Tribes is fishing. As this landscape has been previously modified, the potential Project-related effect on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Cowichan Tribes' Aboriginal Interests related to fishing are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.6 Hunting/Trapping

Cowichan Nation Alliance reported that Highway 99 was built on what was once a prime harvesting location for deer, ducks, and geese, among other species. Along the Fraser River, including Canoe Pass, as well as elsewhere in their collective territory, brant goose, canvasback duck, common merganser, and mallard have been specifically identified as harvested species by Cowichan Tribes, and that this harvesting would have taken place in the fall. Canada goose, northern shoveler, and green-winged teal would have been available to the Cowichan people year-round. The south shore of Lulu Island, along the South Arm of the Fraser River, has been reported as a prime spot for trapping beaver, mink, and muskrat; bear, grouse, elk, squirrel, and porcupine were also hunted by the Cowichan people on the South Arm.

The proposed Project has the potential to affect hunting and trapping through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred hunting and trapping locations by Cowichan Tribes as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for hunting and trapping by Cowichan Tribes during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to hunting and trapping locations by Cowichan Tribes from instream construction activities, are expected to be negligible. While it is acknowledged that Cowichan Nation Alliance has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations for hunting and trapping by Cowichan Tribes resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with hunting and trapping locations.

Mitigation measures identified in the marine mammal and terrestrial wildlife assessments are expected to be effective at addressing potential effects on the availability of hunting and trapping resources preferred by Cowichan Tribes. Therefore, Project-related effects on hunting and trapping related to potential changes in the availability of resources would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for hunting and trapping by Cowichan Tribes; therefore, Potential Project-related effects on Cowichan Tribes fishing would be expected to be negligible.

Project operation is not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when hunting and trapping are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** to address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while hunting and trapping. At preferred hunting and trapping locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Cowichan Tribes.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Cowichan Tribes is hunting and trapping. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Cowichan Tribes' Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.7 Gathering

Cowichan Nation Alliance report that in the marshy areas south of Canoe Passage near Brunswick Point – in the area of *Xwulits'um*, or place for cutting (cattails) – as well as in the area of *Tl'uqtinus* and across the Fraser River on Tilbury Island, several varieties of cattails and rushes (*stth'equn*) were once harvested. Berries and other plants were gathered and cultivated by the ancestors of the Cowichan Nation Alliance member bands at *Tl'uqtinus*, and were harvested from other locations in the Project area. These plants included wild rose, rose hips, crabapples, elderberries, horsetail, labrador tea, Indian hemp, trembling aspen, mock orange, oregon grape, maple leaves, cranberries, blueberries, blackberries, wapato, bulrushes/reeds (*stth'equn*), as well as seaweed. Tree species available in the vicinity of the Fraser River and traditionally used by the Cowichan Tribes for manufacturing include crabapple, willow, alder, cottonwood, cedar, spruce, aspen, yew, hemlock, and vine maple.

The proposed Project has the potential to affect gathering through changes in access to preferred locations, changes in availability of preferred resources, changes in quality of preferred resources and changes in quality of experience when gathering.

Potential changes in access to preferred gathering locations by Cowichan Tribes as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for gathering by Cowichan Tribes during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to gathering locations by Cowichan Tribes from instream construction activities, are expected to be negligible. While it is acknowledged that Cowichan Nation Alliance, on behalf of its member First Nations, has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations for gathering by Cowichan Tribes resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with gathering locations.

Mitigation measures identified in the vegetation assessment to address Project-related effects on terrestrial vegetation are expected to be effective at addressing potential effects on the availability of resources for the exercise of Aboriginal Interests related to gathering. Therefore, Project-related effects on gathering related to potential changes in the availability of vegetation would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for gathering by Cowichan Tribes; therefore, Potential Project-related effects on gathering related to potential changes in the quality of resources would therefore be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when gathering are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while gathering. At preferred gathering locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Cowichan Tribes.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Cowichan Tribes is gathering. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Cowichan Tribes' Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.8 Archaeology and Cultural Heritage Interests

Locations along the South Arm of the Fraser River of importance to the Cowichan Nation Alliance in the vicinity of the Project include, but are not limited to, *Tl'uqtinus*, spanning the north shore from opposite Deas Island to opposite Tilbury Island, and *Hwlhitsu'm* or *Xwulit'sum*, on Canoe Pass. Both of these areas are considered by Cowichan Nation Alliance member bands as ancestral village and resource sites.

The proposed Project has the potential to affect Cowichan Tribes' Aboriginal Interests related to archaeology and cultural heritage through changes in access to preferred locations and changes in quality of experience.

Potential changes in access to locations related to Cowichan Tribes' archaeological and cultural heritage interests as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations related to Cowichan Tribes' interests related to archaeology and cultural heritage during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to locations related to Cowichan Tribes' archaeological and cultural heritage interests from instream construction activities are expected to be negligible. While it is acknowledged that Cowichan Nation Alliance has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations related to Cowichan Tribes' archaeological and cultural heritage interests resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and not expected to overlap with locations related to Cowichan Tribes' archaeological and cultural heritage interests.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** would also be expected to address the potential Project-related effect to the quality of experience while undertaking activities related to cultural heritage. At locations related to Cowichan Tribes' archaeological and cultural heritage interests that overlap, or are in proximity to, known noise-

sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Cowichan Tribes.

As reported in **Section 6.1 Heritage Resources**, no archaeological or historical sites were identified within the Project area during fieldwork; however, there may be other locations with intangible cultural value or meaning to Cowichan Tribes (e.g., spiritual or storied sites, named places) potentially affected by the Project. In addition, physical alterations to the landscape may affect archaeological or historical sites, and how this landscape is experienced culturally.

As a result, mitigation measures proposed in Part B are not expected to address a potential incremental and permanent Project-related effect tied to Cowichan Tribes' Aboriginal Interests related to archaeology and cultural heritage that may be associated with the introduction of a new prominent feature to the cultural landscape. As this landscape has been previously modified by anthropogenic changes, the potential incremental Project-related effect on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal, but permanently disruptive for Cowichan Tribes, who have identified a historical connection to, and continued or desired use of, sites or places that help define the cultural landscape in the Project area.

Additional mitigation to address this potential incremental effect that is not otherwise addressed in the Application is proposed in **Section 10.1.3.4** and summarized below under Mitigation.

5.0 Mitigation

This section provides a summary of mitigation measures identified to address potential Project-related effects on the exercise of Aboriginal Interests by Cowichan Tribes. For a more detailed discussion, refer to **Section 10.1.3.4 Mitigation**.

Mitigation measures identified for the relevant VCs and ICs in Part B of the Application were reviewed to assess their effectiveness at addressing potential Project-related effects on the exercise of Aboriginal Interests related to those VCs. Examples of mitigation that are proposed in the Application to address potential effects on VCs and ICs, with the potential to result in an effect on Aboriginal Interests, include:

- Avoiding fisheries sensitive timing windows during key Project activities.
- Developing a Marine Access Management Plan to ensure marine use activities, including those supporting Aboriginal Interests, can continue during Project construction.

- Scheduling activities with the potential to generate underwater noise to avoid potential effects on marine mammals.
- Development and implementation of a Terrestrial Vegetation and Wildlife Management Plan with measures to minimize disturbance and loss of vegetation, prevent soil compaction, and minimize clearing in order to minimize effects on vegetation.

These measures are expected to be largely effective at avoiding, reducing, or otherwise managing potential Project-related effects on the exercise of Aboriginal Interests during Project construction and operation.

Recognizing some measurable effects on Cowichan Tribes' Aboriginal Interests could remain following the application of mitigation to address potential effects on the relevant VCs and ICs in Part B, the following additional measures have been identified to address such effects:

- Ongoing consultation with Cowichan Tribes regarding proposed measures, management plans, and monitoring programs related to intermediate components and valued components assessments; and
- Development of a Cultural Heritage Management Plan. Residual Effects

With the implementation of mitigation measures identified in Section 10.1.3.4 and summarized above, residual adverse effects of the proposed Project on the exercise of Aboriginal Interests are expected to be negligible (i.e., not measurable or detectable), and are not further assessed.

6.0 Summary and Conclusion

Part C of the Application builds on consultation undertaken to date to understand Cowichan Tribes' Aboriginal Interests and provides for an assessment of potential Project-related effects of the Project on Aboriginal Interests.

The Ministry began consultations with Cowichan Tribes prior to the submission of the Project Description, which is the end of the Initial Consultation Phase. Both EAO and the Ministry consulted with Cowichan Tribes during the Pre-Application Phase, which concluded with the submission of the Application. The main concerns expressed by Cowichan Tribes during consultations include:

- Potential impacts to Cowichan Tribes title, rights and culture;
- Consideration for future uses should include Cowichan Tribes' plans;
- Aboriginal participation and Project-related opportunities (e.g., potential employment, training, contracting and economic development opportunities);
- Potential effects to air quality, particularly in relation to terrestrial wildlife;

- Effects to fish and fish habitat, and importance of fish and fish habitat including species of cultural and economic importance such as eulachon, sturgeon and salmon;
- Potential effects of pile driving, blasting and underwater noise generated by Tunnel decommissioning and other construction activities;
- Adequacy of EA methodology to address social and cultural effects;
- EA process and associated timelines;
- Strength of claim;
- Social effects of the Project on Cowichan Tribes' ability to transfer knowledge, language and participate in socio-cultural practices;
- Cumulative effects;
- Concerns related to dredging, potential for increased vessel traffic and larger vessels resulting from Tunnel decommissioning;
- Potential effects on Fraser River flow rates after Tunnel removal; and
- Potential effects of run off and drainage.

Based on information provided by Cowichan Tribes, Cowichan Nation Alliance and other publicly-available sources, the Ministry developed a summary of past, present and desired future use of the proposed Project area and its surroundings for the purposes of fishing, hunting/trapping, gathering, archaeology and cultural heritage interests and other related interests. This summary indicates that Cowichan Tribes has, does and intends to continue to use the Fraser River for cultural purposes.

Relying first on the results of the effects assessments for related VCs and ICs in Part B, the assessment of potential effects of Cowichan Tribes' Aboriginal Interests considered four indicators:

1. Access to preferred locations for the exercise of Aboriginal Interests;
2. Availability of preferred resources for the exercise of Aboriginal Interests;
3. Quality of preferred resources for the exercise of Aboriginal Interests; and
4. Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests.

As reviewed in **Section 10.1.3.3** and **Section 10.1.3.4**, the mitigation measures, management plans, and monitoring programs identified in Part B of the Application for ICs or VCs linked to the exercise of Aboriginal Interests are expected to be largely effective at addressing the incremental Project-related effects noted above on the exercise of Aboriginal Interests by Cowichan Tribes, except in the following potentially measurable cases:

- Project construction:
 - Potential temporary direct (minor) effect on quality of experience related to construction-related noise and a potential temporary indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance
- Project operation:
 - Potential permanent direct (minor) effect on quality of experience related to traffic noise and a potential indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance while engaged in those uses
 - Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses.

The following additional measures have been identified to address the above-noted effects:

- Ongoing consultation with Cowichan Tribes regarding proposed measures, management plans, and monitoring programs related to VC and IC assessments; and
- Development of a Cultural Heritage Management Plan.

With the implementation of mitigation proposed to address potential effects on VCs and ICs, as well as additional mitigation proposed to address potential residual effects on Aboriginal Interests, no effects on the exercise of Aboriginal Interests by Cowichan Tribes, as a result of the Project, are expected.

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. Environmental Assessment Act (B.C. EAA), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. EAA sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. EAA, and that it requires an EAC.

The Project as proposed is not subject to review under the Canadian Environmental Assessment Act, 2012, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the Environmental Assessment Act.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------------|-------------------------|
| Social and cultural effects and the adequacy of EA methodology | <p>Concerns related to the adequacy of Environmental Assessment are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Social and cultural effects of the project are considered in Part C of the Environmental Assessment Application (Application). Where Aboriginal Groups values and perspectives have been provided to the Proponent regarding environmental, economic, social, heritage or health valued components (VCs), they have been incorporated, where applicable into the Part B assessment of those VCs.</p> | Referred to EAO | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|--------------------------------|
| Strength of Claim assessment and related depth of consultation. | Concerns related to the strength of claim assessment have been referred to EAO and MARR. | Referred to EAO and MARR | None |
| Project's EA Process and its associated timelines. | Concerns relating to the EA process and its associated timelines were referred to EAO. EAO issued a memo to members of the Working Group on March 18, 2016 in response to questions and concerns related to the EA process and its associated timelines. The Ministry understands that EAO responded to Cowichan Tribes' queries regarding the EA Process and associated timelines. | Referred to EAO | None |
| Effectiveness and nature of the EA process as well as current volume of EAs underway | Concerns relating to the broad concern related to the effectiveness and nature of the Environmental Assessment Process have been referred to EAO. While the Ministry is unable to address the concern related to the current volume of EA's underway, the Ministry has and will continue to work with Cowichan Tribes to support their participation in this particular Project's review process and to plan for consultation activities in a manner that is mindful of the current volume of referrals that Cowichan Tribes is working on. Support to date has included Pre-Application capacity funding. | Referred to EAO | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------|--------------------------------------|
| Lack of resources and funding for First Nations communities. | The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. | Addressed | Funding for Application Review Phase |

ABORIGINAL INTERESTS

There are potential Project related impacts to Cowichan Tribes title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape

Quality of experience while engaged in or tied to traditional use

- cultural landscape

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

Quality of experience while engaged in or tied to traditional use

- changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
 - Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Cowichan Tribes as a result of the Project are not expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Potential impacts to Cowichan Tribes title, Rights and culture. Identification of future developments should include potential Cowichan Tribes title and rights resulting from treaty negotiations or proof of title.</p> | <p>Potential Project related impacts to Cowichan Tribes title, Rights and culture, the level of effect predicted, and mitigation measures are outlined the Application. The Ministry will continue to consult with Cowichan Tribes to ensure any effects are minimized.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application</p> |
| <p>Identification of “other requirements that are relevant to the Project, including international agreements or other agreements” should be included in the Crown’s Constitutional obligations to First Nations“</p> | <p>The Crown’s constitutional obligations are fundamental to consultation with Cowichan Tribes and the EA process. The obligations within the context of the EA are addressed in Part C of the Application.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation</p> |
| <p>“Consideration for future uses should include Cowichan Nation Alliance’s plans to re-establish a site on λəqtinəs/Tl’uqtinus site for residential and/or commercial purposes.”</p> | <p>Noted</p> | <p>Noted</p> | <p>Ongoing consultation</p> |

|---|--|---------------------------------|---|
| <p>Cowichan Tribes access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel.</p> | <p>Cowichan Tribes' access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A measurable direct effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation measures outlined in Section 5.2.4</p> |
| <p>Social effects of the Project such as Cowichan Tribes' knowledge transmission, language loss, dependency and social interaction.</p> | <p>Social effects of the Project on Cowichan Tribes ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation measures outlined in all sections of the Application</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| | <p>predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3 and Section 10.3 of the Application.</p> | | |
| <p>Protection of Cowichan Tribes' rights to harvest within the Project area.</p> | <p>Cowichan Tribes' rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures outlined in Table 10.3-1 and Section 10.1.3.4, residual effects on the exercise of Aboriginal Interests by Cowichan Tribes as a result of the Project are not expected.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and Implementation of measures outlined in Section 10.1.3.4</p> |
| <p>Assessment of cumulative effects in regards to the inclusion of other reasonably foreseeable projects and activities.</p> | <p>The Ministry's cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed.</p> | <p>Addressed</p> | <p>None</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|-------------------------|
| Concern that the overlapping construction period of GMT and Pattullo projects needs to be considered in the assessment. | Rehabilitation of the Pattullo Bridge will be completed by October 2016. The replacement of the Pattullo bridge is in planning stages and a construction period has yet to be established. | Addressed | None |
| Consideration of cumulative effects on aboriginal rights, including measurement against a pre-industrial baseline | The Application will include historical context as outlined relating to changes in use over time by Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by First Nations or was otherwise available from publicly available sources. However, there is no EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests. | Addressed | None |
| Absence of a comprehensive study of cumulative effects on the Fraser River | While the Ministry acknowledges that Cowichan Tribes is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|-------------------------|
| Length of time tolls are in place | <p>The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |
| Revenue sharing opportunities from tolling | <p>Revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |

| ABORIGINAL CONSULTATION | | | |
|---|---|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.</p> <p>Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process | Cowichan Tribes received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Cowichan Tribes as it relates to confidentiality and dissemination | The Ministry understands and respects that certain information shared by Cowichan Tribes may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Cowichan Tribes requests to keep information confidential. | Addressed | Appropriate use of confidential information |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

| Appropriate use of information shared by Cowichan Tribes as it relates to confidentiality and dissemination | The Ministry understands and respects that certain information shared by Cowichan Tribes may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Cowichan Tribes requests to keep information confidential. | Addressed | Appropriate use of confidential information |
| Funding for Traditional Use Study | The Ministry signed a funding agreement with Cowichan Tribes which provided funding for a Traditional Use Study. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project's Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests

Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes

Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns

Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes

Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects

Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.

Incorporate community and traditional knowledge in Project components

Document and report to EAO on the Ministry's Aboriginal consultation program at times specified by EAO.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|--|
| <p>Opportunities for cultural recognition and naming</p> | <p>The Ministry is exploring opportunities for cultural recognition and naming and will to work with Cowichan Tribes on this matter.</p> | <p>Ongoing</p> | <p>Further engagement with Cowichan Tribes is planned to explore opportunities related to cultural recognition and naming, art and interpretive signage</p> |
| <p>Project-related employment, training, contracting, and economic development opportunities. Equity and revenue sharing for Cowichan Tribes and importance of initiating related discussions with Cowichan Tribes during Pre-Application Stage. Aboriginal procurement policy.</p> | <p>The Ministry is committed to working with Cowichan Tribes to identify potential opportunities to benefit from the Project. The Ministry acknowledges that Cowichan Tribes wants to prepare its membership for employment opportunities and will work with Cowichan Tribes to identify ways to support community preparedness.</p> | <p>Ongoing</p> | <p>The Ministry will share information including identification of potential employment, training, contracting and economic development opportunities as it becomes available to support community preparedness. The Ministry welcomes input from Cowichan Tribes on the type of information that would be useful.</p> |
| <p>Interest in land recovery at Green Slough</p> | <p>As part of the Project, agricultural land will be protected as much as practical. Once the project is completed, there will be a determination of surplus lands, if any, and disposition will follow the appropriate process including consultation.</p> | <p>Addressed</p> | <p>Determination of surplus lands and consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

| Adequate training time to take full advantage of potential future Project work activities | The Ministry is committed to working with Cowichan Tribes to identify potential opportunities to benefit from the Project. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Cowichan Tribes to identify ways to support community preparedness. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful. |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Development of a mitigation plan to ensure protection to the Lulu-island-Delta water main.

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Change in flow rates after Tunnel removal | The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments | Addressed in Application | Implementation of mitigation measures outlined in Section 4.1.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|--|
| | <p>anticipated during Tunnel removal is expected to be relatively minor. River Hydraulics and River Morphology are addressed in Section 4.1.</p> | | |
| <p>Factoring in extreme weather events in River Hydraulics model</p> | <p>Extreme weather events are considered and planned for. River Hydraulics and River Morphology are addressed in Section 4.1.4.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4</p> |
| <p>Potential for contaminants in the tunnel and how this may affect tunnel decommissioning.</p> | <p>The Ministry will consult with Fisheries and Oceans Canada and Port Metro Vancouver regarding Tunnel decommissioning, and will incorporate the requirements of these agencies in the planning and implementation of decommissioning activities.</p> <p>If potentially hazardous building materials are identified in the Tunnel, a detailed plan for removing and appropriately disposing of such material will be developed prior to initiating decommissioning activities. Any potentially hazardous material identified will be managed in accordance with applicable legislation, including the B.C. Hazardous Waste Regulation, B.C. Reg. 63/88, and the Workers' Compensation Board of B.C. Occupational Health and Safety Regulation, B.C. Reg. 296/97.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.1.4 and 4.2.4</p> |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Project activities undertaken in the upland ditch systems will follow Standards and Best Practices for Instream Works.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|--|
| <p>Potential effects of run off and drainage</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.2.4</p> |
| <p>Effect of the Tunnel on dissolved oxygen content within the river.</p> | <p>The Ministry is following up with Cowichan Tribes to obtain further clarification regarding their concern regarding the effect of the Tunnel on dissolved oxygen content within the river.</p> | <p>Ongoing</p> | <p>Clarification regarding concern</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Impact of potential pollutants and contaminants within the tunnel walls on the river if left in place. | The tunnel decommissioning is anticipated to involve the removal of the four in-river sections of the Tunnel. | Addressed | None |
| Improved ditches will result in less filtering of deleterious materials | Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Sediment and Water Quality is addressed in Section 4.2 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 |
| Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River. | Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application. | Addressed in Application | None |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term potential of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|--|
| <p>Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon</p> | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to Cowichan Tribes. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.4.4</p> |
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.3.4 and 4.4.4</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.
 Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan
 Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Cowichan Tribes has not voiced any specific issues or concerns with respect to Marine Mammals. | | | |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail marsh that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management plan will included in the Construction Environmental Management Plan

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|---|
| Invasive plant species and proposed plans to manage presence during construction | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 |
| Culturally significant plants should be used in planting plans | Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans. | Addressed | The Ministry will develop planting plans with consultation from Aboriginal Groups |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Potential light and noise effects on wildlife and fish.</p> | <p>The Ministry understands that Cowichan Tribes is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
| <p>Potential effects of the bridge structure on species such as waterfowl and migratory birds.</p> | <p>The Ministry understands that Cowichan Tribes is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--------|---------------------------|--------|-------------------------|
|--------|---------------------------|--------|-------------------------|

| | | | |
|--|---|---------------------------------|--|
| <p>Potential effects to air quality, particularly as it relates to terrestrial wildlife.</p> | <p>The Ministry understands that Cowichan Tribes is concerned with the potential effects of air quality, particularly on terrestrial wildlife species. Projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
|--|---|---------------------------------|--|

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry's 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Noise monitoring program.

Site specific schedules and activities.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Increase in traffic and consequent increase in associated noise and vibration due to the increases capacity of the new bridge.</p> | <p>The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new Bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment, after mitigation, are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the Highway but do not exceed what is acceptable for residential, educational or institutional facilities. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |
| <p>Choice of building materials in relation to noise and vibration</p> | <p>The Ministry confirms that appropriate building materials will be used to mitigate noise and vibration. Mitigation in accordance with the Ministry’s 2014 Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways will be implemented, as warranted, at select locations to avoid or minimize potential Project-related increase in post-construction noise levels. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

During construction, a measureable effect on access to instream locations for traditional use has been determined.

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Potential effects of construction during fishing season on fishing activities. Impacts of Tunnel decommissioning on Aboriginal fisheries, specifically as it relates to timing.</p> <p>“The proposed project has a direct impact on how we are able to use and navigate the areas surrounding the proposed project, and the impact of the project as it limits this ability needs to be considered in the Aboriginal Interests Assessment.”</p> <p>“Future exercise of our Aboriginal rights to fish (and also to harvest) including in-water and upland of the South arm of the Fraser should be considered when assessing project impacts of our interests.”</p> | <p>Potential interference with Cowichan Tribes fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |
| <p>Facilitation of increased shipping in the river</p> | <p>The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river.</p> | <p>Addressed</p> | <p>None</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewscales.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Residual & Cumulative Effects

There is a low, short-term probability of disturbance to residential, commercial and industrial land use during construction.

There is a moderate , short-term probability of disturbance to recreational users near the new bridge during construction

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Cowichan Tribes has not voiced any specific issues or concerns with respect to Land Use | | | |

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a chance find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites and specific concern for any effects on the ʔəqtinəs/Tl'uqtinus site and potential archaeological values at interchanges</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Cowichan Tribes. All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment. Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|--|
| Participation in archaeological fieldwork and review of archaeological draft reports | Cowichan Tribes participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports. | Addressed | Cowichan Tribes will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports. |
| Ethnographical content in reports does not accurately reflect Cowichan Tribes historical presence within the Project area | The Ministry noted Cowichan Tribes concern that ethnographical content in Project reports does not accurately reflect Cowichan Tribes historical presence within the Project area. The Ministry continues to work with Cowichan Tribes to address this concern. | Ongoing | Ongoing consultation |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

A negligible effect on access to instream locations for traditional use has been determined.

7.0 HUMAN HEALTH

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.
 A negligible effect on access to upland locations for traditional use has been determined.
 A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation
 Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.
 Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

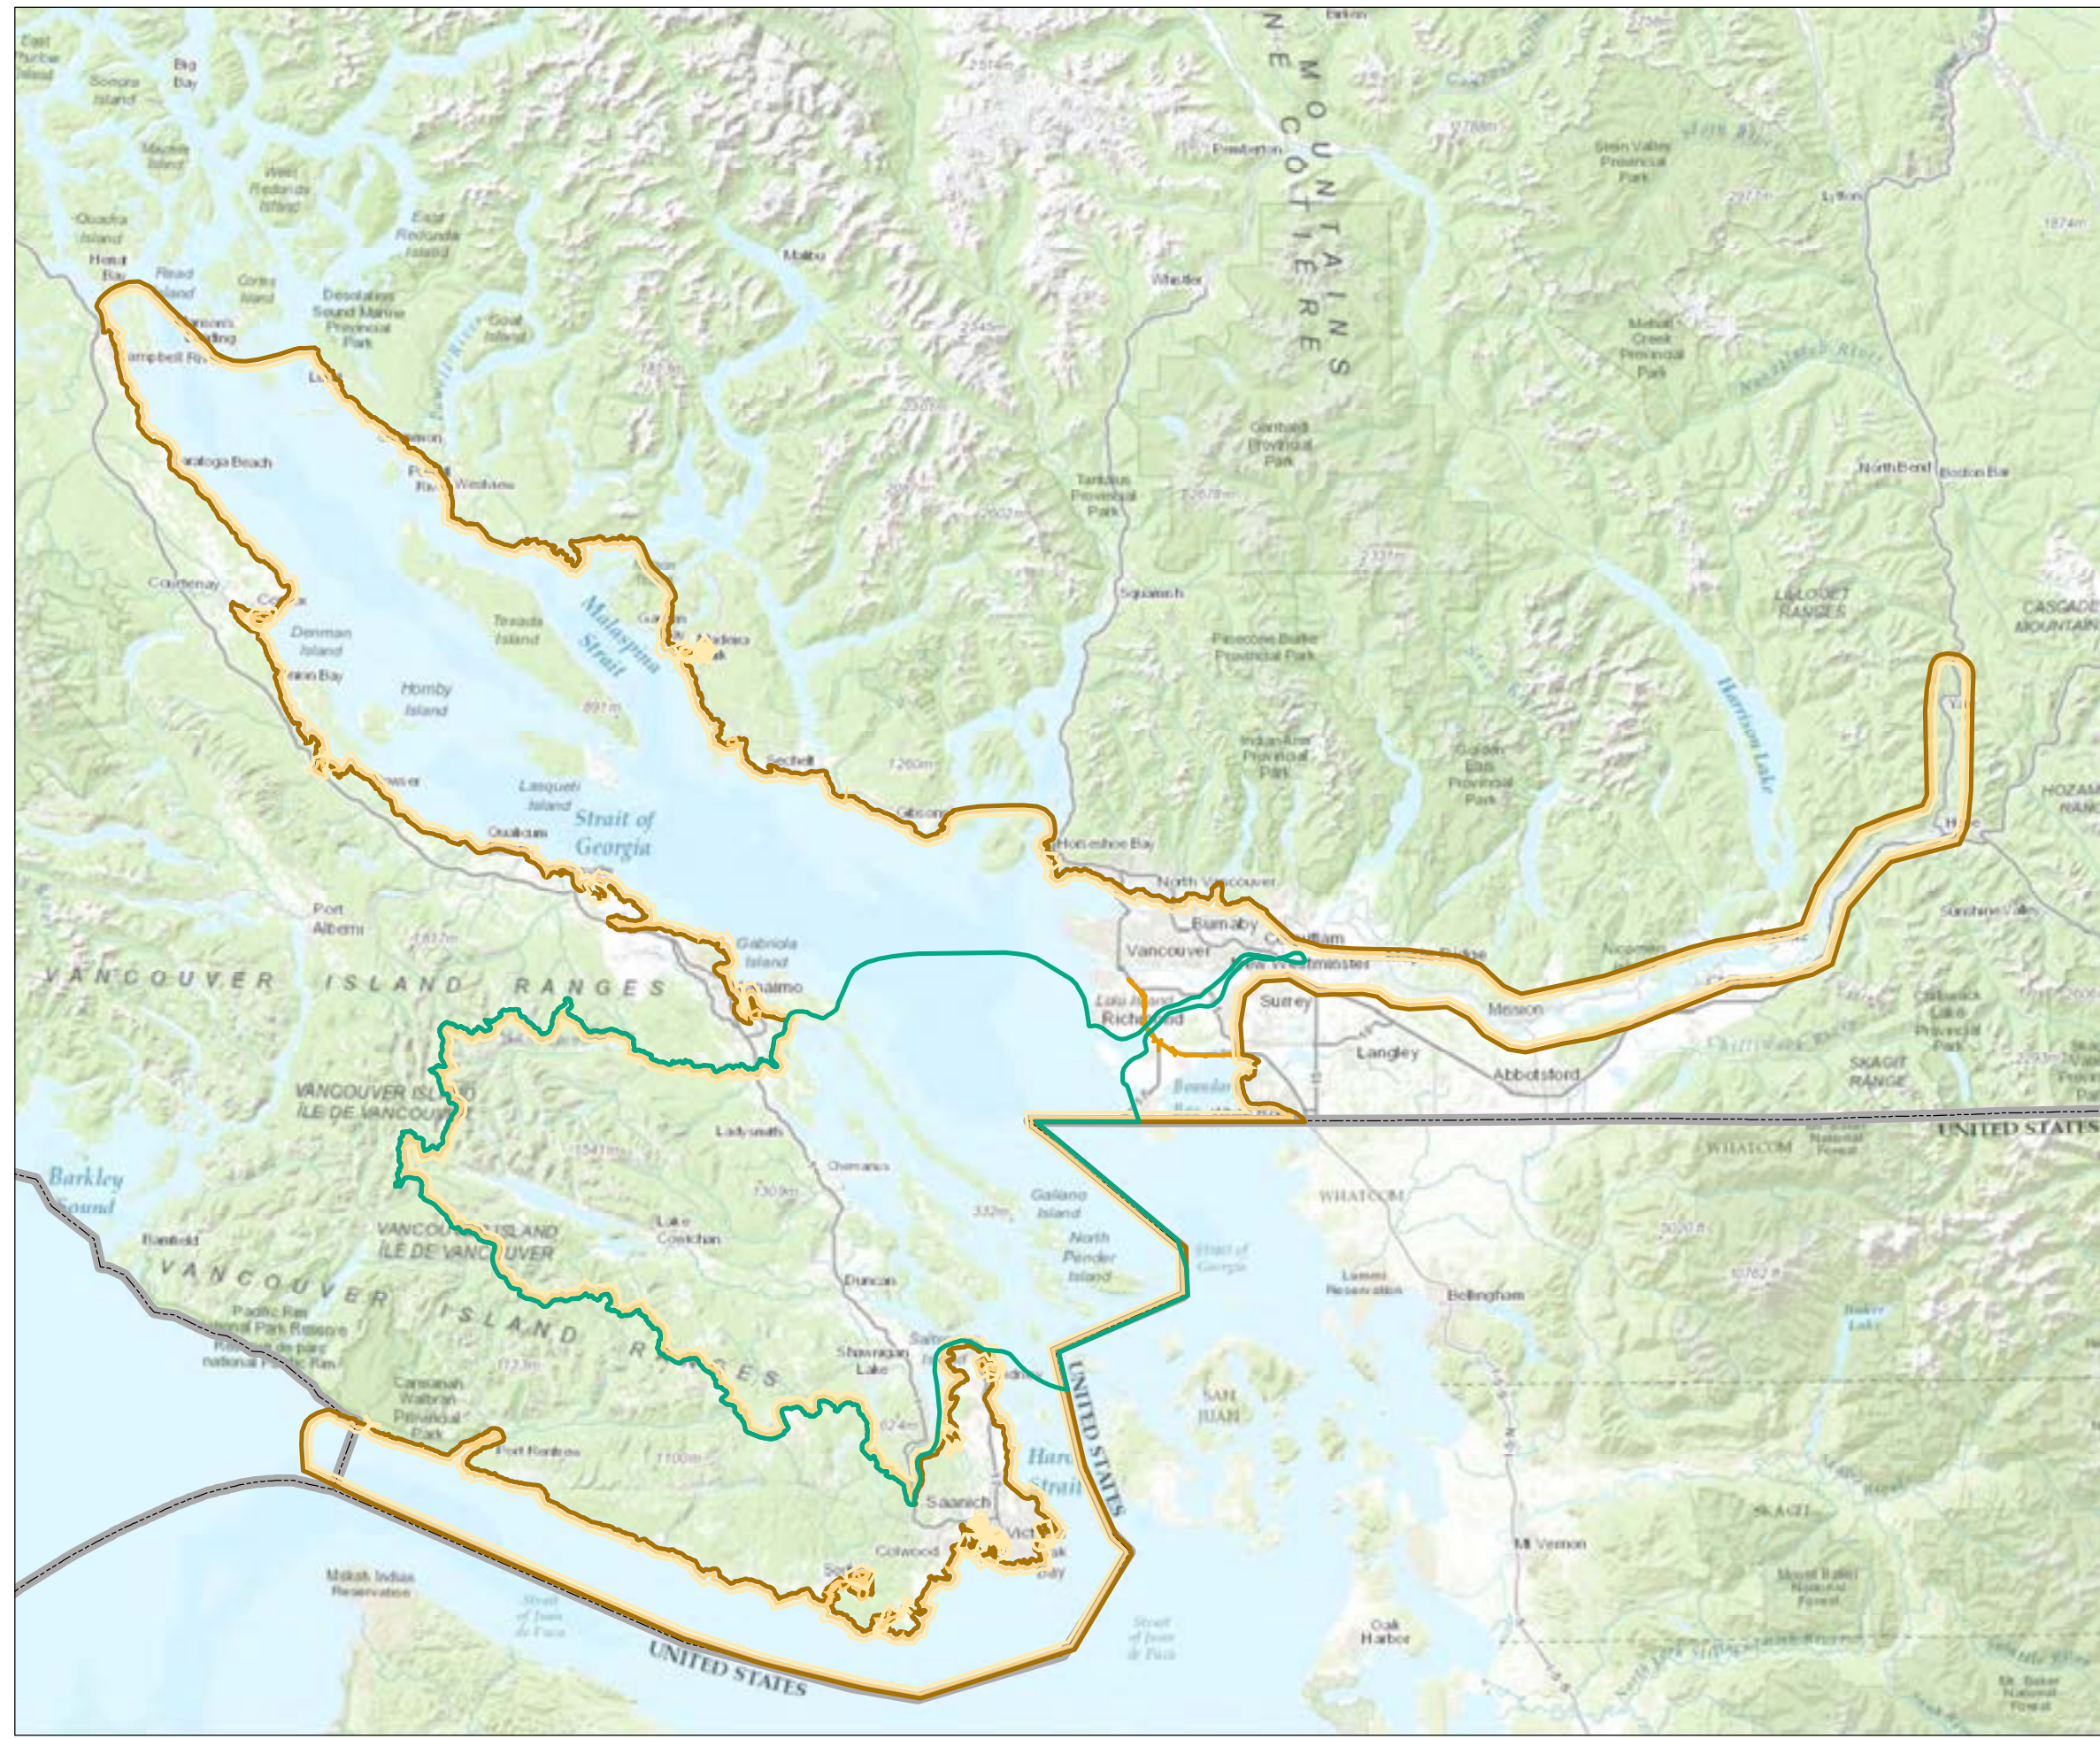

Residual & Cumulative Effects
 No significant Project-related residual or cumulative effects on human health are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---|-------------------------|
| Aboriginal health is not currently being considered in the assessment | Aboriginal health was considered in the assessment of potential Project-related effects on human health, including community and social factors. Human Health is addressed in Section 7.1 of the Application. | Addressed in Assessment and Application | None |
| Current conditions along the foreshore and in the Fraser River are not properly understood and have not been considered in the Human Health Assessment | Current conditions along the foreshore were considered in the assessment of potential Project-related effects on human health, including community and social factors. Human Health is addressed in Section 7.1 of the Application. | Addressed in Assessment and Application | None |

| 8.0 ACCIDENTS AND MALFUNCTIONS | | | |
|---|--|--------------------------|--|
| <p>Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.</p> <p>In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | As outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan), an Emergency Response and Spill Contingency Plan will be developed. The Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills. | Addressed in Application | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |
| Contaminants from automobile emission currently captured in Tunnel. New Bridge will send emissions directly into the air and Fraser River and settle on the foreshore | Automobile emissions are currently released from the Tunnel through a series of vents. Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|-------------------------|
| | <p>construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | | |
| <p>New Bridge could “unleash pent-up demand” and create even more congestion</p> | <p>The Project has been designed to address issues related to current and future traffic safety, congestion and reliability, and to help achieve regional mode share targets by facilitating travel across the Fraser River by transit, HOVs, cycling and walking. During operations, the Project will provide travel time savings for commuters or 25-35 minutes per day, improve safety with a forecast 35 percent reduction in collisions, and support provincial and regional strategies to encourage mode shift to transit and carpooling. As proposed, Project-related improvements, including tolling, will moderate traffic growth while effectively serving forecast demand at the crossing.</p> | <p>Addressed</p> | <p>None</p> |

APPENDIX D

Halalt First Nation

1.0 Introduction

Halalt First Nation engaged directly with the Ministry on the Project and also collectively with Cowichan Tribes, Penelakut Tribe and Stz'uminus First Nation as member nations of the Cowichan Nation Alliance. The Ministry provided information and funding directly to Halalt First Nation. However, Cowichan Nation Alliance provided feedback and participated in meetings and fieldwork. Unless noted otherwise, Cowichan Tribe represented Cowichan Nation Alliance in correspondence, meetings and fieldwork. This overview provides information on consultation with Halalt First Nation specifically, and with Cowichan Nation Alliance as applicable to Halalt First Nation.

This appendix provides a summary of the information presented in Part C Aboriginal Consultation (Part C) of the Application for an Environmental Assessment Certificate (the Application) regarding the assessment of effects on Aboriginal Interests. Aboriginal Interests are defined as asserted or determined Aboriginal rights, including title, or treaty rights. This appendix presents the information specific to Halalt.

The organization of the information presented generally follows Part C and includes the following sections:

- Consultation;
- Community Profile;
- Existing Conditions;
- Potential Effects;
- Mitigation;
- Residual Effects; and
- Summary and Conclusion.

For more detailed information on the effects assessment on Aboriginal Interests related to Halalt, refer to the following sections of Part C:

- Consultation with Halalt (**Section 10.1.2.10**);
- Halalt community profiles (**Section 10.1.1.2**);
- Description of existing Halalt Aboriginal Interests (**Section 10.1.3.2**);
- Assessment of potential effects of the Project on the exercise of Halalt Aboriginal Interests (**Section 10.1.3.3**);
- Mitigation relating to potential effects on Aboriginal Interests (**Section 10.1.3.4**); and
- Residual effects on Halalt Aboriginal Interests following application mitigation (**Section 10.1.3.5**).

A summary of the Aboriginal Interests Assessment for Halalt is also provided in **Section 10.1.3.8**.

The summary presented in this appendix also incorporated information found in the Halalt Overview Table (**Appendix D2**), which provides detailed information regarding:

- Halalt issues and concerns identified to date;
- Identification of effects on VCs and ICs that relate to the assessment of effects on Halalt's Aboriginal Interests;
- The Ministry's response to specific issues and concerns raised by Halalt;
- The status of these issues and concerns; and
- Next steps required to address outstanding issues and concerns.

2.0 Consultation

This section provides information regarding the consultation activities that the EAO and Ministry carried out prior to submission of the Application.

2.1 EAO-led Consultation Activities

2.1.1 Capacity Funding

When a provincial agency is a proponent of a project going through a provincial EA under the British Columbia *Environmental Assessment Act (BCEAA)*, that agency provides funding to Aboriginal Groups to support their involvement in pre-Application and Application review phases in place of EAO providing such funding. The Ministry's provision of capacity funding is discussed in the following section, Proponent-led Consultation Activities.

2.1.2 Participation in Working Group

EAO invited Halalt and all other Aboriginal groups identified in Schedule B of the Section 11 Order to participate as members of a Working Group.

During the Pre-Application stage, EAO held two Working Group meetings where the Ministry presented information on the Project and the environmental assessment process and received and responded to comments on those presentations. Halalt First Nation represented Cowichan Nation Alliance at the first meeting. Halalt First Nation and Cowichan Tribes represented Cowichan Nation Alliance at the second meeting.

The first Working Group meeting, held January 2016, focused on the environmental assessment process, Project overview and update, Key Areas of Study, draft Application Information Requirements overview, and preliminary conclusions from study results.

The second working group meeting, held March 2016, focused on the environmental assessment process, list of materials available on the Project website, review of comments received on, and resulting changes to, the draft Application Information Requirements, and a description and rationale of the assessment areas. Working Group comments raised by Cowichan Nation Alliance in relation to the draft Application Information Requirements resulted in Aboriginal groups being invited to participate in river-otter related fieldwork in April 2016. The objectives of this work were to document river otter presence or potential presence within the Regional Assessment Area, document and describe use of riparian and high use areas and identify potential Project-related effects.

Cowichan Nation Alliance participated in the completeness review of the Application for an Environmental Assessment Certificate (Application) that considered whether the Application included information requirements set out in the Application Information Requirements.

It is anticipated that Halalt will continue as an active member of the Working Group through the environmental assessment process.

2.2 Proponent-led Consultation Activities

The Ministry began consultation with Halalt in early 2014 in order to identify the nature and scope of Halalt's Aboriginal Interests and how they might be impacted by the Project. Following is a summary of consultation activities led by the Ministry with Halalt. A more detailed discussion is provided under the Halalt section in **Section 10.1.2.10 Overview of consultation with each Schedule B Aboriginal Group**. The following sections represent the main activities undertaken in support of Proponent-led consultation and include the following:

- Provision of capacity funding;
- Traditional use, traditional knowledge and other studies;
- Examples of Consultation Activities; and
- Concerns Identified to Date.

2.2.1 Capacity Funding

The Ministry entered into a Participation Funding Agreement, including the Initial Consultation and Pre-Application phases for consultation, with Halalt. The Ministry has been working with Halalt regarding their needs for capacity funding to facilitate their participation in the Application Review Phase. Consultation activities that are anticipated to be undertaken during the Application Review phase that will be supported by capacity funding include participation in technical reviews and analyses, involvement in ongoing consultation activities, and presentation of key information regarding their respective Aboriginal Interests.

2.2.2 Traditional Use, Traditional Knowledge & Other Studies

- The Ministry provided additional funding to Halalt for the preparation and submission of Traditional Use, Traditional Knowledge or other studies. Halalt worked with other Cowichan Nation Alliance members and submitted the following traditional use studies: *Cowichan Nation Traditional, Current, and Planned Future Use of the George Massey Tunnel Replacement Bridge Project Area, prepared by Candace Charlie for Cowichan Tribes, on behalf of the Cowichan Nation Alliance, August 9, 2015*
- *George Massey Tunnel Replacement Project: Cowichan Occupation and Use of the Project Lands, prepared by Dorothy Kennedy for David Robbins of Woodward and Co., Counsel for the Cowichan Tribes, on behalf of the Cowichan Tribes, August 25, 2015*

Cowichan Nation Alliance also provided to the Ministry: *Historical Geography of Cowichan Land Use and Occupancy Lower Fraser River: Map Series and Report, prepared for Woodward and Company and the Cowichan Tribes by Kenneth G. Brealey, May 31, 2010.*

The purpose of such studies is to identify Aboriginal input and traditional knowledge for inclusion and consideration in the EA. In addition, studies were funded to enhance the Ministry's understanding of Aboriginal Interests and Aboriginal Group's past, present and desired future use as it pertains to the exercise of Aboriginal Interests within the Project area and the potential adverse effects on identified Aboriginal Interests.

2.2.3 Examples of Consultation Activities

A number of consultation activities were undertaken with Halalt during both the Initial Consultation Phase and the Pre-Application Consultation Phase as follows:

Initial Consultation Phase Activities - The Ministry recognized the importance and value of early engagement with Schedule B Aboriginal Groups and undertook an Initial Consultation Phase prior to the Pre-Application Phase. The Initial Consultation Phase concluded in December 16, 2015 with submission of the Project Description and Key Areas of Study document. The focus of

the Initial Consultation Phase was collection of baseline information and sharing of draft EA-related documents (i.e. Project Description and Key Areas of Study, Application Information Requirements (AIR)). The main consultation activities the Ministry undertook with Halalt included:

- Sharing of Project-related information including focused presentation on topics on interest and/or concern to Halalt;
- Funding for Halalt's participation in Project consultation activities and EA process;
- Halalt participation in field studies;
- Site visit;
- Review of draft EA documents such as the Project Description and Key Areas of Study, Heritage Resources Overview Assessment/Archaeological Overview Assessment, AIR, Heritage Resources Assessment and Aboriginal Consultation Plan;
- Meetings with Halalt Chief and Council, staff, consultants, and elders; and
- Response and follow up with Halalt regarding the identification and resolution of issues.

Pre-Application Consultation Phase Activities - The Pre-Application Consultation Phase began with the filing of the Project Description and Key Areas of Study document on December 16, 2015 and concluded with the submission of the Application. This phase included the issuance of the Section 11 Order, AIR development and collection of baseline information (may include submission of permit applications). The main consultation activities the Ministry undertook with Halalt included:

- Sharing of Project-related information including focused presentation on topics on interest and/or concern to Halalt;
- Funding for Halalt's participation in Project consultation activities and EA process;
- Meetings with Halalt Chief and Council, staff, consultants, elders and membership and Cowichan Nation Alliance;
- Halalt participation in fieldwork;
- Halalt participation in the EA Working Group;
- Review of draft EA documents such as the Application Information Requirements, Aboriginal Consultation Plan, and Aboriginal Consultation Reports; and
- Response and follow up with Halalt regarding the identification and resolution of issues.

2.2.4 Concerns Identified to Date

As outlined above, Halalt’s concerns, identified through consultation undertaken to-date, are presented in **Appendix D2 Halalt First Nation Overview Table**. The Ministry’s response to Halalt’s key concerns regarding potential impacts on Halalt’s Aboriginal Interests are outlined below:

Table 1 Concerns Identified to Date

| Concerns Identified to Date | Response |
|--|--|
| <p>Potential impacts to Cowichan Nation Alliance title, Rights and culture.</p> | <p>Potential Project related impacts to Cowichan Nation Alliance title, Rights and culture, the level of effect predicted, and mitigation measures are outlined the Application. The Ministry will continue to consult with Cowichan Nation Alliance to ensure any effects are minimized.</p> |
| <p>Aboriginal participation and Project-related opportunities</p> <ul style="list-style-type: none"> • Potential employment, training, contracting and economic development opportunities • Community preparedness • Cultural recognition and naming • Revenue sharing opportunities from tolling • Re-establishment of a site on ʔəqtinəs/Tl’uqtinus site for residential and/or commercial purposes • Surplus land | <p>The Ministry is committed to working with Cowichan Nation Alliance to identify potential employment, training, contracting and economic development opportunities and to identify ways to support community preparedness.</p> <p>The Ministry is exploring opportunities for cultural recognition and naming and will work with Cowichan Nation Alliance on these opportunities.</p> <p>The provincial tolling strategy stipulates that revenue from tolling may only be used to defray the costs of designing, constructing, operating and maintaining highways.</p> <p>The Ministry notes Cowichan Nation Alliance’s wish to re-establish a site on ʔəqtinəs/Tl’uqtinus site for residential and/or commercial purposes.</p> <p>As part of the Project, agricultural land will be protected as much as practical. Once the project is completed, there will be a determination of surplus lands, if any, and disposition will follow the appropriate process including consultation</p> |

| Concerns Identified to Date | Response |
|---|--|
| <p>Effects to fish and fish habitat</p> <ul style="list-style-type: none"> • Importance of fish and fish habitat including species of cultural and economic importance such as eulachon, sturgeon and salmon • Potential effects of pile driving, blasting and underwater noise generated by Tunnel decommissioning and other construction activities | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon, salmon to Halalt and is committed to avoiding or mitigating any potential effects.</p> <p>The Ministry designed a clear span bridge over the Fraser River South Arm and Deas Slough to avoid or minimize Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat..</p> <p>As outlined in Section 4.3 (Underwater Noise), sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources will be effectively mitigated by scheduling activities during period of low tide, when work can be completed under shallow water conditions or in the dry.</p> |
| <p>Environmental Assessment (EA):</p> <ul style="list-style-type: none"> • Adequacy of methodology to address social and cultural effects • Process and associated timelines • Strength of Claim Assessment | <p>The Ministry acknowledges the importance of Halalt’s involvement in the environmental assessment process and is committed to funding Halalt’s participation in the Initiation Consultation and Application Review phases.</p> <p>Cowichan Nation Alliance’s concerns related to Environmental Assessment including the adequacy of methodology to address social and cultural effects, process and associated timelines are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Concerns relating to the Strength of claim Assessment have been referred to EAO and MARR.</p> |

| Concerns Identified to Date | Response |
|---|---|
| <p>Social effects of the Project on Cowichan Nation Alliance’s ability to transfer knowledge, language and participate in socio-cultural practices</p> | <p>Social effects of the Project on Cowichan Nation Alliance’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3 and Section 10.3 of Part C of the Application.</p> |
| <p>Cumulative effects:</p> <ul style="list-style-type: none"> • Consideration of cumulative effects on Aboriginal rights • Absence of comprehensive study on cumulative effects on the Fraser River | <p>The Application includes historical context relating to changes in use over time by Cowichan Nation Alliance and other Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by Cowichan Nation Alliance or was otherwise available from publicly available sources. However, there is no EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests. While the Ministry acknowledges that Cowichan Nation Alliance is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project.</p> |

| Concerns Identified to Date | Response |
|--|--|
| <p>Concerns related to dredging, potential for increased vessel traffic and larger vessels resulting from Tunnel decommissioning</p> | <p>Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project, including the decommissioning of the Tunnel, will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> |
| <p>Potential effects on Fraser River flow rates after Tunnel removal</p> | <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Flow rates are discussed in Section 4.1 (River Hydraulics).</p> |
| <p>Potential effects of run off and drainage</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> |

3.0 Community Profile: Halalt First Nation

Halalt First Nation is governed by a chief and council with a two-year term under an *Indian Act* electoral system. Halalt has a three-member council, with the current term expiring in April 2017.

While the First Nations affiliated with the Cowichan Nation Alliance have explained that they traditionally resided on both sides of the Strait of Georgia as part of a seasonal round, Halalt's main present-day community is located in Chemainus on southeast Vancouver Island. Of 212 registered members, 84 live on reserve. The Project area does not overlap any of Halalt's current or former reserve lands.

Halalt is, or has been, affiliated with the Hul'qumi'num Treaty Group, along with the other three Cowichan Nation Alliance members, Lake Cowichan First Nation and Lyackson First Nation. These First Nations have been described as speakers of the "Island" dialect of Halkomelem (*Hul'qumi'num*), and have referred to themselves collectively as *Hul'qumi'num Mustimuhw*.

The Hul'qumi'num Treaty Group member bands collectively assert a core territory or "title lands" and a wider marine or fishing territory, as described in its Statement of Intent to the British Columbia Treaty Commission. Core areas over which title is asserted include but are not limited to "the south arm of the Fraser River, including Canoe Pass, up to and including Douglas Island, with lands on the north shore of the south arm up to Sapperton Channel (New Westminster), the islands in the south arm of the Fraser River and the south bank of the Fraser River along Canoe Pass up to Deas Island". This area is subsumed within the broader marine or fishing territory. The core territory of the Hul'qumi'num Treaty Group overlaps the Project area at the Tunnel crossing.

Halalt, along with each of the other Cowichan Nation Alliance member First Nations, has a Forest Consultation and Revenue Sharing Agreement with the Province of British Columbia. The territorial maps attached to these agreements typically include areas on the western side of the Strait of Georgia only.

Locations along the South Arm of the Fraser River of importance to Halalt, along with the Cowichan Nation Alliance member First Nations, in the vicinity of the Project include but are not limited to *Tl'uqtinus*, spanning the north shore from opposite Deas Island to opposite Tilbury Island (CNA 2016), and *Hwlhits'um* or *Xwulit'sum*, on Canoe Pass. Both of these areas are considered by Cowichan Nation Alliance member bands as ancestral village and resource sites. A member First Nation of the organization has previously reported that the Cowichan Nation Alliance is working to re-establish a permanent land base at *Tl'uqtinus* for residential and/or commercial purposes. Cowichan Nation Alliance's *Tl'uqtinus* claim area is shown in **Section 10.1.3.2 Existing Conditions**.

3.1 Halalt First Nation: Existing Conditions

This section provides a high level of summary of past, present, and desired future use of the proposed Project area and surroundings for traditional purposes that are or may be connected with the exercise of Halalt's Aboriginal Interests. A more detailed discussion, including sources used, is provided under Halalt in **Section 10.1.3.2 Existing Conditions**. In this summary, specific information on Halalt's traditional use has been supplemented with general information on traditional use by Cowichan Nation Alliance and Hul'qumi'num Treaty Group Nation Alliance member First Nations.

3.1.1 General

- Halalt has Aboriginal Interests that are known to overlap or lie in the vicinity of the Project corridor, which includes a portion of the South Arm of the Fraser River.
- Halalt followed a seasonal round of resource use and regional settlement that took them from their winter residences on Vancouver Island and the Gulf Islands across the Strait of Georgia to the Fraser River estuary, where they resided for all or part of the annual salmon runs (April to through October), or, in some instances, year-round. The seasonal round is described in Part C.
- Halalt has identified past and ongoing effects that have altered and reduced use over time, constraining the current exercise of their Aboriginal Interests.
- A member First Nation of the organization has previously reported that the Cowichan Nation Alliance is working to re-establish a permanent land base at *Tl'uqtinus* for residential and/or commercial purposes.

3.1.2 Fishing

- Halalt harvested the following species harvested historically on the South Arm of the Fraser River: sockeye and pink salmon, sturgeon, shellfish, and marine mammals. Cowichan Nation Alliance has previously reported that now filled-in sloughs and streams in or near Highway 99 once supported coho and eulachon, which were also harvested while they were resident on the Fraser River.
- Cowichan Nation Alliance reports that *Tl'uqtinus* was used seasonally for harvesting purposes, with Halalt reporting that they used the area specifically in July to fish for sockeye and pink salmon.
- Areas within the wider Fraser River estuary were also utilized by *Hul'qumi'num'*-speaking peoples for fishing salmon, sturgeon, groundfish, and other marine resources on the foreshore (e.g., Tsawwassen, Point Roberts, Boundary Bay). Certain species (e.g., sockeye and pink salmon, sturgeon, eulachon, trout, flounder) could only be obtained in, or were preferred to be taken at, Fraser River-based locations.

- The Hul'qumi'num Treaty Group have reported that during the reserve creation era in the late nineteenth century, government officials were aware of *Hul'qumi'num Mustimuhw* fishing interests at the Fraser River; however, no reserves were set aside for them in the area. The Hul'qumi'num Treaty Group have also reported that government regulations introduced in the same era had the effect of restricting their access to fishing in the Fraser River. Despite these changes, *Hul'qumi'num Mustimuhw* say they continued to use the Fraser River for fishing, including commercially, into the early twentieth century.
- Member First Nations of the Cowichan Nation Alliance have been attempting to restore former fisheries within the Fraser River through Fisheries and Oceans Canada (DFO). Access to sockeye for member First Nations is said to be provided by DFO annually in Johnstone Strait and “off the mouth of the Fraser River”. In the vicinity of the Project area, however, access has been subject to negotiations with First Nations local to the lower Fraser River, and has been limited, occurring only in 2005, 2006, and 2008. In those years, the specific locations in the South Arm in which member First Nations of the Hul'qumi'num Treaty Group fished for food, social, and ceremonial (FSC) purposes under communal licences was below the Port Mann Bridge generally, as well as specifically, on some occasions, below the easterly point of Kirkland Island (i.e., downstream of the Project area). The Cowichan Nation Alliance has stated that it is in ongoing, active litigation over its asserted fishing rights on the South Arm of the Fraser River.
- The Hul'qumi'num Fisheries Limited Partnership (HFLP) is a commercial fishing business in which some of the Cowichan Nation Alliance member groups participate (Halalt, Penelakut, and Stz'uminus). Species harvested through this enterprise are crab, prawn, halibut, herring, rockfish, sablefish, and salmon.

3.1.3 Hunting/Trapping

- Cowichan Nation Alliance has previously reported that Highway 99 was built on what was once a prime harvesting location for deer, ducks, and geese, among other species.
- Canada goose, northern shoveler, and green-winged teal would have been available to the Cowichan people year-round.
- The south shore of Lulu Island, along the South Arm of the Fraser River, has been reported as a prime spot for trapping beaver, mink, and muskrat; bear, grouse, elk, squirrel, and porcupine were also hunted by the Cowichan people on the South Arm. The Cowichan Nation Alliance as a group has stated a desire to resume the harvest of traditional resources in the Project area.
- Cowichan Nation Alliance has also stated that its members revere bald eagles, which were not hunted. Their Elders have indicated that eagle numbers in the Richmond area have been dwindling each year. Breeding habitat along the Highway 99 corridor on Lulu Island has been previously noted.

3.1.4 Gathering

- Cowichan Nation Alliance report that in the marshy areas south of Canoe Passage near Brunswick Point – in the area of *Xwulits'um*, or place for cutting (cattails) – as well as in the area of *Tl'uqtinus* and across the Fraser River on Tilbury Island, several varieties of cattails and rushes (*stth'equn*) were once harvested.
- Berries and other plants were gathered and cultivated by the ancestors of the Cowichan Nation Alliance member bands at *Tl'uqtinus*, and were harvested from other locations in the Project area. These plants included wild rose, rose hips, crabapples, elderberries, horsetail, labrador tea, Indian hemp, trembling aspen, mock orange, oregon grape, maple leaves, cranberries, blueberries, blackberries, wapato, bulrushes/reeds (*stth'equn*), as well as seaweed. With respect to berry plants at *Tl'uqtinus* specifically, a 1979 map produced by Environment Canada noted an “Indian residence” at this location, accompanied by the caption (not attributed to any specific Aboriginal group): “It is known that the Indians who lived here for several thousand years harvested berries from the bogs and used fire to maintain open areas for the berry bushes by preventing encroachment from pine trees”.
- Cowichan Nation Alliance has indicated that they wish to see existing bogs on Lulu Island near the Highway 99 corridor – specifically, one near Williams Road (which runs perpendicular to Highway 99) and another near the Richmond Nature Park (bisected by Highway 99 at Westminster Highway) – protected to support future use of traditional resources, like berries and other bog ecosystem flora. At *Tl'uqtinus*, which is currently surrounded by blueberry farms, Cowichan Nation Alliance has raised the potential for their former berry grounds to be re-established.

3.1.5 Archaeology and Cultural Heritage Interests

- Locations along the South Arm of the Fraser River of importance to the Halalt in the vicinity of the Project include, but are not limited to, *Tl'uqtinus*, spanning the north shore from opposite Deas Island to opposite Tilbury Island.
- Halalt has specifically noted the importance of archaeological site DgRs-17.

3.1.6 Other Related Interests

- Cowichan Nation Alliance has stated that it asserts Aboriginal title to *Tl'uqtinus*, and given where *Tl'uqtinus* is reportedly situated, to the Project footprint. The Cowichan Nation Alliance has expressed its view that this title includes the right to manage the land, determine the uses to which it can be put, and obtain any economic benefits from it. Cowichan Nation Alliance has advised that it is also working to re-establish culturally integral practices (e.g., harvesting fish, waterfowl, plants) on the South Arm and at the mouth of the Fraser River, including at and about *Tl'uqtinus*.

- The Cowichan Nation Alliance has previously reported that for the last generation its member First Nations have been rejuvenating their access to the waterways that once served as the highways for their ancestors, working with the currents and tides to travel for FSC purposes. The Cowichan Nation Alliance has expressed concern regarding the contaminants and the sustainability of vital habitats that are necessary to support their members.

4.0 Potential Effects

This section provides a summary of the methodology used to identify potential adverse effects of the proposed Project on the exercise of Aboriginal Interests by Aboriginal Groups during Project construction and operation, followed by a summary of potential effects on Halalt s Aboriginal Interests, specifically. For a more detailed description, refer to **Section 10.1.3.3. Potential Effects**.

4.1 Methodology for Identification of Potential Effects

The first step in the effects assessment on Aboriginal interests was the identification of potential adverse effects on traditional use activities and related interests as a result of Project construction or operation. To evaluate these potential adverse effects, the findings of the following Valued Component (VC) chapters in Part B of the Application were considered, including identified mitigation measures, residual effects, cumulative effects and follow up strategies:

- **Section 4.4 Fish and Fish Habitat**
- **Section 4.6 Marine Mammals**
- **Section 4.7 Vegetation**
- **Section 4.8 Terrestrial Wildlife**
- **Section 5.2 Marine Use**
- **Section 5.3 Land Use**
- **Section 5.5 Visual Quality**
- **Section 6.1 Heritage Resources**
- **Section 7.1 Human Health**

The findings of the following Intermediate Component (IC) chapters were also considered in the assessment:

- **Section 4.1 River Hydraulics and River Morphology**
- **Section 4.2 Sediment and Water Quality**
- **Section 4.9 Air Quality**
- **Section 4.10 Atmospheric Noise**

The assessment of potential adverse effects of the Project on the exercise of Aboriginal Interests, including measures to address those effects, are presented in sections 10.1.3.3 through 10.1.3.5, and largely applies the same methods used in Part B of the Application for the IC and VC assessments, as outlined in **Section 3.0 Assessment Methodology**.

In addition to information from the VC and IC assessments that support the assessment of potential effects on Aboriginal Interests, information from a Health Impact Assessment (HIA) undertaken to support Project planning, including mitigation recommendations, has been integrated into the assessment of potential effects on Aboriginal Interests. The HIA for the Project can be found at <https://engage.gov.bc.ca/masseytunnel>. A summary of the key findings is provided in **Section 7.2 Health Impact Assessment**.

4.2 Selection of Indicators

Four parameters were chosen as indicators to understand and evaluate potential Project-related effects on the exercise of Aboriginal Interests. The rationale for their selection is presented in the following table.

Table 2 Indicators for the Aboriginal Interests Assessment

| Indicator | Rationale for Selection |
|--|---|
| Access to preferred locations for the exercise of Aboriginal Interests | Project components or activities could result in changes in access to or patterns of travel between traditional use locations on land or water |
| Availability of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in distribution or movement, relative abundance, or habitat area or composition of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |
| Quality of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in the real or perceived quality of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |

| Indicator | Rationale for Selection |
|---|---|
| Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests | Project components or activities could result in: (1) direct sensory disturbance to traditional users (e.g., from noise, vibration); and/or (2) indirect changes to cultural practices, customs or traditions – i.e., cultural heritage or the expression and transfer of cultural values or ways of knowing (e.g., language, laws/governance, stories, spiritual beliefs) – tied to the cultural landscape or to the traditional use of specific traditional use locations or resources within that landscape. |

Potential adverse effects on the indicators noted above were analyzed in terms of the type and level of effect that Project components and activities may be expected to have on the exercise of Aboriginal Interests.

For the purposes of this assessment, no effect was understood to mean that no interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests would be expected. Where it was determined that an interaction, and potential effect, could occur, the following definitions were used to guide the characterization of the effect as negligible or measurable:

- Negligible – An interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests may occur, but modifications to the use of preferred options would not be expected.
- Measurable – Modifications to the exercise of Aboriginal Interests at preferred locations or in relation to preferred resources may be needed, and may be considered to be:
 - Minor (minimal or temporary modifications may be required to use preferred options),
 - Moderate (more frequent or longer term modifications may be required to use preferred options), or
 - Serious (permanent or indefinite modifications may be required potentially resulting in the loss of preferred options).

4.3 Identified Potential Effects

As noted above, the first step in evaluating potential adverse effects on Aboriginal Interests was a consideration of the findings for relevant Part B VCs, including identified mitigation measures, residual effects, cumulative effects and follow up strategies. The residual effects with the potential to result in an adverse effect on Aboriginal Interests are then carried forward in the assessment. Using the four indicators noted in the previous section, the potential Project-related effects and level of effect predicted in relation to Halalt's exercise of Aboriginal Interests remaining after Part B mitigation are as follows:

Table 3 Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests

| | Construction | | Operation | | Residual Potential Effects |
|---|--------------|------------|------------|------------|----------------------------|
| | Negligible | Measurable | Negligible | Measurable | |
| River locations for traditional use as a result of changes to physical characteristics of these locations | ✓ | | ✓ | | |
| Instream locations for traditional use | ✓ | | ✓ | | |
| Upland locations for traditional use | ✓ | | ✓ | | |

Table 4 Changes in Availability of Preferred Resources for the Exercise of Aboriginal Interests

| | Construction | | Operation | | Residual Potential Effects |
|--|--------------|------------|------------|------------|----------------------------|
| | Negligible | Measurable | Negligible | Measurable | |
| Fish resources for traditional use | ✓ | | ✓ | | |
| Marine mammal resources for traditional use | ✓ | | ✓ | | |
| Terrestrial wildlife resources for traditional use | ✓ | | ✓ | | |
| Vegetation resources for traditional use | ✓ | | ✓ | | |

Table 5 Changes in Quality of Preferred Resources for the Exercise of Aboriginal Interests

4.4 Potential Project-Related Effects on Halalt’s Aboriginal Interests

Using the methodology presented in **Section 10.1.3.3 Potential Effects**, Table 7 provides the potential incremental Project-related effects, following mitigation of Project-related effects on Part B VCs and ICs as described in Part B, related to Halalt’s Aboriginal Interests as summarized in Existing Conditions were identified for Project Construction and Operation. A discussion of potential Project-related effects on fishing, hunting/trapping, gathering and archaeology and cultural heritage follows the table.

Table 7 Summary of Potential Project-Related Effects

| Indicator | Potential Project-Related Effect |
|--|---|
| Project Construction | |
| Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Availability of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Experience in Exercising, or tied to the Exercise, of Aboriginal Interests | <ul style="list-style-type: none"> • Potential temporary direct (minor) effect on quality of experience related to construction-related noise • Potential temporary indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance |
| Project Operation | |
| Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Availability of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |

| Indicator | Potential Project-Related Effect |
|--|---|
| Changes in Quality of Experience in Exercising, or tied to the Exercise, of Aboriginal Interests | <ul style="list-style-type: none"> • Potential indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance while engaged in those uses • Potential permanent direct (minor) effect on quality of experience related to traffic noise • Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses |

4.5 Fishing

Halalt harvested the following s historically on the South Arm of the Fraser River included sockeye and pink salmon, sturgeon, shellfish, and marine mammals. Cowichan Nation Alliance has previously reported that now filled-in sloughs and streams in or near Highway 99 once supported coho and eulachon, which were also harvested while resident on the Fraser River. Certain species (e.g., sockeye and pink salmon, sturgeon, eulachon, trout, flounder) could only be obtained in, or were preferred to be taken at, Fraser River-based locations. Member First Nations of the Cowichan Nation Alliance have been attempting to restore former fisheries within the Fraser River through Fisheries and Oceans Canada (DFO).

The proposed Project has the potential to affect fishing practices through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred fishing locations by Halalt, as a result of changes in river hydraulics or morphology, are expected to be negligible before mitigation. Potential changes in access to instream locations for fishing by Halalt during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to fishing locations by Halalt from instream construction activities are expected to be negligible. While it is acknowledged that Cowichan Nation Alliance has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Mitigation measures identified in the fish and fish habitat assessment to address Project-related effects on fish are expected to be effective at addressing potential effects on the availability of fishing resources preferred by Halalt. Further, as residual effects on fish identified in the fish and fish habitat assessment are not anticipated to affect population integrity, potential residual effects as a result of Project construction activities, would not be expected to measurably affect the availability of preferred fish resources.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of fishing resources preferred by Halalt; therefore, Potential Project-related effects on Halalt fishing would be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when fishing are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in in Section 4.10 Atmospheric Noise are expected to largely address a potential Project-related effect to the quality of experience while fishing. At preferred fishing locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Halalt.

Section 5.5 Visual Quality predicts that residual effects to visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Halalt is fishing. As this landscape has been previously modified, the potential Project-related effect on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Halalt's Aboriginal Interests related to fishing are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.6 Hunting/Trapping

Cowichan Nation Alliance reported that Highway 99 was built on what was once a prime harvesting location for deer, ducks, and geese, among other species. Along the Fraser River, including Canoe Pass, as well as elsewhere in their collective territory, brant goose, canvasback

duck, common merganser, and mallard have been specifically identified as harvested species by Cowichan Tribes, and that this harvesting would have taken place in the fall. Canada goose, northern shoveler, and green-winged teal would have been available to the Cowichan people year-round. The south shore of Lulu Island, along the South Arm of the Fraser River, has been reported as a prime spot for trapping beaver, mink, and muskrat; bear, grouse, elk, squirrel, and porcupine were also hunted by the Cowichan people on the South Arm.

The proposed Project has the potential to affect hunting and trapping through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred hunting and trapping locations by Halalt as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for hunting and trapping by Halalt during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to hunting and trapping locations by Halalt from instream construction activities, are expected to be negligible. While it is acknowledged that Cowichan Nation Alliance has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations for hunting and trapping by Halalt resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with hunting and trapping locations.

Mitigation measures identified in the marine mammal and terrestrial wildlife assessments are expected to be effective at addressing potential effects on the availability of hunting and trapping resources preferred by Halalt. Therefore, Project-related effects on hunting and trapping related to potential changes in the availability of resources would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for hunting and trapping by Halalt; therefore, Potential Project-related effects on Halalt fishing would be expected to be negligible.

Project operation is not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when hunting and trapping are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** to address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while hunting and trapping. At preferred hunting and trapping locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Halalt.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Halalt is hunting and trapping. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Halalt's Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.7 Gathering

Cowichan Nation Alliance report that in the marshy areas south of Canoe Passage near Brunswick Point – in the area of *Xwulits'um*, or place for cutting (cattails) – as well as in the area of *Tl'uqtinus* and across the Fraser River on Tilbury Island, several varieties of cattails and rushes (*stth'equn*) were once harvested. Berries and other plants were gathered and cultivated by the ancestors of the Cowichan Nation Alliance member bands at *Tl'uqtinus*, and were harvested from other locations in the Project area. These plants included wild rose, rose hips, crabapples, elderberries, horsetail, labrador tea, Indian hemp, trembling aspen, mock orange, oregon grape, maple leaves, cranberries, blueberries, blackberries, wapato, bulrushes/reeds (*stth'equn*), as well as seaweed. Tree species available in the vicinity of the Fraser River and traditionally used by the Cowichan Tribes for manufacturing include crabapple, willow, alder, cottonwood, cedar, spruce, aspen, yew, hemlock, and vine maple.

The proposed Project has the potential to affect gathering through changes in access to preferred locations, changes in availability of preferred resources, changes in quality of preferred resources and changes in quality of experience when gathering.

Potential changes in access to preferred gathering locations by Halalt as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for gathering by Halalt during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to gathering locations by Halalt from instream construction activities, are expected to be negligible. While it is acknowledged that Cowichan Nation Alliance has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations for gathering by Halalt resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with gathering locations.

Mitigation measures identified in the vegetation assessment to address Project-related effects on terrestrial vegetation are expected to be effective at addressing potential effects on the availability of resources for the exercise of Aboriginal Interests related to gathering. Therefore, Project-related effects on gathering related to potential changes in the availability of vegetation would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for gathering by Halalt; therefore, Potential Project-related effects on gathering related to potential changes in the quality of resources would therefore be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when gathering are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while gathering. At preferred gathering locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Halalt.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Halalt is gathering. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Halalt's Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.8 Archaeology and Cultural Heritage Interests

Locations along the South Arm of the Fraser River of importance to the Halalt in the vicinity of the Project include, but are not limited to, *Ti'uqtinus*, spanning the north shore from opposite Deas Island to opposite Tilbury Island, and *Hwlhitsu'm* or *Xwulit'sum*, on Canoe Pass. Both of these areas are considered by Cowichan Nation Alliance member bands as ancestral village and resource sites.

The proposed Project has the potential to affect Cowichan Nation Alliance's Aboriginal Interests related to archaeology and cultural heritage through changes in access to preferred locations and changes in quality of experience.

Potential changes in access to locations related to Halalt's archaeological and cultural heritage interests as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations related to Halalt's interests related to archaeology and cultural heritage during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to locations related to Halalt's archaeological and cultural heritage interests from instream construction activities are expected to be negligible. While it is acknowledged that Cowichan Nation Alliance has reported a desire for higher levels of use in

this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations related to Halalt's archaeological and cultural heritage interests resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and not expected to overlap with locations related to Halalt's archaeological and cultural heritage interests.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** would also be expected to address the potential Project-related effect to the quality of experience while undertaking activities related to cultural heritage. At locations related to Halalt's archaeological and cultural heritage interests that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Halalt.

As reported in **Section 6.1 Heritage Resources**, no archaeological or historical sites were identified within the Project area during fieldwork; however, there may be other locations with intangible cultural value or meaning to Halalt (e.g., spiritual or storied sites, named places) potentially affected by the Project. In addition, physical alterations to the landscape may affect archaeological or historical sites, and how this landscape is experienced culturally.

As a result, mitigation measures proposed in Part B are not expected to address a potential incremental and permanent Project-related effect tied to Halalt's Aboriginal Interests related to archaeology and cultural heritage that may be associated with the introduction of a new prominent feature to the cultural landscape. As this landscape has been previously modified by anthropogenic changes, the potential incremental Project-related effect on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal, but permanently disruptive for Halalt, who have identified a historical connection to, and continued or desired use of, sites or places that help define the cultural landscape in the Project area.

Additional mitigation to address this potential incremental effect that is not otherwise addressed in the Application is proposed in **Section 10.1.3.4** and summarized below under Mitigation.

5.0 Mitigation

This section provides a summary of mitigation measures identified to address potential Project-related effects on the exercise of Aboriginal Interests by Halalt. For a more detailed discussion, refer to **Section 10.1.3.4 Mitigation**.

Mitigation measures identified for the relevant VCs and ICs in Part B of the Application were reviewed to assess their effectiveness at addressing potential Project-related effects on the exercise of Aboriginal Interests related to those VCs. Examples of mitigation that are proposed in the Application to address potential effects on VCs and ICs, with the potential to result in an effect on Aboriginal Interests, include:

- Avoiding fisheries sensitive timing windows during key Project activities.
- Developing a Marine Access Management Plan to ensure marine use activities, including those supporting Aboriginal Interests, can continue during Project construction.
- Potential effects to air quality, particularly in relation to terrestrial wildlife.
- Scheduling activities with the potential to generate underwater noise to avoid potential effects on marine mammals.
- Development and implementation of a Terrestrial Vegetation and Wildlife Management Plan with measures to minimize disturbance and loss of vegetation, prevent soil compaction, and minimize clearing in order to minimize effects on vegetation.

These measures are expected to be largely effective at avoiding, reducing, or otherwise managing potential Project-related effects on the exercise of Aboriginal Interests during Project construction and operation.

Recognizing some measurable effects on Halalt's Aboriginal Interests could remain following the application of mitigation to address potential effects on the relevant VCs and ICs in Part B, the following additional measures have been identified to address such effects:

- Ongoing consultation with Halalt regarding proposed measures, management plans, and monitoring programs related to intermediate components and valued components assessments; and
- Development of a Cultural Heritage Management Plan.

6.0 Residual Effects

With the implementation of mitigation measures identified in Section 10.1.3.4 and summarized above, residual adverse effects of the proposed Project on the exercise of Aboriginal Interests are expected to be negligible (i.e., not measurable or detectable), and are not further assessed.

7.0 Summary and Conclusion

Part C of the Application builds on consultation undertaken to date to understand Halalt's Aboriginal Interests and provides for an assessment of potential Project-related effects of the Project on Aboriginal Interests.

The Ministry began consultations with Halalt prior to the submission of the Project Description, which is the end of the Initial Consultation Phase. Both EAO and the Ministry consulted with Halalt during the Pre-Application Phase, which concluded with the submission of the Application. The main concerns expressed by Halalt during consultations include:

- Potential impacts to Halalt title, rights and culture;
- Consideration for future uses should include Halalt's plans;
- Aboriginal participation and Project-related opportunities (e.g., potential employment, training, contracting and economic development opportunities);
- Effects to fish and fish habitat, and importance of fish and fish habitat including species of cultural and economic importance such as eulachon, sturgeon and salmon;
- Potential effects of pile driving, blasting and underwater noise generated by Tunnel decommissioning and other construction activities;
- Adequacy of EA methodology to address social and cultural effects;
- EA process and associated timelines;
- Strength of claim;
- Social effects of the Project on Halalt's ability to transfer knowledge, language and participate in socio-cultural practices;
- Cumulative effects;
- Concerns related to dredging, potential for increased vessel traffic and larger vessels resulting from Tunnel decommissioning;
- Potential effects on Fraser River flow rates after Tunnel removal; and
- Potential effects of run off and drainage.

Based on information provided by Halalt and other publicly-available sources, the Ministry developed a summary of past, present and desired future use of the proposed Project area and its surroundings for the purposes of fishing, hunting/trapping, gathering, archaeology and cultural heritage interests and other related interests. This summary indicates that Halalt has, does and intends to continue to use the Fraser River for cultural purposes.

Relying first on the results of the effects assessments for related VCs and ICs in Part B, the assessment of potential effects of Halalt's Aboriginal Interests considered four indicators:

1. Access to preferred locations for the exercise of Aboriginal Interests;
2. Availability of preferred resources for the exercise of Aboriginal Interests;
3. Quality of preferred resources for the exercise of Aboriginal Interests; and
4. Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests.

As reviewed in **Section 10.1.3.3** and **Section 10.1.3.4**, the mitigation measures, management plans, and monitoring programs identified in Part B of the Application for ICs or VCs linked to the exercise of Aboriginal Interests are expected to be largely effective at addressing the incremental Project-related effects noted above on the exercise of Aboriginal Interests by Halalt, except in the following potentially measurable cases:

- Project construction:
 - Potential temporary direct (minor) effect on quality of experience related to construction-related noise and a potential temporary indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance
- Project operation:
 - Potential permanent direct (minor) effect on quality of experience related to traffic noise and a potential indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance while engaged in those uses
 - Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses.

The following additional measures have been identified to address the above-noted effects:

- Ongoing consultation with Halalt regarding proposed measures, management plans, and monitoring programs related to VC and IC assessments; and
- Development of a Cultural Heritage Management Plan.

With the implementation of mitigation proposed to address potential effects on VCs and ICs, as well as additional mitigation proposed to address potential residual effects on Aboriginal Interests, no effects on the exercise of Aboriginal Interests by Halalt, as a result of the Project, are expected.

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. Environmental Assessment Act (B.C. EAA), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. EAA sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. EAA, and that it requires an EAC.

The Project as proposed is not subject to review under the Canadian Environmental Assessment Act, 2012, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the Environmental Assessment Act.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------------|-------------------------|
| Social and cultural effects and the adequacy of EA methodology | <p>Concerns related to the adequacy of Environmental Assessment are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Social and cultural effects of the project are considered in Part C of the Environmental Assessment Application (Application). Where Aboriginal Groups values and perspectives have been provided to the Proponent regarding environmental, economic, social, heritage or health valued components (VCs), they have been incorporated, where applicable into the Part B assessment of those VCs.</p> | Referred to EAO | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|--------------------------------------|
| Strength of Claim assessment and related depth of consultation. | Concerns related to the strength of claim assessment have been referred to EAO and MARR. | Referred to EAO and MARR | None |
| Project's EA Process and its associated timelines. | Concerns relating to the EA process and its associates timelines were referred to EAO. EAO issued a memo to members of the Working Group on March 18, 2016 in response to questions and concerns related to the EA process and its associated timelines. The Ministry understands that EAO responded to Halat First Nations's queries regarding the EA Process and associated timelines. | Referred to EAO | None |
| Effectiveness and nature of the EA process as well as current volume of EAs underway | Concerns relating to the broad concern related to the effectiveness and nature of the Environmental Assessment Process have been referred to EAO. While the Ministry is unable to address the concern related to the current volume of EA's underway, the Ministry has and will continue to work with Halalt First Nation to support their participation in this particular Project's review process and to plan for consultation activities in a manner that is mindful of the current volume of referrals that Halalt First Nation is working on. Support to date has included Pre-Application capacity funding. | Referred to EAO | None |
| Lack of resources and funding for First Nations communities. | The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. | Addressed | Funding for Application Review Phase |

ABORIGINAL INTERESTS

There are potential Project related impacts to Halalt First Nation title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape

Quality of experience while engaged in or tied to traditional use

- cultural landscape

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

Quality of experience while engaged in or tied to traditional use

- changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
- Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Halalt First Nation as a result of the Project are not expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Potential impacts to Halalt First Nation title, Rights and culture. Identification of future developments should include potential Halalt First Nation title and rights resulting from treaty negotiations or proof of title.</p> | <p>Potential Project related impacts to Halalt First Nation title, Rights and culture, the level of effect predicted, and mitigation measures are outlined the Application. The Ministry will continue to consult with Halalt First Nation to ensure any effects are minimized.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application</p> |
| <p>Identification of “other requirements that are relevant to the Project, including international agreements or other agreements” should be included in the Crown’s Constitutional obligations to First Nations“</p> | <p>The Crown’s constitutional obligations are fundamental to consultation with Halalt First Nation and the EA process. The obligations within the context of the EA are addressed in Part C of the Application.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation</p> |

| | available through public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3 and Section 10.3 of the Application. | | |
| Protection of Halalt First Nation's rights to harvest within the Project area. | Halalt First Nation's rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures outlined in Table 10.3-1 and Section 10.1.3.4, residual effects on the exercise of Aboriginal Interests by Halalt First Nation as a result of the Project are not expected. | Addressed in Application | Ongoing consultation and Implementation of measures outlined in Section 10.1.3.4 |
| Assessment of cumulative effects in regards to the inclusion of other reasonably foreseeable projects and activities. | The Ministry's cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|-------------------------|
| Concern that the overlapping construction period of GMT and Pattullo projects needs to be considered in the assessment. | Rehabilitation of the Pattullo Bridge will be completed by October 2016. The replacement of the Pattullo bridge is in planning stages and a construction period has yet to be established. | Addressed | None |
| Consideration of cumulative effects on aboriginal rights, including measurement against a pre-industrial baseline | The Application will include historical context as outlined relating to changes in use over time by Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by First Nations or was otherwise available from publicly available sources. However, there is no EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests. | Addressed | None |
| Absence of a comprehensive study of cumulative effects on the Fraser River | While the Ministry acknowledges that Halalt First Nation is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|-------------------------|
| Length of time tolls are in place | <p>The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |
| Revenue sharing opportunities from tolling | <p>Revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |

| ABORIGINAL CONSULTATION | | | |
|---|---|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.</p> <p>Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process | Halalt First Nation received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Halalt First Nation as it relates to confidentiality and dissemination | The Ministry understands and respects that certain information shared by Halalt First Nation may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Halalt First Nation requests to keep information confidential. | Addressed | Appropriate use of confidential information |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|---|
| Funding for Traditional Use Study | The Ministry signed a funding agreement with Halalt First Nation which provided funding for a Traditional Use Study. | Addressed | None |
| Capacity funding to facilitate participation in the Project review process | Halalt First Nation received funding for the Pre-Application Phase. However, subject to the requirements of applicable laws, the Ministry will respect Halalt First Nation requests to keep information confidential. | Addressed | Appropriate use of confidential information |
| Funding for Traditional Use Study | The Ministry signed funding agreements with Halalt First Nation which provided funding for a Traditional Use Study. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project's Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests

Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes

Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns

Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes

Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects

Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.

Incorporate community and traditional knowledge in Project components

Document and report to EAO on the Ministry's Aboriginal consultation program at times specified by EAO.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

| <p>Opportunities for cultural recognition and naming</p> | <p>The Ministry is exploring opportunities for cultural recognition and naming and will to work with Halalt First Nation on this matter.</p> | <p>Ongoing</p> | <p>Further engagement with Halalt First Nation is planned to explore opportunities related to cultural recognition and naming, art and interpretive signage</p> |
| <p>Project-related employment, training, contracting, and economic development opportunities. Equity and revenue sharing for Halalt First Nation and importance of initiating related discussions with Halalt First Nation during Pre-Application Stage. Aboriginal procurement policy.</p> | <p>The Ministry is committed to working with Halalt First Nation to identify potential opportunities to benefit from the Project. The Ministry acknowledges that Halalt First Nation wants to prepare its membership for employment opportunities and will work with Halalt First Nation to identify ways to support community preparedness.</p> | <p>Ongoing</p> | <p>The Ministry will share information including identification of potential employment, training, contracting and economic development opportunities as it becomes available to support community preparedness. The Ministry welcomes input from Halalt First Nation on the type of information that would be useful.</p> |
| <p>Interest in land recovery at Green Slough</p> | <p>As part of the Project, agricultural land will be protected as much as practical. Once the project is completed, there will be a determination of surplus lands, if any, and disposition will follow the appropriate process including consultation.</p> | <p>Addressed</p> | <p>Determination of surplus lands and consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------|--|
| Adequate training time to take full advantage of potential future Project work activities | The Ministry is committed to working with Halalt First Nation to identify potential opportunities to benefit from the Project. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Halalt First Nation to identify ways to support community preparedness. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful. |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Development of a mitigation plan to ensure protection to the Lulu-island-Delta water main.

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Change in flow rates after Tunnel removal | <p>The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm.</p> <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor.</p> <p>River Hydraulics and River Morphology are addressed in Section 4.1.</p> | Addressed in Application | Implementation of mitigation measures outlined in Section 4.1.4 |
| Factoring in extreme weather events in River Hydraulics model | Extreme weather events are considered and planned for. River Hydraulics and River Morphology are addressed in Section 4.1.4. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.1.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|--|
| <p>Potential for contaminants in the tunnel and how this may affect tunnel decommissioning.</p> | <p>The Ministry will consult with Fisheries and Oceans Canada and Port Metro Vancouver regarding Tunnel decommissioning, and will incorporate the requirements of these agencies in the planning and implementation of decommissioning activities.</p> <p>If potentially hazardous building materials are identified in the Tunnel, a detailed plan for removing and appropriately disposing of such material will be developed prior to initiating decommissioning activities. Any potentially hazardous material identified will be managed in accordance with applicable legislation, including the B.C. Hazardous Waste Regulation, B.C. Reg. 63/88, and the Workers' Compensation Board of B.C. Occupational Health and Safety Regulation, B.C. Reg. 296/97.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.1.4 and 4.2.4</p> |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Project activities undertaken in the upland ditch systems will follow Standards and Best Practices for Instream Works.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|---|
| Potential effects of run off and drainage | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected.</p> <p>Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 |
| Effect of the Tunnel on dissolved oxygen content within the river. | <p>The Ministry is following up with Halalt First Nation to obtain further clarification regarding their concern regarding the effect of the Tunnel on dissolved oxygen content within the river.</p> | Ongoing | Clarification regarding concern |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Impact of potential pollutants and contaminants within the tunnel walls on the river if left in place. | The tunnel decommissioning is anticipated to involve the removal of the four in-river sections of the Tunnel. | Addressed | None |
| Improved ditches will result in less filtering of deleterious materials | Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Sediment and Water Quality is addressed in Section 4.2 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 |
| Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River. | Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application. | Addressed in Application | None |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term potential of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|--|
| <p>Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon</p> | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to Halalt First Nation. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.4.4</p> |
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.3.4 and 4.4.4</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.
 Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan
 Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Halalt First Nation has not voiced any specific issues or concerns with respect to Marine Mammals. | | | |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail marsh that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management plan will included in the Construction Environmental Management Plan

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|---|
| Invasive plant species and proposed plans to manage presence during construction | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 |
| Culturally significant plants should be used in planting plans | Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans. | Addressed | The Ministry will develop planting plans with consultation from Aboriginal Groups |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Potential light and noise effects on wildlife and fish.</p> | <p>The Ministry understands that Halalt First Nation is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
| <p>Potential effects of the bridge structure on species such as waterfowl and migratory birds.</p> | <p>The Ministry understands that Halalt First Nation is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--------|---------------------------|--------|-------------------------|
|--------|---------------------------|--------|-------------------------|

| | | | |
|--|---|---------------------------------|--|
| <p>Potential effects to air quality, particularly as it relates to terrestrial wildlife.</p> | <p>The Ministry understands that Cowichan Tribes is concerned with the potential effects of air quality, particularly on terrestrial wildlife species. Projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
|--|---|---------------------------------|--|

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry's 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Noise monitoring program.

Site specific schedules and activities.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Increase in traffic and consequent increase in associated noise and vibration due to the increases capacity of the new bridge.</p> | <p>The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new Bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment, after mitigation, are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the Highway but do not exceed what is acceptable for residential, educational or institutional facilities. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |
| <p>Choice of building materials in relation to noise and vibration</p> | <p>The Ministry confirms that appropriate building materials will be used to mitigate noise and vibration. Mitigation in accordance with the Ministry’s 2014 Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways will be implemented, as warranted, at select locations to avoid or minimize potential Project-related increase in post-construction noise levels. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

During construction, a measureable effect on access to instream locations for traditional use has been determined.

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Potential effects of construction during fishing season on fishing activities. Impacts of Tunnel decommissioning on Aboriginal fisheries, specifically as it relates to timing.</p> <p>“The proposed project has a direct impact on how we are able to use and navigate the areas surrounding the proposed project, and the impact of the project as it limits this ability needs to be considered in the Aboriginal Interests Assessment.”</p> <p>“Future exercise of our Aboriginal rights to fish (and also to harvest) including in-water and upland of the South arm of the Fraser should be considered when assessing project impacts of our interests.”</p> | <p>Potential interference with Halalt First Nation fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |
| <p>Facilitation of increased shipping in the river</p> | <p>The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river.</p> | <p>Addressed</p> | <p>None</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Residual & Cumulative Effects

There is a low, short-term probability of disturbance to residential, commercial and industrial land use during construction.

There is a moderate , short-term probability of disturbance to recreational users near the new bridge during construction

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Halalt First Nation has not voiced any specific issues or concerns with respect to Land Use | | | |

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a chance find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites and specific concern for any effects on the ǻǻqtinǻs/TI'uqtinus site and potential archaeological values at interchanges</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Halalt First Nation.</p> <p>All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment.</p> <p>Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |
| <p>Participation in archaeological fieldwork and review of archaeological draft reports</p> | <p>Halalt First Nation was invited to participate in all archaeological field work to date and was provided the opportunity to review draft archaeological reports.</p> | <p>Addressed</p> | <p>Halalt First Nation will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports.</p> |
| <p>Ethnographical content in reports does not accurately reflect Halalt First Nation historical presence within the Project area</p> | <p>The Ministry noted Halalt First Nation concern that ethnographical content in Project reports does not accurately reflect Halalt First Nation historical presence within the Project area. The Ministry continues to work with Halalt First Nation to address this concern.</p> | <p>Ongoing</p> | <p>Ongoing consultation</p> |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

A negligible effect on access to instream locations for traditional use has been determined.

7.0 HUMAN HEALTH

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.
 A negligible effect on access to upland locations for traditional use has been determined.
 A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation
 Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.
 Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

Residual & Cumulative Effects
 No significant Project-related residual or cumulative effects on human health are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---|-------------------------|
| Aboriginal health is not currently being considered in the assessment | Aboriginal health was considered in the assessment of potential Project-related effects on human health, including community and social factors. Human Health is addressed in Section 7.1 of the Application. | Addressed in Assessment and Application | None |
| Current conditions along the foreshore and in the Fraser River are not properly understood and have not been considered in the Human Health Assessment | Current conditions along the foreshore were considered in the assessment of potential Project-related effects on human health, including community and social factors. Human Health is addressed in Section 7.1 of the Application. | Addressed in Assessment and Application | None |

| 8.0 ACCIDENTS AND MALFUNCTIONS | | | |
|---|--|--------------------------|--|
| <p>Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.</p> <p>In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | As outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan), an Emergency Response and Spill Contingency Plan will be developed. The Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills. | Addressed in Application | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |
| Contaminants from automobile emission currently captured in Tunnel. New Bridge will send emissions directly into the air and Fraser River and settle on the foreshore | Automobile emissions are currently released from the Tunnel through a series of vents. Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|-----------|-------------------------|
| | Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects. | | |
| New Bridge could “unleash pent-up demand” and create even more congestion | The Project has been designed to address issues related to current and future traffic safety, congestion and reliability, and to help achieve regional mode share targets by facilitating travel across the Fraser River by transit, HOVs, cycling and walking. During operations, the Project will provide travel time savings for commuters or 25-35 minutes per day, improve safety with a forecast 35 percent reduction in collisions, and support provincial and regional strategies to encourage mode shift to transit and carpooling. As proposed, Project-related improvements, including tolling, will moderate traffic growth while effectively serving forecast demand at the crossing. | Addressed | None |

APPENDIX E

Katzie First Nation

1.0 Introduction

This appendix provides a summary of the information presented in Part C Aboriginal Consultation (Part C) of the Application for an Environmental Assessment Certificate (the Application) regarding the assessment of effects on Aboriginal Interests. Aboriginal Interests are defined as asserted or determined Aboriginal rights, including title, or treaty rights. This appendix presents the information specific to Katzie First Nation (Katzie).

The organization of the information presented generally follows Part C and includes the following sections:

- Consultation;
- Community Profile;
- Existing Conditions;
- Potential Effects;
- Mitigation;
- Residual Effects; and
- Summary and Conclusion.

For more detailed information on the effects assessment on Aboriginal Interests related to Katzie, refer to the following sections of Part C:

- Consultation with Katzie (**Section 10.1.2.10**);
- Katzie community profile (**Section 10.1.1.3**);
- Description of existing Katzie Aboriginal Interests (**Section 10.1.3.2**);
- Assessment of potential effects of the Project on the exercise of Katzie Aboriginal Interests (**Section 10.1.3.3**);
- Mitigation relating to potential effects on Aboriginal Interests (**Section 10.1.3.4**); and
- Residual effects on Katzie Aboriginal Interests following application mitigation (**Section 10.1.3.5**).

A summary of Aboriginal Interests Assessment for Katzie is also provided in **Section 10.1.3.8**.

The summary presented in this appendix also incorporated information found in the Katzie Overview Table (**Appendix E2**), which provides detailed information regarding:

- Katzie’s issues and concerns identified to date;
- Identification of potential effects on VCs and ICs that relate to the assessment of effects on Katzie’s Aboriginal Interests;
- The Ministry’s response to specific issues and concerns raised by Katzie;
- The status of these issues and concerns; and
- Next steps required to address outstanding issues and concerns.

2.0 Consultation

This section provides information regarding the consultation activities that the EAO and Ministry carried out prior to submission of the Application.

2.1 EAO-led Consultation Activities

2.1.1 Capacity Funding

When a provincial agency is a proponent of a project going through a provincial EA under the British Columbia *Environmental Assessment Act* (BCEAA), that agency provides funding to Aboriginal Groups to support their involvement in pre-Application and Application review phases in place of EAO providing such funding. The Ministry’s provision of capacity funding is discussed in the following section, Proponent-led Consultation Activities.

2.1.2 Participation in Working Group

EAO invited Katzie and all other Aboriginal groups identified in Schedule B of the Section 11 Order to participate as members of a Working Group.

During the Pre-Application stage, EAO led two Working Group meetings where the Ministry presented information on the Project and the environmental assessment process and received and responded to comments on those presentations. Although Katzie did not attend, materials were provided.

Katzie also participated in the completeness review of Application for an Environmental Assessment Certificate (Application) that considered whether the Application included information requirements set out in the Application Information Requirements.

It is assumed that Katzie will continue as an active member of the Working Group through the environmental assessment process.

2.2 Proponent-led Consultation Activities

The Ministry began consultation with Katzie in early 2014 in order to identify the nature and scope of Katzie's Aboriginal Interests and how they might be affected by the Project. Following is a summary of consultation activities led by the Ministry with Katzie. A more detailed discussion is provided under the Katzie section in **Section 10.1.2.10 Overview of Consultation with each Schedule B Aboriginal Group**. The following sections represent the main activities undertaken in support of Proponent-led consultation and include the following:

- Provision of capacity funding;
- Funding for traditional use, traditional knowledge and other studies;
- Examples of consultation activities; and
- Concerns identified to date.

2.2.1 Capacity Funding

The Ministry entered into a Participation Funding Agreement, including the Initial Consultation and Pre-Application phases for consultation, with Katzie. The Ministry has been working with Katzie regarding their needs for capacity funding to facilitate their participation in the Application Review Phase. Consultation activities that are anticipated to be undertaken during this phase include participation in technical reviews and analyses, involvement in ongoing consultation activities, and presentation of key information regarding their respective Aboriginal Interests.

2.2.2 Traditional Use, Traditional Knowledge & Other Studies

The Ministry provided additional funding to Katzie for the preparation and submission of the traditional use study: *George Massey Tunnel Replacement: Katzie First Nation Traditional Use Study*. The purpose of such studies is to include and consider Aboriginal input and traditional knowledge in the EA. In addition, studies were funded to enhance the Ministry's understanding of Aboriginal Interests and Aboriginal Group's past, present and desired future use as it pertains to the exercise of Aboriginal Interests within the Project area and the potential adverse effects on identified Aboriginal Interests.

2.2.3 Examples of Consultation Activities

A number of consultation activities were undertaken with Katzie during both the Initial Consultation Phase and the Pre-Application Consultation Phase as follows:

Initial Consultation Phase Activities – The Ministry recognized the importance and value of early engagement with Schedule B Aboriginal Groups and undertook an Initial Consultation Phase prior to the Pre-Application Phase. The Initial Consultation Phase concluded in December 16, 2015 with submission of Project Description and Key Areas of Study document. The focus of the Initial Consultation Phase was collection of baseline information and sharing of draft EA-related documents (i.e. Project Description and Key Areas of Study, Application Information Requirements (AIR)). The main consultation activities the Ministry undertook with Katzie included:

- Sharing of Project-related information including focused presentation on topics on interest and/or concern to Katzie;
- Funding for Katzie's participation in Project consultation activities and EA process;
- Katzie participation in field studies;
- Review of draft EA documents such as the Project Description and Key Areas of Study, Heritage Resources Overview Assessment/Archaeological Overview Assessment, Heritage Resources Assessment, AIR and Aboriginal Consultation Plan;
- Meetings with Katzie leadership, staff, consultants, elders and membership; and
- Response and follow up with Katzie regarding the identification and resolution of issues.

Pre-Application Consultation Phase Activities – The Pre-Application Consultation Phase began with the filing of the Project Description and Key Areas of Study document and concluded with the submission of the Application. This phase included the issuance of the Section 11 Order, AIR development and collection of baseline information (may include submission of permit applications). The main consultation activities the Ministry undertook with Katzie included:

- Sharing of Project-related information including focused presentation on topics on interest and/or concern to Katzie;
- Funding for Katzie's participation in Project consultation activities and EA process;
- Meetings with Katzie leadership, staff, consultants, elders and membership;
- Katzie participation in fieldwork;
- Katzie participation in the EA Working Group;
- Review of draft EA documents such as the Application Information Requirements, Aboriginal Consultation Plan, and Aboriginal Consultation Reports; and
- Response and follow up with Katzie regarding the identification and resolution of issues.

2.2.4 Concerns Identified to Date

As outlined above, Katzie’s concerns, identified through consultation undertaken to-date, are presented in **Appendix E2 Katzie First Nation Overview Table**. The Ministry’s response to Katzie’s key concerns regarding potential impacts on Katzie’s Aboriginal Interests are outlined below:

Table 1 Concerns Identified to Date

| Concerns Identified to Date | Response |
|--|---|
| Protection of Kwantlen First Nation’s rights to harvest within the Project area. | Kwantlen’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures in sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife), residual effects on the exercise of Aboriginal Interests by Kwantlen as a result of the Project are not expected. |
| Aboriginal participation and Project-related opportunities <ul style="list-style-type: none"> • Potential employment, training, contracting and economic development opportunities • Cultural recognition and naming | The Ministry is committed to working with Kwantlen to identify potential employment, training, contracting and economic development opportunities and to identify ways to support community preparedness. The Ministry is exploring opportunities for cultural recognition and naming and will work with Kwantlen on these opportunities. |
| Ministry’s approach to procurement for the Project will not result in meaningful benefits to Aboriginal Groups | The Ministry is confident that the Project’s procurement process will effectively allow for benefits to be provided to Aboriginal Groups. |

| Concerns Identified to Date | Response |
|---|---|
| <p>Effects to fish and fish habitat</p> <ul style="list-style-type: none"> • Importance of fish and fish habitat including species of cultural and economic importance such as eulachon, sturgeon and salmon • Potential effects of pile driving, blasting and underwater noise generated by Tunnel decommissioning and other construction activities | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon, salmon to Kwantlen and is committed to avoiding or mitigating any potential effects.</p> <p>The Ministry designed a clear span bridge over the Fraser River South Arm and Deas Slough to avoid or minimize Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat.</p> <p>Kwantlen’s Fisheries Department continues to be very helpful in the review of Green Slough concepts.</p> <p>As outlined in Section 4.3 Atmospheric Noise, sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Underwater noise from these sources will be effectively mitigated by scheduling activities during period of low tide, when work can be completed under shallow water conditions or in the dry.</p> |
| <p>Access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel and the importance of working closely with communities to ensure negative effects are avoided.</p> | <p>Kwantlen’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A negligible direct effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined. Mitigation measures are outlined in Section 5.2.4 (Marine Use Mitigation Measures) of the Application.</p> |

| Concerns Identified to Date | Response |
|---|--|
| <p>Environmental Assessment (EA):</p> <ul style="list-style-type: none"> • Adequacy of methodology to address social and cultural effect | <p>The Ministry acknowledges the importance of Kwantlen’s involvement in the environmental assessment process.</p> <p>Kwantlen’s concerns related to Environmental Assessment including the adequacy of methodology to address social and cultural effects underway is outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> |
| <p>Social effects of the Project on Kwantlen’s ability to transfer knowledge, language and participate in socio-cultural practices</p> | <p>Social effects of the Project on Kwantlen’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Katzie or through available public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3 and Section 10.3 of Part C of the Application.</p> |
| <p>Potential effects on Fraser River flow rates after Tunnel removal</p> | <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Flow rates are discussed in Section 4.1 (River Hydraulics).</p> |

| Concerns Identified to Date | Response |
|---|--|
| Potential effects of run off and drainage | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation.</p> <p>During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.</p> <p>Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will ensure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> |

3.0 Community Profile – Katzie First Nation

Katzie is governed by a chief and council with two-year terms under a custom electoral system. The current term for the four-member council expires in March 2018.

The main Katzie community resides on Katzie IR 1, on the north bank of the Fraser River, west of Port Hammond, and south of the town of Pitt Meadows. Katzie has four other reserves: Katzie IR 2, on the south bank of the Fraser River, upstream of Katzie IR 1 and opposite Port Hammond; Barnston Island IR 3, on the south shore of Barnston Island, which lies within the Fraser River; Pitt Lake IR 4, at the lower end of Pitt Lake; and Graveyard 5, the Katzie cemetery south of Lougheed Highway. Of 570 registered Katzie members, 315 live on reserve. Katzie is working toward finalizing a land code that would apply to Katzie reserve lands pursuant to the federal *Framework Agreement on First Nation Land Management* and the *First Nations Land Management Act*. The Project area does not overlap any current or former Katzie reserve lands.

Katzie describe their traditional territory as “extending south from the headwaters of the Pitt River to encompass Pitt Lake, Pitt Polder, a portion of the Fraser River, and south east to encompass the Nicomekl and Serpentine Rivers”. In the east, this territory takes in Alouette Lake, Rolley Lake, portions of Fort Langley and Hazelmere, while in the west, the territory follows the height of land north along the mountain range through Pinecone-Burke Mountain Provincial Park to encompass all tributaries of the Pitt River system. The Project area overlaps the southwestern portion of Katzie territory.

3.1 Katzie Aboriginal Interests: Existing Conditions

This section provides a high level of summary of past, present, and desired future use of the proposed Project area and surroundings for traditional purposes that are or may be connected with the exercise of Katzie’s Aboriginal Interests. A more detailed discussion, including sources used, is provided under Katzie First Nation in **Section 10.1.3.2 Existing Conditions**.

3.1.1 General

- Katzie has Aboriginal Interests that are known to overlap or lie in the vicinity of the Project corridor, which includes the Fraser River and other waterways within the Fraser River estuary, including the Nicomekl and Serpentine rivers. Katzie has identified past and ongoing effects that have altered and reduced use over time.

3.1.2 Fishing

- Freshwater clams, Eulachon, sturgeon, sockeye, and dog salmon were fished historically by Katzie in their traditional territory. Sockeye is described as Katzie's most valuable resource.
- Fishing remains central to Katzie. Of the 570 registered members of Katzie, roughly one third of those members is reportedly licenced to fish during openings on the Fraser River. An estimated 120 Katzie vessels use the Fraser River to harvest fish annually. Their fishing area is in the vicinity of their communities.
- Since 2004, Katzie appear to have been licenced to fish in this area for Chinook, sockeye, and chum salmon, steelhead, and eulachon, as well as for chum salmon specifically in the Pitt River, although the targeted species, timing, and frequency have varied year over year.

3.1.3 Hunting/Trapping

- Deer, elk, mountain goat, black bear, some smaller fur-bearing animals (e.g., beaver, marten, mink, raccoon), seals, and waterfowl have been identified by Katzie as hunted in the past.
- Katzie reports that they now have limited areas over which they can still hunt and discharge firearms given land development in their territory. While they still harvest waterfowl on Barnston Island, they currently hunt only on the north and east aspects of the island, having voluntarily stopped the practice on the south side to limit public concerns.

3.1.4 Gathering

- Summer harvest of roots and berries were important for the provision of nutritional and cultural sustenance for Katzie. Harvesting of plants was not restricted to the summer months, often also occurring in fall.
- Seasonally flooded lands in Katzie territory provided them with an abundance of bogs and marsh plants; two of the most important were the cranberry and wapato. Cranberry harvesting areas included the mouth of the Alouette River, around Sturgeon Slough, and at Widgeon Creek. Wapato was reportedly harvested on the flats north of Sturgeon Slough and around Siwash Island on the west bank of Pitt River.
- Other plants identified as traditionally harvested by Katzie include, but are not limited to, bog blueberries, strawberries, salmonberries, blackberries, blackcaps, thimbleberries, red and blue huckleberries, Saskatoons, salal-berries, the fruit of the crab-apple, oso plum, and black haw.
- Katzie reports that they also gathered cedar bark for use in manufacturing clothes and other household items.

3.1.5 Archaeology and Cultural Heritage Interests

- Katzie has previously said that the practice of traditional use, including use and activity areas, spiritual and ceremonial sites, named locations, and cultural landmarks, are all considered to be, in addition to archaeological sites, part of Katzie cultural heritage.
- Katzie has described their landscape as sacred, and the role of harvesting resources within this territory as an important means of strengthening family relations and transmitting knowledge and values to new generations. Katzie has remarked that, as access to their territory declines, each opportunity to continue practicing traditional activities becomes even more significant.

3.1.6 Other Related Interests

Other related interests were not identified for Katzie in the sources reviewed.

4.0 Potential Effects

This section provides a summary of the methodology used to identify potential adverse effects of the proposed Project on the exercise of Aboriginal Interests by Aboriginal Groups during Project construction and operation, followed by a summary of potential effects on Katzie's Aboriginal Interests, specifically. For a more detailed description, refer to **Section 10.1.3.3. Potential Effects**.

4.1 Methodology for Identification of Potential Effects

The first step in the effects assessment on Aboriginal interests was the identification of potential adverse effects on traditional use activities and related interests as a result of Project construction or operation. To evaluate these potential adverse effects, the findings of the following Valued Component (VC) chapters in Part B of the Application were considered, including identified mitigation measures, residual effects, cumulative effects and follow up strategies:

- **Section 4.4 Fish and Fish Habitat**
- **Section 4.6 Marine Mammals**
- **Section 4.7 Vegetation**
- **Section 4.8 Terrestrial Wildlife**
- **Section 5.2 Marine Use**
- **Section 5.3 Land Use**
- **Section 5.5 Visual Quality**
- **Section 6.1 Heritage Resources**
- **Section 7.1 Human Health**

The findings of the following Intermediate Component (IC) chapters were also considered in the assessment:

- **Section 4.1 River Hydraulics and River Morphology**
- **Section 4.2 Sediment and Water Quality**
- **Section 4.9 Air Quality**
- **Section 4.10 Atmospheric Noise**

The assessment of potential adverse effects of the Project on the exercise of Aboriginal Interests, including measures to address those effects, are presented in sections 10.1.3.3 through 10.1.3.5, and largely applies the same methods used in Part B of the Application for the IC and VC assessments, as outlined in Section 3.0 Assessment Methodology.

In addition to information from the VC and IC assessments that support the assessment of potential effects on Aboriginal Interests, information from a Health Impact Assessment (HIA) undertaken to support Project planning, including mitigation recommendations, has been integrated into the assessment of potential effects on Aboriginal Interests. The HIA for the Project can be found at <https://engage.gov.bc.ca/masseytunnel>. A summary of the key findings is provided in **Section 7.2 Health Impact Assessment**.

4.2 Selection of Indicators

Four parameters were chosen as indicators to understand and evaluate potential Project-related effects on the exercise of Aboriginal Interests. The rationale for their selection is presented in the following table.

Table 2 Indicators for the Aboriginal Interests Assessment

| Indicator | Rationale for Selection |
|---|---|
| Access to preferred locations for the exercise of Aboriginal Interests | Project components or activities could result in changes in access to or patterns of travel between traditional use locations on land or water |
| Availability of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in distribution or movement, relative abundance, or habitat area or composition of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |
| Quality of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in the real or perceived quality of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |
| Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests | Project components or activities could result in: (1) direct sensory disturbance to traditional users (e.g., from noise, vibration); and/or (2) indirect changes to cultural practices, customs or traditions – i.e., cultural heritage or the expression and transfer of cultural values or ways of knowing (e.g., language, laws/governance, stories, spiritual beliefs) – tied to the cultural landscape or to the traditional use of specific traditional use locations or resources within that landscape. |

Potential adverse effects on the indicators noted above were analyzed in terms of the type and level of effect that Project components and activities may be expected to have on the exercise of Aboriginal Interests.

For the purposes of this assessment, no effect was understood to mean that no interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests would be expected. Where it was determined that an interaction, and potential effect, could occur, the following definitions were used to guide the characterization of the effect as negligible or measurable:

- Negligible – An interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests may occur, but modifications to the use of preferred options would not be expected.

- Measurable – Modifications to the exercise of Aboriginal Interests at preferred locations or in relation to preferred resources may be needed, and may be considered to be:
 - Minor (minimal or temporary modifications may be required to use preferred options),
 - Moderate (more frequent or longer term modifications may be required to use preferred options), or
 - Serious (permanent or indefinite modifications may be required potentially resulting in the loss of preferred options).

4.3 Identified Potential Effects

As noted above, the first step in evaluating potential adverse effects on Aboriginal Interests was a consideration of the findings for relevant Part B VCs, including identified mitigation measures, residual effects, cumulative effects and follow up strategies. The residual effects with the potential to result in an adverse effect on Aboriginal Interests are then carried forward in the assessment. Using the four indicators noted in the previous section, the potential Project-related effects and level of effect predicted in relation to Katzie’s exercise of Aboriginal Interests, during construction and operation phases, remaining after Part B mitigation are as follows:

Table 3 Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests

| | Construction | | Operation | | Residual Potential Effects |
|---|--------------|------------|------------|------------|----------------------------|
| | Negligible | Measurable | Negligible | Measurable | |
| River locations for traditional use as a result of changes to physical characteristics of these locations | ✓ | | ✓ | | |
| Instream locations for traditional use | ✓ | | ✓ | | |

4.4 Potential Project-Related Effects on Katzie's Aboriginal Interests

Using the methodology presented in **Section 10.1.3.3 Potential Effects**, Table 7 provides the potential incremental Project-related effects, following mitigation of Project-related effects on Part B VCs and ICs as described in Part B, related to Katzie's Aboriginal Interests as summarized in Existing Conditions were identified for construction and operation. A discussion of potential Project-related effects on fishing, hunting/trapping, gathering and archaeology and cultural heritage follows the table.

Table 7 Summary of Potential Project-Related Effects (Construction and Operation Phases)

| Indicator | Potential Project-Related Effect | Potentially-Affected Aboriginal Interests |
|--|---|--|
| Project Construction | | |
| Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified | <ul style="list-style-type: none"> • n/a |

4.5 Fishing

According to Katzie, sockeye is considered their most valuable resource. Katzie also report harvesting clams, eulachon, sturgeon, and dog salmon historically in their traditional territory. Fishing remains central to Katzie, and they report a large proportion of members fish annually in the vicinity of their communities.

The proposed Project has the potential to affect fishing practices through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred fishing locations by Katzie, as a result of changes in river hydraulics or morphology, are expected to be negligible before mitigation. Potential changes in access to instream locations for fishing by Katzie during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to fishing locations by Katzie from instream construction activities are expected to be negligible. While it is acknowledged that Katzie has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Mitigation measures identified in the fish and fish habitat assessment to address Project-related effects on fish are expected to be effective at addressing potential effects on the availability of fishing resources preferred by Katzie. Further, as residual effects on fish identified in the fish and fish habitat assessment are not anticipated to affect population integrity, potential residual effects as a result of Project construction activities, would not be expected to measurably affect the availability of preferred fish resources.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of fishing resources preferred by Katzie; therefore, Potential Project-related effects on Katzie fishing would be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when fishing are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in Section 4.10 Atmospheric Noise are expected to largely address a potential Project-related effect to the quality of experience while fishing. At preferred fishing locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Katzie.

Section 5.5 Visual Quality predicts that residual effects to visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Katzie is fishing. As this landscape has been previously modified, the potential Project-related effect on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Katzie's Aboriginal Interests related to fishing are proposed in Section 10.1.3.4 and summarized below under Mitigation.

4.6 Hunting/Trapping

Katzie reports harvesting a range of wildlife species, including large mammals such as deer and elk, some smaller fur-bearing animals, seals, and waterfowl in the past. Katzie reports that they now have limited areas over which they can still hunt and discharge firearms given land development in their territory.

The proposed Project has the potential to affect hunting and trapping through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred hunting and trapping locations by Katzie as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for hunting and trapping by Katzie during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to hunting and trapping locations by Katzie from instream construction activities, are expected to be negligible. While it is acknowledged that Katzie has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations for hunting and trapping by Katzie resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with hunting and trapping locations.

Mitigation measures identified in the marine mammal and terrestrial wildlife assessments are expected to be effective at addressing potential effects on the availability of hunting and trapping resources preferred by Katzie. Therefore, Project-related effects on hunting and trapping related to potential changes in the availability of resources would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for hunting and trapping by Katzie; therefore, Potential Project-related effects on Katzie fishing would be expected to be negligible.

Project operation is not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when hunting and trapping are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** to address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while hunting and trapping. At preferred hunting and trapping locations, that overlap or are in proximity to known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Katzie.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Katzie is hunting and trapping. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Katzie's Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.7 Gathering

Katzie reports gathering of plants throughout summer and fall. Plants harvested included wapato, a variety of berries and tree fruits and roots for sustenance. Katzie also reports that they also gathered cedar bark for use in manufacturing clothes and other household items.

The proposed Project has the potential to affect gathering through changes in access to preferred locations, changes in availability of preferred resources, changes in quality of preferred resources and changes in quality of experience when gathering.

Potential changes in access to preferred gathering locations by Katzie as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for gathering by Katzie during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to gathering locations by Katzie from instream construction activities, are expected to be negligible. While it is acknowledged that Katzie has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations for gathering by Katzie resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with gathering locations.

Mitigation measures identified in the vegetation assessment to address Project-related effects on terrestrial vegetation are expected to be effective at addressing potential effects on the availability of resources for the exercise of Aboriginal Interests related to gathering. Therefore, Project-related effects on gathering related to potential changes in the availability of vegetation would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for gathering by Katzie; therefore, Potential Project-related effects on gathering related to potential changes in the quality of resources would therefore be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when gathering are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while gathering. At preferred gathering locations that overlap or are in proximity to known noise-sensitive locations for which Project operation-related effects may not be fully mitigable, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Katzie.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Katzie is gathering. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Katzie's Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.8 Archaeology and Cultural Heritage Interests

Katzie reports that archaeological sites and the practice of traditional use, including use and activity areas, spiritual and ceremonial sites, named locations, and cultural landmarks, are part of Katzie cultural heritage. Katzie has described their landscape as sacred, and the role of harvesting resources within this territory as an important means of strengthening family relations and transmitting knowledge and values to new generations.

The proposed Project has the potential to affect Katzie's Aboriginal Interests related to archaeology and cultural heritage through changes in access to preferred locations and changes in quality of experience.

Potential changes in access to locations related to Katzie's archaeological and cultural heritage interests as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations related to Katzie's interests related to archaeology and cultural heritage during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to locations related to Katzie's archaeological and cultural heritage interests from instream construction activities are expected to be negligible. While it is acknowledged that Katzie has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations related to Katzie's archaeological and cultural heritage interests resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works are within the existing Highway 99 right of way and not expected to overlap with locations related to Katzie's archaeological and cultural heritage interests.

With regard to noise, mitigation measures proposed in in **Section 4.10 Atmospheric Noise** would also be expected to address the potential Project-related effect to the quality of experience while undertaking activities related to cultural heritage. At locations related to Katzie’s archaeological and cultural heritage interests that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Katzie.

As reported in **Section 6.1 Heritage Resources**, no archaeological or historical sites were identified within the Project area during fieldwork; however, there may be other locations with intangible cultural value or meaning to Katzie (e.g., spiritual or storied sites, named places) potentially affected by the Project. In addition, physical alterations to the landscape may affect archaeological or historical sites, and how this landscape is experienced culturally.

As a result, mitigation measures proposed in Part B are not expected to address a potential incremental and permanent Project-related effect tied to Katzie’s Aboriginal Interests related to archaeology and cultural heritage that may be associated with the introduction of a new prominent feature to the cultural landscape. As this landscape has been previously modified by anthropogenic changes, the potential incremental Project-related effect on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal, but permanently disruptive for Katzie, who have identified a historical connection to, and continued or desired use of, sites or places that help define the cultural landscape in the Project area.

Additional mitigation to address this potential incremental effect that is not otherwise addressed in the Application is proposed in **Section 10.1.3.4** and summarized below under Mitigation.

5.0 Mitigation

This section provides a summary of mitigation measures identified to address potential Project-related effects on the exercise of Aboriginal Interests by Katzie. For a more detailed discussion, refer to **Section 10.1.3.4 Mitigation**.

Mitigation measures identified for the relevant VCs and ICs in Part B of the Application were reviewed to assess their effectiveness at addressing potential Project-related effects on the exercise of Aboriginal Interests related to those VCs. Examples of mitigation that are proposed in the Application to address potential effects on VCs and ICs, with the potential to result in an effect on Aboriginal Interests, include:

- Avoiding fisheries sensitive timing windows during key Project activities.

- Developing a Marine Access Management Plan to ensure marine use activities, including those supporting Aboriginal Interests, can continue during Project construction.
- Scheduling activities with the potential to generate underwater noise to avoid potential effects on marine mammals.
- Development and implementation of a Terrestrial Vegetation and Wildlife Management Plan with measures to minimize disturbance and loss of vegetation, prevent soil compaction, and minimize clearing in order to minimize effects on vegetation.

These measures are expected to be largely effective at avoiding, reducing, or otherwise managing potential Project-related effects on the exercise of Aboriginal Interests during Project construction and operation.

Recognizing some measurable effects on Katzie's Aboriginal Interests could remain following the application of mitigation to address potential effects on the relevant VCs and ICs in Part B, the following additional measures have been identified to address such effects:

- Ongoing consultation with Katzie regarding proposed measures, management plans, and monitoring programs related to IC and VC assessments; and
- Development of a Cultural Heritage Management Plan.

6.0 Residual Effects

With the implementation of mitigation measures identified in Section 10.1.3.4 and summarized above, residual adverse effects of the proposed Project on the exercise of Aboriginal Interests are expected to be negligible (i.e., not measurable or detectable), and are not further assessed.

7.0 Summary and Conclusion

Part C of the Application builds on consultation undertaken to date to understand Katzie's Aboriginal Interests and provides for an assessment of potential Project-related effects of the Project on Aboriginal Interests.

The Ministry began consultations with Katzie prior to the submission of the Project Description and Key Study Areas which is the end of the Initial Consultation Phase. Both EAO and the Ministry consulted with Katzie during the Pre-Application Phase, which concluded with the submission of the Application. The main concerns expressed by Katzie during consultations include:

- Potential impacts to Katzie First Nation Aboriginal Interests during construction and demolition.

- Capacity funding for Traditional Use Study and to facilitate participation in the Project review process;
- Protection of archaeological and heritage resources and opportunities for cultural recognition and naming;
- Aboriginal participation and Project-related opportunities;
- Effects to fish and fish habitat and Katzie First Nation's access to the Fraser River and the potential to displace fishing vessels;
- Cumulative effects;
- Adequacy of Environmental Assessment (EA) methodology to address social and cultural effects;
- EA Process for the Project and its associated timelines;
- Social effects of the Project on Katzie's ability to transfer knowledge, language and participate in socio-cultural practices;
- Concerns related to dredging, potential for increased vessel traffic and larger vessels resulting from Tunnel decommissioning;
- Potential effects on flow rates after Tunnel removal;
- Potential effects of run off and drainage along the highway corridor, including heavy metal transport from traffic to water and land, management of runoff from the bridge;
- Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations;
- Potential for public safety concerns related to Ice and snow interaction with cable stays crossing the bridge deck and need for appropriate safety/suicide fencing.
- Potential effects of the bridge structure, laydown area, lighting, and noise on terrestrial wildlife, waterfowl, and migratory birds; and
- Inclusion of culturally significant plants in planting plans and opportunity for Katzie in the identification of plants, and planting work. Need for management of invasive plant species.

Based on information provided by Katzie and other publicly-available sources, the Ministry developed a summary of past, present and desired future use of the proposed Project area and its surroundings for the purposes of fishing, hunting/trapping, gathering, archaeology and cultural heritage interests and other related interests.

Relying first on the results of the effects assessments for related VCs and ICs in Part B, the assessment of potential effects of Katzie's Aboriginal Interests considered four indicators:

1. Access to preferred locations for the exercise of Aboriginal Interests;
2. Availability of preferred resources for the exercise of Aboriginal Interests;
3. Quality of preferred resources for the exercise of Aboriginal Interests; and
4. Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests.

As reviewed in Section 10.1.3.3 and Section 10.1.3.4, the mitigation measures, management plans, and monitoring programs identified in Part B of the Application for ICs or VCs linked to the exercise of Aboriginal Interests are expected to be largely effective at addressing the incremental Project-related effects noted above on the exercise of Aboriginal Interests by Katzie First Nation, except in the following potentially measurable cases:

- Project construction:
 - Potential temporary direct (minor) effect on quality of experience related to construction-related noise and a potential temporary indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance
- Project operation:
 - Potential permanent direct (minor) effect on quality of experience related to traffic noise and a potential indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance while engaged in those uses
 - Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses

The following additional measures have been identified to address the above-noted effects:

- Ongoing consultation with Katzie regarding proposed measures, management plans, and monitoring programs related to IC and VC assessments; and
- Development of a Cultural Heritage Management Plan.

With the implementation of mitigation proposed to address potential effects on VCs and ICs, as well as additional mitigation proposed to address potential residual effects on Aboriginal Interests, no effects on the exercise of Aboriginal Interests by Katzie, as a result of the Project, are expected.

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. Environmental Assessment Act (B.C. EAA), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. EAA sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. EAA, and that it requires an EAC.

The Project as proposed is not subject to review under the Canadian Environmental Assessment Act, 2012, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the Environmental Assessment Act.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------------|-------------------------|
| Social and cultural effects and the adequacy of Environmental Assessment (EA) methodology. | <p>Concerns related to the adequacy of Environmental Assessment are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Social and cultural effects of the project are considered in Part C of the Environmental Assessment Application (Application). Where Aboriginal Groups values and perspectives have been provided to the Proponent regarding environmental, economic, social, heritage or health valued components (VCs), they have been incorporated, where applicable into the Part B assessment of those VCs.</p> | Referred to EAO | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------------|--------------------------------------|
| Inclusion in Environmental Assessment Office (EAO) process ensures that Katzie First Nation concerns are addressed. | Noted. | Noted | None |
| Project's EA Process and its associated timelines. Effectiveness and nature of the EA process as well as current volume of EAs underway, | Concerns relating to the EA process and its associated timelines were referred to EAO. EAO issued a memo to members of the Working Group on March 18, 2016 in response to questions and concerns related to the EA process and its associated timelines. The Ministry understands that EAO responded to Katzie's queries regarding the EA Process and associated timelines. | Referred to EAO | None |
| Lack of resources and funding for First Nations communities. | The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. | Addressed | Funding for Application Review Phase |

ABORIGINAL INTERESTS

There are potential Project related impacts to Katzie title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape

Quality of experience while engaged in or tied to traditional use

- cultural landscape

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- Fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

- Quality of experience while engaged in or tied to traditional use
- Changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
 - Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Katzie as a result of the Project are not expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|---|
| <p>Potential impacts to Katzie First Nation title, Rights and culture</p> | <p>Potential Project related impacts to Katzie title, Rights and culture, the level of effect predicted, and mitigation measures are outlined in the Application. The Ministry will continue to meet with Katzie to ensure any effects are minimized.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation of mitigation measures</p> |
| <p>Cumulative effects: Consideration of cumulative effects on Aboriginal rights. Assessment of cumulative effects in regards to the inclusion of other reasonably foreseeable projects and activities. Absence of a comprehensive study of cumulative effects on the Fraser River</p> | <p>The Application will include historical context as outlined relating to changes in use over time by Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by First Nations or was otherwise available from publicly available sources. However, there is no EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests.</p> <p>The Ministry’s cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual)</p> | <p>Addressed</p> | <p>None</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------|-------------------------|
| | <p>cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed. While the Ministry acknowledges that Katzie First Nation is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project.</p> | | |
| <p>“Any work approval within the Katzie First Nation traditional territory is without prejudice to any positions that may be taken by the Katzie First Nation in any litigation or negotiation (including treaty negotiations) and is not intended to define, create, recognize, deny or amend any aboriginal or treaty right within the meaning of sections 25 and 35 of the Constitution Act, 1982.”</p> | <p>Noted</p> | <p>Noted</p> | <p>None</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|---|
| <p>Katzie First Nation’s access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel and the importance of working closely with communities to ensure negative effects are avoided.</p> | <p>Katzie’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A negligible effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation measures outlined in Section 5.2.4</p> |
| <p>Construction and demolition of structures within the Katzie First Nation traditional territory must not impact the ability of community members to participate in traditional activities on the land and water, specifically fishing in and around the Project area.</p> | <p>Katzie’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures outlined in Table 10.3-1 and Section 10.1.3.X, residual effects on the exercise of Aboriginal Interests by Katzie as a result of the Project are not expected.</p> | <p>Addressed in Application</p> | <p>Implementation of measures outlined in Section 10.1.3.4</p> |
| <p>Katzie First Nation requires the joint development of construction and demolition operations and mitigation plans to address this specific issue during the summer and fall fishing season.</p> | <p>The Ministry will consult with Aboriginal Groups in the development of Construction Environmental Management, Construction Traffic Management, Marine Access Management, Health and Safety, and Operation Environmental Management plans.</p> | <p>Addressed</p> | <p>Ongoing consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|---------------------------------|--|
| <p>Adequacy of standard social and cultural impact assessment demonstrating Katzie’s use, occupancy, ties and attachment, and changes to cultural landscapes.</p> | <p>Social effects of the Project on Katzie’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3.8 and Section 10.3 of Part C of the Application.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application</p> |
| <p>Protection of Katzie First Nation’s rights to harvest within the Project area.</p> | <p>Katzie’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife, residual effects on the exercise of Aboriginal Interests by Katzie as a result of the Project are not expected.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife)</p> |

| ABORIGINAL CONSULTATION | | | |
|---|---|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.</p> <p>Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process. | Katzie received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Katzie First Nation as it relates to confidentiality and dissemination. | The Ministry understands and respects that certain information shared by Katzie may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Katzie requests to keep information confidential. | Addressed | Appropriate use of confidential information |
| Funding for Traditional Use Study | The Ministry signed funding agreements with Katzie which provided funding for a Traditional Use Study. | Addressed | None |

ABORIGINAL PARTICIPATION AND PROJECT-RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project’s Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests

Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes

Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns

Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes

Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects

Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.

Incorporate community and traditional knowledge in Project components

Document and report to EAO on the Ministry’s Aboriginal consultation program at times specified by EAO.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------|--|
| Opportunities for cultural recognition and naming. | The Ministry is exploring opportunities for cultural recognition and naming and will to work with Katzie on this matter. | Ongoing | Discussion with Katzie to explore opportunities related to cultural recognition and naming, art and interpretive signage |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|---|
| <p>Project-related employment, training, contracting, and economic development opportunities.</p> <p>Equity and revenue sharing for Aboriginal Groups and importance of initiating related discussions with Aboriginal Groups during the Pre-Application Stage.</p> | <p>The Ministry is committed to working with Katzie to identify potential opportunities to benefit from the Project. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Katzie to identify ways to support community preparedness.</p> | <p>Ongoing</p> | <p>The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful.</p> |
| <p>The Ministry's approach to procurement for the Project will not result in meaningful benefits to Aboriginal Groups.</p> | <p>The Ministry is confident that the process will effectively allow for benefits to be provided to Aboriginal Groups.</p> | <p>Addressed</p> | <p>Ongoing consultation</p> |
| <p>Interest in revenue sharing opportunities from tolling</p> | <p>The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. In accordance with the provincial tolling strategy, revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways.</p> | <p>Addressed</p> | <p>None</p> |

4.1 RIVER HYDRALICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|---|
| Change in flow rates after Tunnel removal. | The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. River Hydraulics and River Morphology are addressed in Section 4.1. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.1.4 |

SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such a turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|---|
| Potential effects of run off and drainage. | The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity in anticipated. No | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|-------------------------|
| | <p>appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | | |
| <p>Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River.</p> | <p>Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> | <p>Addressed in Application</p> | <p>None</p> |

FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

- A negligible effect on the availability of fish resources for traditional use has been determined.
- A negligible effect on quality of fish resources for traditional use has been determined.
- A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

- Avoid effects through Project design.
- Apply best management and environmental management practices.
- Develop Construction Environmental Management and Operational Environmental Management plans.
- Use timing windows for undertaking in-stream works.
- Erosion and sediment control.
- Habitat enhancement and offsetting.

Residual & Cumulative Effects

- There is a low, short-term probability of physical injury or mortality to fish through crushing or entrainment during the construction period.
- No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|--|
| Potential effects to fish and fish habitat and spawning grounds, including species of cultural and economic importance such as eulachon, sturgeon, and salmon. | The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon, and salmon to Katzie and is committed to avoiding or mitigation any potential effects. Fish and Fish Habitat are discussed in Section 4.4. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.4.4 (Fish and Fish Habitat Mitigation Measures) of the Application |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|---|
| Inclusion of mud sharks in baseline studies. | Fish species included in baseline studies were selected based on presence (or potential presence) in the study area and their potential for interaction with the Project. Mud sharks (spiny dogfish) are not known to frequent the Project area. | Addressed | None |
| Fish mortality from pile driving and blasting. | The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. Mitigation, including timing windows for undertaking in-stream work and other measures outline in Project-related Environmental Management Plans, will ensure that potential effects on fish and fish habitat are effectively addressed. Fish mortality should not be a significant issue during pile driving. | Addressed in Application | Implementation of mitigation measures outlined in 4.4.4 (Fish and Fish Habitat Mitigation Measures) |
| Effects of pile driving on salmon migration. | The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. Mitigation, including timing windows for undertaking in-stream work and other measures outline in Project-related Environmental Management Plans, will ensure that potential effects on fish and fish habitat are effectively addressed. Pile driving should not impact salmon migration. | Addressed in Application | Implementation of mitigation measures outlined in 4.4.4 (Fish and Fish Habitat Mitigation Measures) |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon.</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 (Underwater Noise) and 4.4 (Fish and Fish Habitat).</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.3.4 (Underwater Noise Mitigation Measures) and 4.4.4 (Fish and Fish Habitat Mitigation Measures)</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.
 Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan
 Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Katzie has not voiced any specific issues or concerns with respect to Marine Mammals. | | | |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail march that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management.

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|--|
| Invasive plant species and proposed plans to manage presence during construction. | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 (Vegetation Mitigation Measures) |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------|---|
| Inclusion of culturally significant plants in planting plans and opportunity for Katzie in the identification of plants, and planting work. Katzie has the capacity to undertake this type of work. | Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans. | Addressed | The Ministry will develop planting plans with consultation from Aboriginal Groups |

TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|---|
| <p>Potential light and noise effects on wildlife and fish.</p> | <p>The Ministry understands that Katzie Alliance is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 (Terrestrial Wildlife) of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4 (Terrestrial Wildlife Mitigation Measures)</p> |
| <p>Potential effects of the bridge structure on species such as waterfowl and migratory birds.</p> | <p>The Ministry understands that Katzie is concerned with the potential effects of the new bridge on species such as waterfowl and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highway will mitigate potential Project-related increase in traffic collision risk. Nesting opportunity provided by the new bridge will offset the loss of nesting habitat due to removal of the Deas Slough Bridge. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 (Terrestrial Wildlife) of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4 (Terrestrial Wildlife Mitigation Measures)</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|---|
| <p>Impact of laydown areas on terrestrial wildlife.</p> | <p>The Application has been developed with the assumption that all temporary and permanent works will be included within the Project alignment. Potential staging areas that will be made available to the contractor encompass areas within the highway right-of-way that have been previously developed and disturbed.</p> <p>Any temporary or permanent works that are to take place will be subject to applicable permitting requirements, including Water Sustainability Act permitting. Applications for these permits will include detailed descriptions and locations of works to take place.</p> <p>If the contractor chooses to develop staging areas on sites other than those identified, site specific environmental permitting and approvals will be obtained by the contractor.</p> | <p>Addressed</p> | <p>Obtain site specific environmental permits and approvals</p> |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Development of an Air Quality and Dust Control Management Plan for inclusion of the Construction Environmental Management Plan.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Katzie has not voiced any specific issues or concerns with respect to Air Quality. | | | |

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry’s 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|-----------|---|
| Potential impacts of noise from pile driving and blasting. | Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application. | Addressed | Implementation of mitigation measures as outlined in Section 4.3.4 (Underwater Noise Mitigation Measures) and 4.4.4 (Fish and Fish Habitat Mitigation Measures) |

MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

A negligible effect on access to instream locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|--|
| <p>Potential effects of construction during fishing season on fishing activities.</p> | <p>Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction. Mitigation of these effects will include the development and implementation of a specific Katzie marine use protocol through direct consultation with Katzie. Further mitigation can be achieved through the development and implementation of a Marine Access Management Plan for inclusion of the CEMP, establishment of communications protocols, appropriate lighting and marking for safe navigation, and establishment of navigation protection zones during construction.</p> <p>The Ministry understands the importance of working closely with Katzie to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in 5.2.4 (Marine Use Mitigation Measures)</p> |
| <p>Effects of construction and decommissioning-related barging activities on Katzie First Nation fishing activities and on the test fishery.</p> | <p>Potential interference with Katzie fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|-----------------------------|
| <p>Katzie First Nation requires the joint development of construction and demolition operations and mitigation plans to address this specific concern during the summer and fall fishing seasons.</p> | <p>The Ministry understands the significance of fish and fish habitat to Katzie. The Ministry is committed to further discussions with Katzie regarding the Development of a Construction Environmental Management and a Marine Access Management Plan. Fish and Fish Habitat are discussed in Section 4.4.</p> | <p>Addressed</p> | <p>Ongoing consultation</p> |
| <p>Facilitation of barges and larger vessels in the South Arm channel.</p> | <p>The Project will not appreciably increase the size of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the river. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river.</p> | <p>Addressed</p> | <p>None</p> |

LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Address temporary effects on existing land use during construction and incorporate land use considerations into a Traffic Management Plan.

Incorporate land use considerations into a Marine Access Management Plan.

Reconnect recreational trails.

Residual & Cumulative Effects

There is a high, short-term probability of disturbance to residential, commercial and industrial land uses.

There is a high, short-term probability of disturbance to recreational uses near the new bridge.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Katzie has not voiced any specific issues or concerns with respect to Land Use. | | | |

5.5 VISUAL QUALITY

The new bridge will add noticeable visual features to the landscape and will change visual conditions adjacent to the Project alignment. Replacement of interchanges also has the potential to change visual conditions of these locations. At distances greater than one kilometer, the bridge deck will merge with the natural landscape and the main visual features will be the bridge towers. Changes in visual quality at interchanges will be minor as visual quality in such areas is currently influenced by existing transportation infrastructure.

Effects

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Minimize effects through Project design.

Use of vegetated buffers to minimize visual effects to residential developments within close proximity to the bridge in Delta.

Residual & Cumulative Effects

There is a moderate, long-term probability of disturbance to visual quality.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Katzie has not voiced any specific issues or concerns with respect to Visual Quality | | | |

HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a change find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|---|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites. Protection of cultural and archaeological sites that are known to exist or may be discovered within the Project area.</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Katzie. All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment. Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|-----------|---|
| Participation in archaeological fieldwork and review of archaeological draft reports | Katzie participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports. | Addressed | Katzie will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports. |
| Concern that the Ministry's archaeological consultant will not work effectively with Aboriginal Groups based on experience on past projects | The Ministry worked with Katzie to resolve this concern. | Addressed | None |

HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible adverse effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible direct effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

During construction, a measureable effect on access to instream locations for traditional use has been determined.

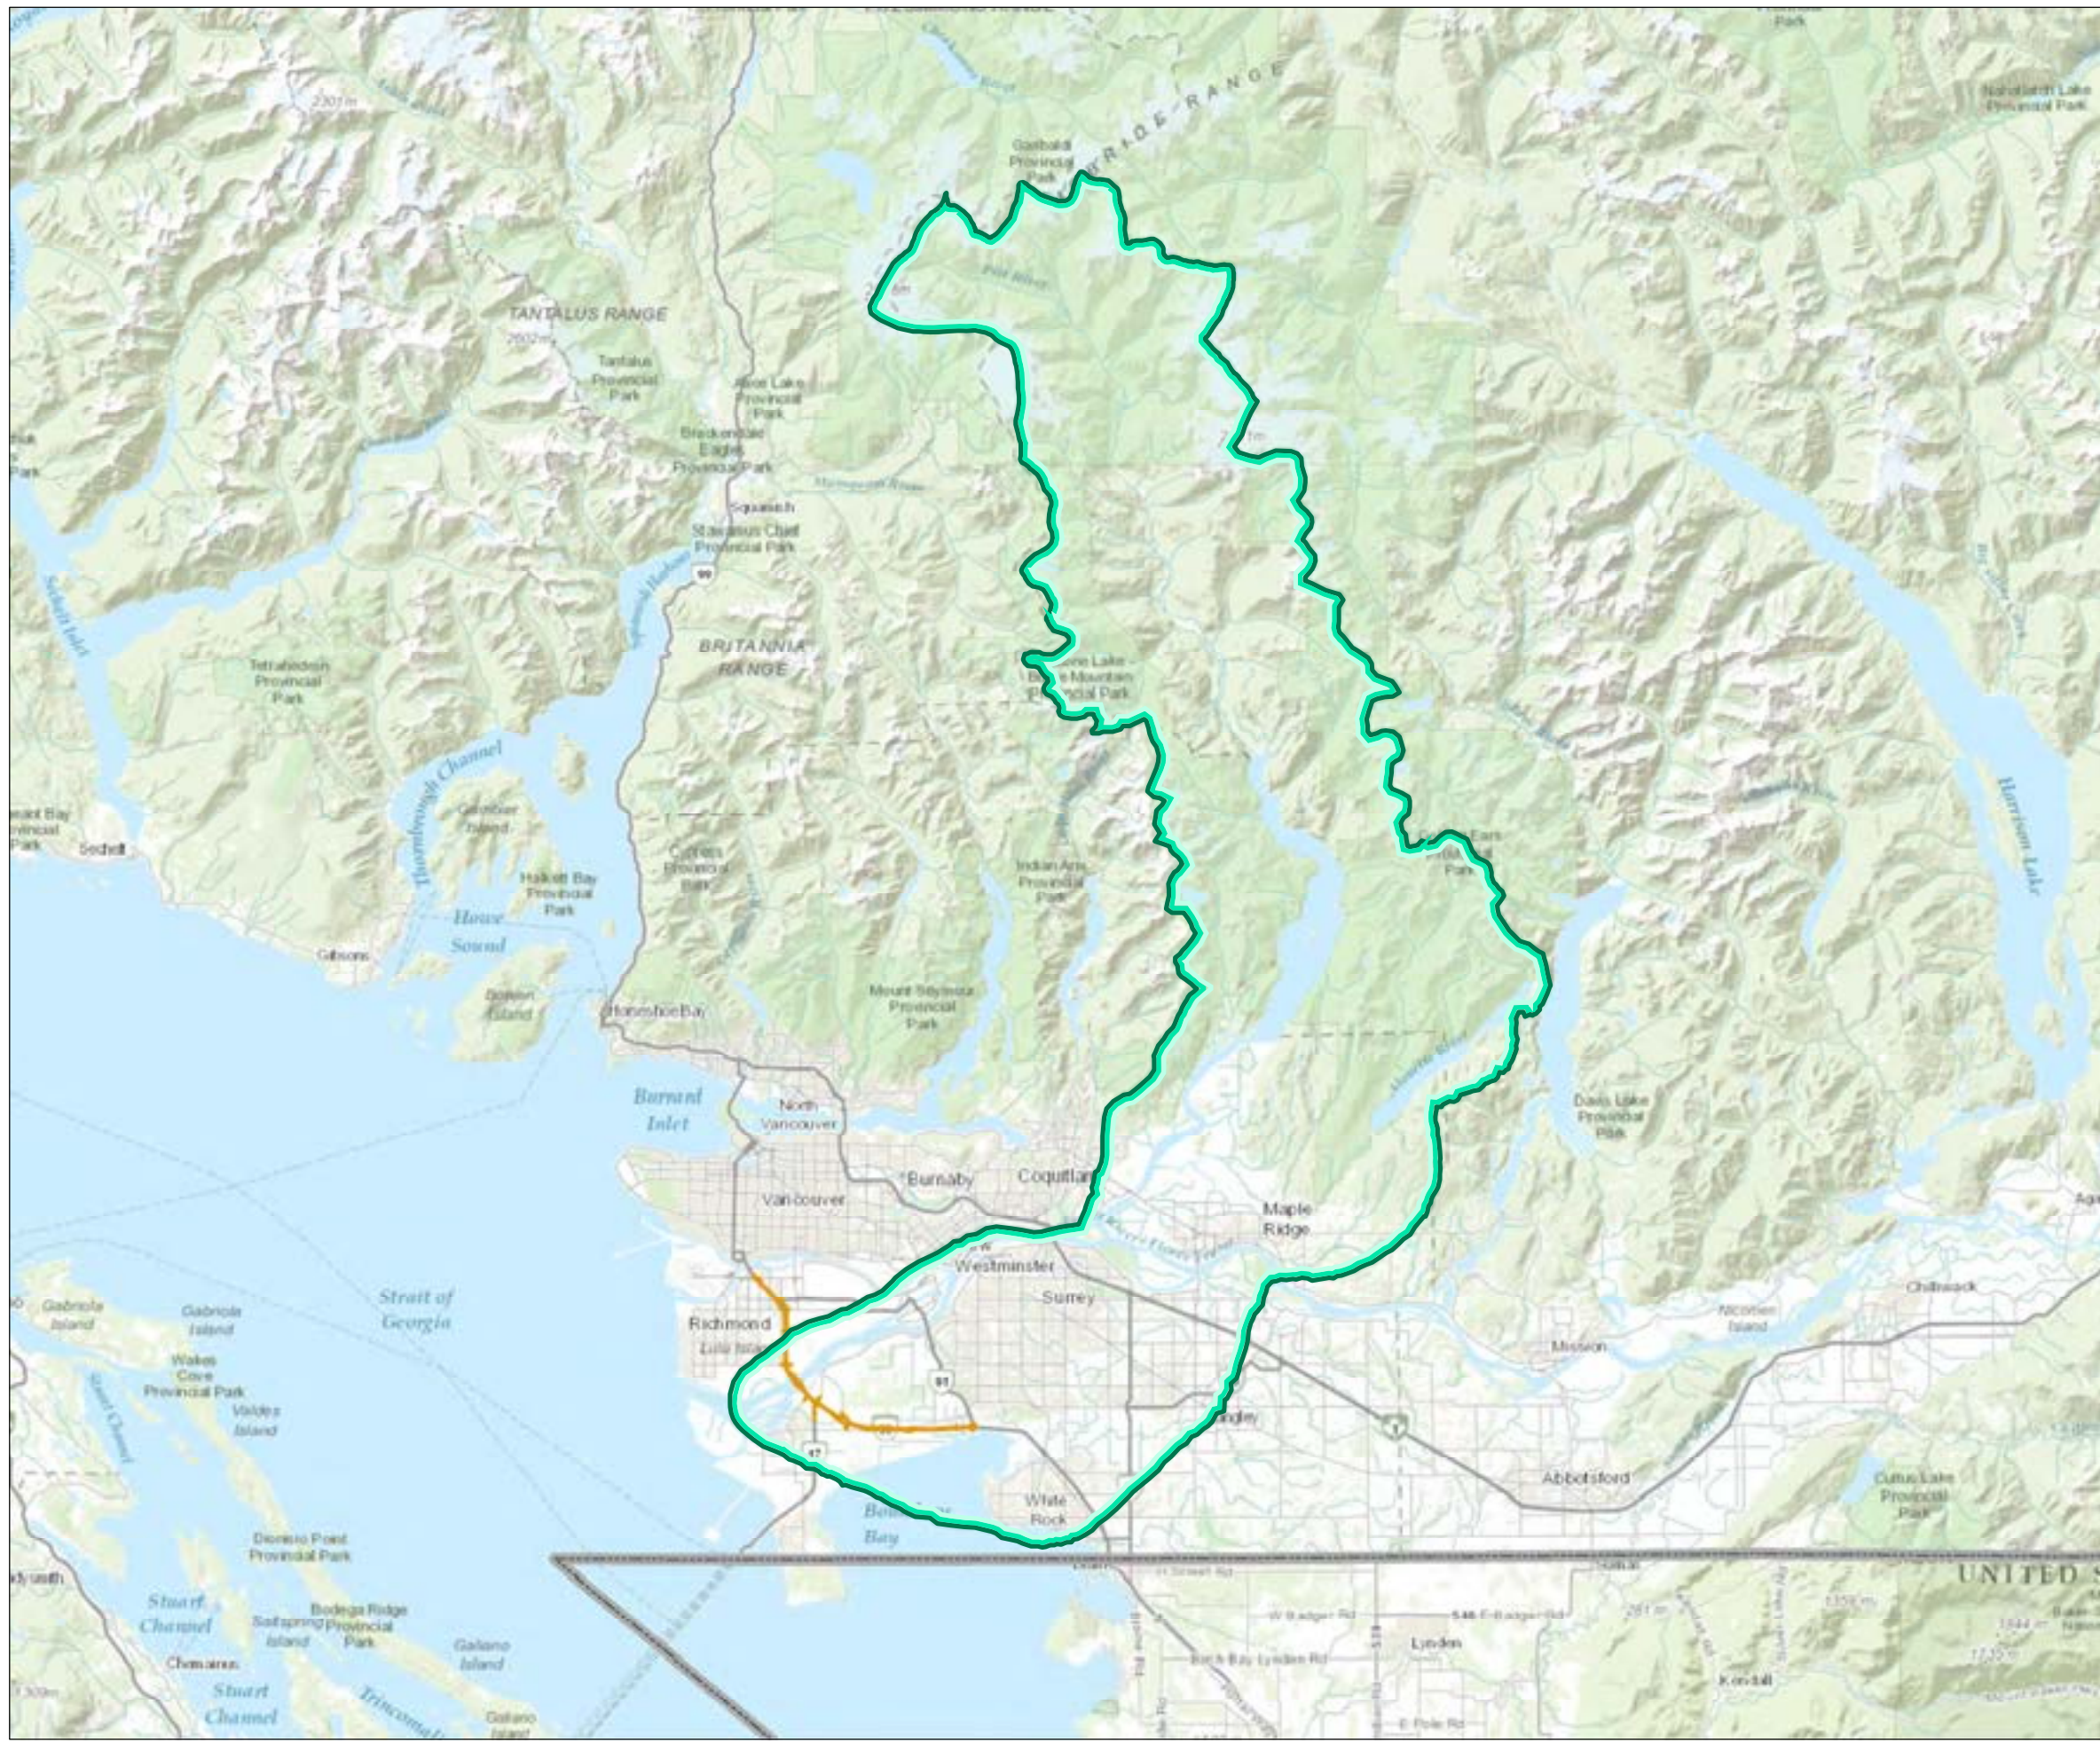

| HUMAN HEALTH | | | |
|---|--|---------------------------------|---|
| <p>During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.</p> <p>During operation, a negligible effect on access to instream locations for traditional use has been determined.</p> <p>During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.</p> <p>A negligible effect on access to upland locations for traditional use has been determined.</p> <p>A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.</p> <p><u>Mitigation</u></p> <p>Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.</p> <p>Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.</p> <p><u>Residual & Cumulative Effects</u></p> <p>No significant Project-related residual or cumulative effects on human health are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| <p>Katzie First Nation has experience with the Golden Ears Bridge being in proximity to the community and with the issue of suicide. Concern that there will be appropriate safety/suicide fencing on the new structure and importance of considering how the new bridge could facilitate suicide.</p> | <p>The Ministry is in the process of developing a policy in which new bridges in the Lower Mainland will require the installation of safety barriers. The Ministry is committed to including safety barriers as part of the design of the new bridge and will continue to discuss additional measures with Katzie First Nation.</p> <p>Assessment of potential Project-related effects on human health, including community and social factors, are presented in Section 7.1 of the Application.</p> | <p>Addressed in Application</p> | <p>Development of safety barrier policy for new bridges in the Lower Mainland.</p> <p>Implementation of mitigation measures outlined in Section 7.1</p> |

| ACCIDENTS AND MALFUNCTIONS | | | |
|--|---|---------------|--|
| <p>Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.</p> <p>In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | An Emergency Response and Spill Contingency Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills | Addressed | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |

| OTHER ISSUES | | | |
|--|---|--------------------------|--|
| Consultation with Katzie First Nation identified issues outside of the environmental assessment process, Aboriginal Interests, Aboriginal Consultation, Aboriginal Participation and Project-Related Opportunities, and sections of the Application. | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Length of time tolls are in place | The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application. | Addressed | None |
| Potential for falling snow and ice | The design of the new bridge is similar to the Alex Fraser Bridge, with cable stays on the outside of the span. There are no cables crossing the deck. The Project design will include snow and ice control measures. | Addressed | Snow and ice control measures in Project design. |
| Congestion at Richmond-Vancouver border | Traffic analysis shows that approximately 60 per cent of northbound morning Tunnel traffic is destined to Richmond, and that traffic volumes at the Oak Street and Knight Street bridges have been declining since 2010. While Oak Street is likely to remain congested due to signal lights at Oak Street and 70th Avenue in Vancouver, the Project is not expected to result in more traffic | Addressed in Application | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|--|
| | <p>driving over Oak Street Bridge each day. The new replacement bridge and the Highway 99 improvements will increase the convenience of accessing transit and provide an efficient route to the Canada Line stations in Richmond for commuters continuing to Vancouver. Traffic is addressed in Section 5.1 of the Application.</p> | | |
| <p>Potential for contaminants in the Tunnel and how this may affect Tunnel decommissioning.</p> | <p>The Ministry will consult with Fisheries and Oceans Canada and Port Metro Vancouver regarding Tunnel decommissioning, and will incorporate the requirements of these agencies in the planning and implementation of decommissioning activities.</p> <p>If potentially hazardous building materials are identified in the Tunnel, a detailed plan for removing and appropriately disposing of such material will be developed prior to initiating decommissioning activities. Any potentially hazardous material identified will be managed in accordance with applicable legislation, including the B.C. Hazardous Waste Regulation, B.C. Reg. 63/88, and the Workers' Compensation Board of B.C. Occupational Health and Safety Regulation, B.C. Reg. 296/97.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.1.4 and 4.2.4</p> |

APPENDIX F

Kwantlen First Nation

1.0 Introduction

This appendix provides a summary of the information presented in Part C Aboriginal Consultation (Part C) of the Application for an Environmental Assessment Certificate (the Application) regarding the assessment of effects on Aboriginal Interests. Aboriginal Interests are defined as asserted or determined Aboriginal rights, including title, or treaty rights. This appendix presents the information specific to Kwantlen First Nation (Kwantlen).

The organization of the information presented generally follows Part C and includes the following sections:

- Consultation;
- Community Profile;
- Existing Conditions;
- Potential Effects;
- Mitigation;
- Residual Effects; and
- Summary and Conclusion.

For more detailed information on the effects assessment on Aboriginal Interests related to Kwantlen, refer to the following sections of Part C:

- Consultation with Kwantlen (**Section 10.1.2.10**);
- Kwantlen community profile (**Section 10.1.1.4**);
- Description of existing Kwantlen's Aboriginal Interests (**Section 10.1.3.2**);
- Assessment of potential effects of the Project on the exercise of Kwantlen's Aboriginal Interests (**Section 10.1.3.3**);
- Mitigation relating to potential effects on Aboriginal Interests (**Section 10.1.3.4**); and
- Residual effects on Kwantlen's Aboriginal Interests following application mitigation (**Section 10.1.3.5**).

A summary of Aboriginal Interests Assessment for Kwantlen is also provided in **Section 10.1.3.8**.

The summary presented in this appendix also incorporated information found in the Kwantlen First Nation Overview Table (**Appendix F2**), which provides detailed information regarding:

- Kwantlen issues and concerns identified to date;
- Identification of potential effects on VCs and ICs that relate to the assessment of effects on Kwantlen's Aboriginal Interests;
- The Ministry's response to specific issues and concerns raised by Kwantlen;
- The status of these issues and concerns; and
- Next steps required to address outstanding issues and concerns.

2.0 Consultation

This section provides information regarding the consultation activities that the EAO and Ministry carried out prior to submission of the Application.

2.1 EAO-led Consultation Activities

2.1.1 Capacity Funding

When a provincial agency is a proponent of a project going through a provincial EA under the British Columbia *Environmental Assessment Act* (BCEAA), that agency provides funding to Aboriginal Groups to support their involvement in pre-Application and Application review phases in place of EAO providing such funding. The Ministry's provision of capacity funding is discussed in the following section, Proponent-led Consultation Activities.

2.1.2 Participation in Working Group

EAO invited Kwantlen and all other Aboriginal groups identified in Schedule B of the Section 11 Order to participate as members of a Working Group.

During the Pre-Application stage, Kwantlen attended two EAO-led Working Group meetings where the Ministry presented information on the Project and the environmental assessment process and received and responded to comments on those presentations.

The first Working Group meeting, held January 2016, focused on the environmental assessment process, Project overview and update, Key Areas of Study, draft Application Information Requirements overview, and preliminary conclusions from study results.

The second working group meeting, held March 2016, focused on the environmental assessment process, list of materials available on the Project website, review of comments received on, and resulting changes to, the draft Application Information Requirements, and a description and rationale of the assessment areas. Working Group comments raised by Kwantlen in relation to the draft Application Information Requirements resulted in Aboriginal Groups being invited to participate in river-otter related fieldwork in April 2016. The objectives of this work were to document river otter presence or potential presence with the Regional Assessment Area, document and describe use of riparian and high use areas and identify potential Project-related effects.

Kwantlen also participated in the completeness review of the Application that considered whether the Application included information requirements set out in the Application Information Requirements.

It is anticipated that Kwantlen will continue as an active member of the Working Group through the environmental assessment process.

2.2 Proponent-led Consultation Activities

The Ministry began consultation with Kwantlen in early 2014 in order to identify the nature and scope of Kwantlen's Aboriginal Interests and how they might be impacted by the Project. Following is a summary of consultation activities led by the Ministry with Kwantlen. A more detailed discussion is provided under the Kwantlen section in **Section 10.1.2.10 Overview of consultation with each Schedule B Aboriginal Groups**. The following sections represent the main activities undertaken in support of Proponent-led consultation and include the following:

- Provision of capacity funding;
- Traditional use, traditional knowledge and other studies;
- Examples of Consultation Activities; and
- Concerns Identified to Date.

2.2.1 Capacity Funding

The Ministry entered into a Participation Funding Agreement, including the Initial Consultation and Pre-Application phases for consultation, with Kwantlen. The Ministry has been working with Kwantlen regarding their needs for capacity funding to facilitate their participation in the Application Review Phase. Consultation activities that are anticipated to be undertaken during the Application Review phase that will be supported by capacity funding include participation in technical reviews and analyses, involvement in ongoing consultation activities, and presentation of key information regarding their respective Aboriginal Interests.

2.2.2 Traditional Use, Traditional Knowledge & Other Studies

The Ministry provided additional funding to Kwantlen for the preparation and submission of the traditional use study *Kwantlen Land Use and Occupation in the Vicinity of Highway 99*. The purpose of such studies is to identify Aboriginal input and traditional knowledge for inclusion and consideration in the EA. In addition, studies were funded to enhance the Ministry's understanding of Aboriginal Interests and Aboriginal Group's past, present and desired future use as it pertains to the exercise of Aboriginal Interests within the Project area and the potential adverse effects on identified Aboriginal Interests.

2.2.3 Examples of Consultation Activities

A number of consultation activities were undertaken with Kwantlen during both the Initial Consultation Phase and the Pre-Application Consultation Phase as follows:

Initial Consultation Phase Activities - The Ministry recognized the importance and value of early engagement with Schedule B Aboriginal Groups and undertook an Initial Consultation Phase prior to the Pre-Application Phase. The Initial Consultation Phase concluded in December 16, 2015 with submission of the Project Description and Key Areas of Study document. The focus of the Initial Consultation Phase was collection of baseline information and sharing of draft EA-related documents (i.e. Project Description and Key Areas of Study, draft Application Information Requirements (AIR)). The main consultation activities the Ministry undertook with Kwantlen included:

- Sharing of Project-related information including focused presentation on topics on interest and/or concern to Kwantlen;
- Funding for Kwantlen's participation in Project consultation activities and EA process;
- Kwantlen participation in field studies;
- Site visit;
- Review of draft EA documents such as the Project Description and Key Areas of Study, Heritage Resources Overview Assessment/Archaeological Overview Assessment, Heritage Resources Assessment, draft AIR and Aboriginal Consultation Plan;
- Meetings with Kwantlen leadership, staff, consultants, elders and membership; and
- Response and follow up with Kwantlen regarding the identification and resolution of issues.

Pre-Application Consultation Phase Activities - The Pre-Application Consultation Phase began with the filing of the Project Description and Key Areas of Study on December 16, 2015 and concluded with the submission of the Application. This phase included the issuance of the Section 11 Order, AIR development and collection of baseline information. The main consultation activities the Ministry undertook with Kwantlen included:

- Sharing of Project-related information including focused presentation on topics on interest and/or concern to Kwantlen;
- Funding for Kwantlen’s participation in Project consultation activities and EA process;
- Meetings with Kwantlen leadership, staff, consultants, elders and membership;
- Kwantlen participation in fieldwork;
- Kwantlen participation in the EA Working Group;
- Review of draft EA documents such as the Application Information Requirements, Aboriginal Consultation Plan, and Aboriginal Consultation Reports; and
- Response and follow up with Kwantlen regarding the identification and resolution of issues.

2.2.4 Concerns Identified to Date

As outlined above, Kwantlen’s concerns, identified through consultation undertaken to-date, are presented in **Appendix F2 Kwantlen First Nation Overview Table**. The Ministry’s response to Kwantlen’s key concerns regarding potential impacts on Kwantlen’s Aboriginal Interests are outlined below:

Table 1 Concerns Identified to Date

| Concerns Identified to Date | Response |
|--|--|
| Protection of Kwantlen First Nation’s rights to harvest within the Project area. | Kwantlen’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife, residual effects on the exercise of Aboriginal Interests by Kwantlen as a result of the Project are not expected. |
| Aboriginal participation and Project-related opportunities <ul style="list-style-type: none"> • Potential employment, training, contracting and economic development opportunities • Cultural recognition and naming | The Ministry is committed to working with Kwantlen to identify potential employment, training, contracting and economic development opportunities and to identify ways to support community preparedness. The Ministry is exploring opportunities for cultural recognition and naming and will work with Kwantlen on these opportunities. |
| Ministry’s approach to procurement for the Project will not result in meaningful benefits to Aboriginal Groups | The Ministry is confident that the Project’s procurement process will effectively allow for benefits to be provided to Aboriginal Groups. |

| Concerns Identified to Date | Response |
|---|--|
| <p>Effects to fish and fish habitat</p> <ul style="list-style-type: none"> • Importance of fish and fish habitat including species of cultural and economic importance such as eulachon, sturgeon and salmon • Potential effects of pile driving, blasting and underwater noise generated by Tunnel decommissioning and other construction activities | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon, salmon to Kwantlen and is committed to avoiding or mitigating any potential effects.</p> <p>The Ministry designed a clear span bridge over the Fraser River South Arm and Deas Slough to avoid or minimize Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Kwantlen’s Fisheries Department continues to be very helpful in the review of Green Slough concepts.</p> <p>As outlined in Section 4.3 (Underwater Noise), sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources will be effectively mitigated by scheduling activities during period of low tide, when work can be completed under shallow water conditions or in the dry.</p> |
| <p>Access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel and the importance of working closely with communities to ensure negative effects are avoided.</p> | <p>Kwantlen’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A negligible direct effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined. Mitigation measures are outlined in Section 5.2.4 (Marine Use Mitigation Measures) of the Application.</p> |

| Concerns Identified to Date | Response |
|---|---|
| <p>Environmental Assessment (EA):</p> <ul style="list-style-type: none"> Adequacy of methodology to address social and cultural effect | <p>The Ministry acknowledges the importance of Kwantlen’s involvement in the environmental assessment process.</p> <p>Kwantlen’s concerns related to Environmental Assessment including the adequacy of methodology to address social and cultural effects underway is outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> |
| <p>Social effects of the Project on Kwantlen’s ability to transfer knowledge, language and participate in socio-cultural practices</p> | <p>Social effects of the Project on Kwantlen’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3 and Section 10.3 of Part C of the Application.</p> |
| <p>Potential effects on Fraser River flow rates after Tunnel removal</p> | <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Flow rates are discussed in Section 4.1 (River Hydraulics).</p> |

| Concerns Identified to Date | Response |
|---|---|
| Potential effects of run off and drainage | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation.</p> <p>During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.</p> <p>Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will ensure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected.</p> <p>Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> |

3.0 Community Profile: Kwantlen First Nation

Kwantlen First Nation is governed by a chief and council under a custom electoral system. The current chief and two councillors were appointed in November 1993.

Kwantlen's main community resides on McMillan Island 6, in the Fraser River to the north of Fort Langley. Of 269 registered members, 70 live on reserve, of which the Kwantlen have six, including McMillan Island 6, all centered on the area of confluence between the Stave River and the Fraser River. Kwantlen also share the *Pekw'Xe:y/les* (Peckquaylis) reserve, approximately 2 km upstream of the Mission Bridge, with 20 Stó:lō nations. None of these reserves overlap the proposed Project area.

Kwantlen traditional territory has been previously shown to extend from the watershed of the Stave River in the north to the international border in the south, taking in the northeastern part of Boundary Bay, the Serpentine, Nicomekl, and Salmon Rivers, as well as the Fraser River upstream of Tilbury Island to the Nicomen Slough, near Chilliwack. This territory overlaps the portion of the Project area at its westernmost extent (i.e., between Highway 17 and Highway 91), but does not overlap the Project area at or north of the Fraser River.

Since 2011, the economic arm of the Kwantlen First Nation has operated as Seyem' Qwantlen Business Group, representing five limited partnerships owned by the Nation, and providing services principally in the areas of contracting (construction, excavation, and earthworks), on and off reserve land development, and resource management (fisheries, forestry, archaeology).

3.1 Kwantlen Aboriginal Interests: Existing Conditions

This section provides a high level of summary of past, present, and desired future use of the proposed Project area and surroundings for traditional purposes are or may be connected with the exercise of Kwantlen's Aboriginal Interests. A more detailed discussion, including sources used, is provided under Kwantlen in **Section 10.1.3.2 Existing Conditions**.

3.1.1 General

- Kwantlen has Aboriginal Interests that are known to overlap or lie in the vicinity of the Project corridor, which includes a portion of the South Arm of the Fraser River.

3.1.2 Fishing

- Kwantlen First Nation consider the vitality of the Fraser River and its resources to be an important element of Kwantlen culture. Salmon was and remains a primary resource and is the basis of Kwantlen's economy.

- Kwantlen are among the numerous First Nations involved in the Lower Fraser River salmon fishery under food, social and ceremonial (FSC) licences issued by Fisheries and Oceans Canada (DFO).
- Kwantlen are typically licenced to fish for FSC purposes in the stretch of the Fraser River between the Port Mann Bridge and Mission, using both drift and set nets (DFO 2016); and appear to fish in this area for Chinook, sockeye, and chum salmon and eulachon.
- Fishing remains central to Kwantlen, and they have also reported use of the upper intertidal area of Mud Bay, at the northeastern aspect of Boundary Bay, for shellfish harvesting.

3.1.3 Hunting/Trapping

- Kwantlen reportedly hunted deer, elk, mountain goats and other small game (e.g., ducks, geese, and grouse), and trapped beaver and martin.
- Stave River, a tributary of the Fraser River, is said to have been important to Kwantlen for hunting and trapping and as a training area for youth.

3.1.4 Gathering

- Kwantlen have identified a former berry/plant (specifically cranberry) gathering area at a bog located in the eastern and northern portion of Lulu Island, along the south bank of the North Arm of the Fraser River.

3.1.5 Archaeology and Cultural Heritage Interests

- Kwantlen have identified several traditional transportation routes to the east of the project corridor, including, but not limited to:
 - a trail from the head of Mud Bay to the South Arm of the Fraser and to *Kikait* (*q'əq'yət*), across from New Westminster;
 - a trail/canoe route leading from the Fraser River at the west end of Barnston Island to the Serpentine River, leading to Mud Bay;
 - a trail/canoe route from the Fraser River along the Salmon River then overland to the Serpentine River, leading to Mud Bay;
 - the Nicomekl River itself (*neq'əmeqəl* and other variations);
 - a trail/canoe/portage route from the mouth of the Salmon River at the Fraser River to its source, then by portage to the upper forks of the Nicomekl River, and downriver to the mouth of the Nicomekl River (i.e., Black Spit or *stetaq*); and
 - a trail leading from the headwaters of the Nicomekl River southward across Langley Prairie to Campbell River, then following this river to its mouth at Semiahmoo Bay.

- Kwantlen have reported that they understand their cultural heritage sites to include “any geographically-defined site (on land or water) used for the purposes of settlement, occupation, cultural use, resource gathering, transportation, or similar activity,” and note that while these sites “may lack the physical evidence of human-made artifacts or structures,” they are still of cultural significance (Kwantlen First Nation 2015).
- Kwantlen say that some of the “most highly significant” cultural heritage sites are associated with fishing on the Fraser River (Kwantlen First Nation 2015).

3.1.6 Other Related Interests

- No other related interests in addition to those summarized above were identified from *Kwantlen Land Use and Occupation in the Vicinity of Highway 99* or in publicly available sources reviewed for the Project.

4.0 Potential Effects

This section provides a summary of the methodology used to identify potential adverse effects of the proposed Project on the exercise of Aboriginal Interests by Aboriginal Groups during Project construction and operation, followed by a summary of potential effects on Kwantlen’s Aboriginal Interests, specifically. For a more detailed description of the methodology and a summary of the results, refer to **Section 10.1.3.3. Potential Effects**.

4.1 Methodology for Identification of Potential Effects

The first step in the effects assessment on Aboriginal interests was the identification of potential adverse effects on traditional use activities and related interests as a result of Project construction or operation. To evaluate these potential adverse effects, the findings of the following Valued Component (VC) chapters in Part B of the Application were considered, including identified mitigation measures, residual effects, cumulative effects and follow up strategies:

- **Section 4.4 Fish and Fish Habitat**
- **Section 4.6 Marine Mammals**
- **Section 4.7 Vegetation**
- **Section 4.8 Terrestrial Wildlife**
- **Section 5.2 Marine Use**
- **Section 5.3 Land Use**
- **Section 5.5 Visual Quality**
- **Section 6.1 Heritage Resources**
- **Section 7.1 Human Health**

The findings of the following Intermediate Component (IC) chapters were also considered in the assessment:

- **Section 4.1 River Hydraulics and River Morphology**
- **Section 4.2 Sediment and Water Quality**
- **Section 4.9 Air Quality**
- **Section 4.10 Atmospheric Noise**

The assessment of potential adverse effects of the Project on the exercise of Aboriginal Interests, including measures to address those effects, are presented in **Section 10.1.3.3** through **Section 10.1.3.5**, and largely applies the same methods used in Part B of the Application for the IC and VC assessments, as outlined in **Section 3.0 Assessment Methodology**.

In addition to information from the VC and IC assessments that support the assessment of potential effects on Aboriginal Interests, information from a Health Impact Assessment (HIA) undertaken to support Project planning, including mitigation recommendations, has been integrated into the assessment of potential effects on Aboriginal Interests. The HIA for the Project can be found at <https://engage.gov.bc.ca/masseytunnel>. A summary of the key findings is provided in **Section 7.2 Health Impact Assessment**.

4.2 Selection of Indicators

Four parameters were chosen as indicators to understand and evaluate potential Project-related effects on the exercise of Aboriginal Interests. The rationale for their selection is presented in the following table.

Table 2 Indicators for the Aboriginal Interests Assessment

| Indicator | Rationale for Selection |
|---|---|
| Access to preferred locations for the exercise of Aboriginal Interests | Project components or activities could result in changes in access to or patterns of travel between traditional use locations on land or water |
| Availability of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in distribution or movement, relative abundance, or habitat area or composition of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |
| Quality of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in the real or perceived quality of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |
| Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests | Project components or activities could result in: (1) direct sensory disturbance to traditional users (e.g., from noise, vibration); and/or (2) indirect changes to cultural practices, customs or traditions – i.e., cultural heritage or the expression and transfer of cultural values or ways of knowing (e.g., language, laws/governance, stories, spiritual beliefs) – tied to the cultural landscape or to the traditional use of specific traditional use locations or resources within that landscape. |

Potential adverse effects on the indicators noted above were analyzed in terms of the type and level of effect that Project components and activities may be expected to have on the exercise of Aboriginal Interests.

For the purposes of this assessment, no effect was understood to mean that no interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests would be expected. Where it was determined that an interaction, and potential effect, could occur, the following definitions were used to guide the characterization of the effect as negligible or measurable:

- Negligible – An interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests may occur, but modifications to the use of preferred options would not be expected.

- Measurable – Modifications to the exercise of Aboriginal Interests at preferred locations or in relation to preferred resources may be needed, and may be considered to be:
 - Minor (minimal or temporary modifications may be required to use preferred options),
 - Moderate (more frequent or longer term modifications may be required to use preferred options), or
 - Serious (permanent or indefinite modifications may be required potentially resulting in the loss of preferred options).

4.3 Identified Potential Effects

As noted above, the first step in evaluating potential adverse effects on Aboriginal Interests was a consideration of the findings for relevant Part B VCs and ICs, including identified mitigation measures, residual effects, cumulative effects and follow up strategies. The residual effects with the potential to result in an adverse effect on Aboriginal Interests are then carried forward in the assessment. Using the four indicators noted in the previous section, the potential Project-related effects and level of effect predicted in relation to Kwantlen's exercise of Aboriginal Interests remaining after Part B mitigation are as follows:

Table 3 Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests

| | Construction | | Operation | | Residual Potential Effects |
|---|--------------|------------|------------|------------|----------------------------|
| | Negligible | Measurable | Negligible | Measurable | |
| River locations for traditional use as a result of changes to physical characteristics of these locations | ✓ | | ✓ | | |
| Instream locations for traditional use | ✓ | | ✓ | | |
| Upland locations for traditional use | ✓ | | ✓ | | |

Table 4 Changes in Availability of Preferred Resources for the Exercise of Aboriginal Interests

| | Construction | | Operation | | Residual Potential Effects |
|--|--------------|------------|------------|------------|----------------------------|
| | Negligible | Measurable | Negligible | Measurable | |

| | Negligible | Measurable | Negligible | Measurable | |
| Ground-borne vibration | ✓ | | ✓ | | |
| Cultural landscape | | ✓ | | ✓ | <p>Construction - Potential temporary indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance</p> <p>Operation - Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses.</p> |

4.4 Potential Project-Related Effects on Kwantlen's Aboriginal Interests

Using the methodology presented in **Section 10.1.3.3 Potential Effects**, Table 7 provides the potential incremental Project-related effects, following mitigation of Project-related effects on Part B VCs and ICs as described in Part B, related to Kwantlen's Aboriginal Interests as summarized in Existing Conditions were identified for Project Construction and Operation. A discussion of potential Project-related effects on fishing, hunting/trapping, gathering and archaeology and cultural heritage follows the table.

Table 7 Summary of Potential Project-Related Effects

| Indicator | Potential Project-Related Effect |
|--|---|
| Project Construction | |
| Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Availability of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Experience in Exercising, or tied to the Exercise, of Aboriginal Interests | <ul style="list-style-type: none"> • Potential temporary direct (minor) effect on quality of experience related to construction-related noise • Potential temporary indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance |
| Project Operation | |
| Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Availability of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Experience in Exercising, or tied to the Exercise, of Aboriginal Interests | <ul style="list-style-type: none"> • Potential indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance while engaged in those uses • Potential permanent direct (minor) effect on quality of experience related to traffic noise • Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses |

4.5 Fishing

According to Kwantlen, fishing is the most frequently practiced resource harvesting activity by its members on the Fraser River, with salmon being the key species. Other species of interest harvested throughout their traditional territory include eulachon, herring, smelt, halibut, eulachon, trout, and sturgeon. Kwantlen also reports harvesting a variety of bivalves and other seafood. Kwantlen are typically licenced to fish for FSC purposes in the stretch of the Fraser River between the Port Mann Bridge and Mission, and also appear to fish in this area for Chinook, sockeye, and chum salmon and eulachon.

The proposed Project has the potential to affect fishing practices through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred fishing locations by Kwantlen, as a result of changes in river hydraulics or morphology, are expected to be negligible before mitigation. Potential changes in access to instream locations for fishing by Kwantlen during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to fishing locations by Kwantlen from instream construction activities are expected to be negligible. While it is acknowledged that Kwantlen has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Mitigation measures identified in the fish and fish habitat assessment to address Project-related effects on fish are expected to be effective at addressing potential effects on the availability of fishing resources preferred by Kwantlen. Further, as residual effects on fish identified in the fish and fish habitat assessment are not anticipated to affect population integrity, potential residual effects as a result of Project construction activities, would not be expected to measurably affect the availability of preferred fish resources.

Mitigation measures identified in the assessments in Section 4.2 Sediment and Water Quality and Section 4.9 Air Quality are expected to be effective at addressing potential effects on the quality of fishing resources preferred by Kwantlen; therefore, Potential Project-related effects on Kwantlen fishing would be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when fishing are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** are expected to largely address a potential Project-related effect to the quality of experience while fishing. At preferred fishing locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Kwantlen.

Section 5.5 Visual Quality predicts that residual effects to visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Kwantlen is fishing. As this landscape has been previously modified, the potential Project-related effect on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Kwantlen's Aboriginal Interests related to fishing are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.6 Hunting/Trapping

Kwantlen report harvesting a range of wildlife species, including mammals such as deer and elk and a number of species of wildfowl. Harvesting has taken place on the river banks, marshes, and meadows throughout the Fraser delta including the foreshore areas adjacent to the Kwantlen reserve on Canoe Pass and those adjacent to Tsawwassen Lands. Kwantlen reportedly hunted deer, elk, mountain goats and other small game (e.g., ducks, geese, and grouse), and trapped beaver and martin.

The proposed Project has the potential to affect hunting and trapping through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred hunting and trapping locations by Kwantlen as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for hunting and trapping by Kwantlen during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to hunting and trapping locations by Kwantlen from instream construction activities, are expected to be negligible. While it is acknowledged that Kwantlen has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations for hunting and trapping by Kwantlen resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with hunting and trapping locations.

Mitigation measures identified in the marine mammal and terrestrial wildlife assessments are expected to be effective at addressing potential effects on the availability of hunting and trapping resources preferred by Kwantlen. Therefore, Project-related effects on hunting and trapping related to potential changes in the availability of resources would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for hunting and trapping by Kwantlen; therefore, Potential Project-related effects on Kwantlen fishing would be expected to be negligible.

Project operation is not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when hunting and trapping are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** to address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while hunting and trapping. At preferred hunting and trapping locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Kwantlen.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Kwantlen is hunting and trapping. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Kwantlen's Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.7 Gathering

Kwantlen also report harvesting terrestrial plant foods including wapato, camas lily, various berries and Pacific crabapple. Kwantlen report kelp as an important food and medicinal plant, and other intertidal species of interest include cattail, tule, and grasses. Kwantlen identify Brunswick Point, Westham Island, Canoe Pass, portions of Lulu Island, Kwantlen Indian Reserve 4, and Ladner as key harvesting areas.

The proposed Project has the potential to affect gathering through changes in access to preferred locations, changes in availability of preferred resources, changes in quality of preferred resources and changes in quality of experience when gathering.

Potential changes in access to preferred gathering locations by Kwantlen as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for gathering by Kwantlen during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to gathering locations by Kwantlen from instream construction activities, are expected to be negligible. While it is acknowledged that Kwantlen has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations for gathering by Kwantlen resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with gathering locations.

Mitigation measures identified in the vegetation assessment to address Project-related effects on terrestrial vegetation are expected to be effective at addressing potential effects on the availability of resources for the exercise of Aboriginal Interests related to gathering. Therefore, Project-related effects on gathering related to potential changes in the availability of vegetation would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for gathering by Kwantlen; therefore, Potential Project-related effects on gathering related to potential changes in the quality of resources would therefore be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when gathering are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while gathering. At preferred gathering locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Kwantlen.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Kwantlen is gathering. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Kwantlen's Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.8 Archaeology and Cultural Heritage Interests

Kwantlen identify several traditional transportation routes to the east of the project corridor. Kwantlen say that some of the “most highly significant” cultural heritage sites are associated with fishing on the Fraser River.

The proposed Project has the potential to affect Kwantlen's Aboriginal Interests related to archaeology and cultural heritage through changes in access to preferred locations and changes in quality of experience.

Potential changes in access to locations related to Kwantlen's archaeological and cultural heritage interests as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations related to Kwantlen's interests related to archaeology and cultural heritage during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to locations related to Kwantlen's archaeological and cultural heritage interests from instream construction activities are expected to be negligible. While it is acknowledged that Kwantlen has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations related to Kwantlen's archaeological and cultural heritage interests resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and not expected to overlap with locations related to Kwantlen's archaeological and cultural heritage interests.

With regard to noise, mitigation measures proposed in Section 4.10 Atmospheric Noise would also be expected to address the potential Project-related effect to the quality of experience while undertaking activities related to cultural heritage. At locations related to Kwantlen's archaeological and cultural heritage interests, that overlap or are in proximity to known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Kwantlen.

As reported in **Section 6.1 Heritage Resources**, no archaeological or historical sites were identified within the Project area during fieldwork; however, there may be other locations with intangible cultural value or meaning to Kwantlen (e.g., spiritual or storied sites, named places) potentially affected by the Project. In addition, physical alterations to the landscape may affect archaeological or historical sites, and how this landscape is experienced culturally.

As a result, mitigation measures proposed in Part B are not expected to address a potential incremental and permanent Project-related effect tied to Kwantlen's Aboriginal Interests related to archaeology and cultural heritage that may be associated with the introduction of a new prominent feature to the cultural landscape. As this landscape has been previously modified by anthropogenic changes, the potential incremental Project-related effect on the quality of

experience tied to the exercise of Aboriginal Interests is expected to be minimal, but permanently disruptive for Kwantlen, who have identified a historical connection to, and continued or desired use of, sites or places that help define the cultural landscape in the Project area.

Additional mitigation to address this potential incremental effect that is not otherwise addressed in the Application is proposed in **Section 10.1.3.4** and summarized below under Mitigation.

5.0 Mitigation

This section provides a summary of mitigation measures identified to address potential Project-related effects on the exercise of Aboriginal Interests by Kwantlen. For a more detailed discussion, refer to **Section 10.1.3.4 Mitigation**.

Mitigation measures identified for the relevant VCs and ICs in Part B of the Application were reviewed to assess their effectiveness at addressing potential Project-related effects on the exercise of Aboriginal Interests related to those VCs. Examples of mitigation that are proposed in the Application to address potential effects on VCs and ICs, with the potential to result in an effect on Aboriginal Interests, include:

- Avoiding fisheries sensitive timing windows during key Project activities.
- Developing a Marine Access Management Plan to ensure marine use activities, including those supporting Aboriginal Interests, can continue during Project construction.
- Scheduling activities with the potential to generate underwater noise to avoid potential effects on marine mammals.
- Development and implementation of a Terrestrial Vegetation and Wildlife Management Plan with measures to minimize disturbance and loss of vegetation, prevent soil compaction, and minimize clearing in order to minimize effects on vegetation.

These measures are expected to be largely effective at avoiding, reducing, or otherwise managing potential Project-related effects on the exercise of Aboriginal Interests during Project construction and operation.

Recognizing some measurable effects on Kwantlen's Aboriginal Interests could remain following the application of mitigation to address potential effects on the relevant VCs and ICs in Part B, the following additional measures have been identified to address such effects:

- Ongoing consultation with Kwantlen regarding proposed measures, management plans, and monitoring programs related to intermediate components and valued components assessments; and
- Development of a Cultural Heritage Management Plan.

6.0 Residual Effects

With the implementation of mitigation measures identified in Section 10.1.3.4 and summarized above, residual adverse effects of the proposed Project on the exercise of Aboriginal Interests are expected to be negligible (i.e., not measurable or detectable), and are not further assessed.

7.0 Summary and Conclusion

Part C of the Application builds on consultation undertaken to date to understand Kwantlen's Aboriginal Interests and provides for an assessment of potential Project-related effects of the Project on Aboriginal Interests.

The Ministry began consultations with Kwantlen prior to the submission of the Project Description, which is the end of the Initial Consultation Phase. Both EAO and the Ministry consulted with Kwantlen during the Pre-Application Phase, which concluded with the submission of the Application. The main concerns expressed by Kwantlen during consultations include:

- Kwantlen's participation and Project-related opportunities, including employment, training and contracting;
- Effects to fish and fish habitat;
- Cumulative effects;
- Trend in development of the lower Fraser River;
- EAO process and timelines and adequacy of Environmental Assessment (EA) methodology to address social and cultural effects;
- Social effects of the Project on Kwantlen's ability to transfer knowledge, language and participate in socio-cultural practices;
- Consideration of cumulative effects on Aboriginal rights;
- Absence of a comprehensive study of cumulative effects on the Fraser River;
- Concerns related to dredging, potential for increased vessel traffic and larger vessels resulting from Tunnel decommissioning;
- Potential effects on flow rates after Tunnel removal; and
- Potential effects of run off and drainage along the highway corridor, including heavy metal transport from traffic to water and land, management of runoff from the bridge;
- Protection of archaeological and heritage resources;
- Consideration of Aboriginal knowledge and importance of Aboriginal Traditional Knowledge (ATK) to a more holistic assessment;

- Appropriate use of information shared by Kwantlen First Nation as it relates to confidentiality and dissemination;
- Opportunities for cultural recognition;
- Funding capacity for Project participation;
- Potential effects on wildlife; and
- Use of culturally significant plants.

Based on information provided by Kwantlen and other publicly-available sources, the Ministry developed a summary of past, present and desired future use of the proposed Project area and its surroundings for the purposes of fishing, hunting/trapping, gathering, archaeology and cultural heritage interests and other related interests. This summary indicates that Kwantlen has, does and intends to continue to use the Fraser River for cultural purposes.

Relying first on the results of the effects assessments for related VCs and ICs in Part B, the assessment of potential effects of Kwantlen's Aboriginal Interests considered four indicators:

1. Access to preferred locations for the exercise of Aboriginal Interests;
2. Availability of preferred resources for the exercise of Aboriginal Interests;
3. Quality of preferred resources for the exercise of Aboriginal Interests; and
4. Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests.

As reviewed in **Section 10.1.3.3** and **Section 10.1.3.4**, the mitigation measures, management plans, and monitoring programs identified in Part B of the Application for ICs or VCs linked to the exercise of Aboriginal Interests are expected to be largely effective at addressing the incremental Project-related effects noted above on the exercise of Aboriginal Interests by Kwantlen First Nation, except in the following potentially measurable cases:

- Project construction:
 - Potential temporary direct (minor) effect on quality of experience related to construction-related noise and a potential temporary indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance
- Project operation:
 - Potential permanent direct (minor) effect on quality of experience related to traffic noise and a potential indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance while engaged in those uses

- Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses

The following additional measures have been identified to address the above-noted effects:

- Ongoing consultation with Kwantlen regarding proposed measures, management plans, and monitoring programs related to VCs and ICs assessments; and
- Development of a Cultural Heritage Management Plan.

With the implementation of mitigation proposed to address potential effects on VCs and ICs, as well as additional mitigation proposed to address potential residual effects on Aboriginal Interests, no effects on the exercise of Aboriginal Interests by Kwantlen, as a result of the Project, are expected.

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. *Environmental Assessment Act* (B.C. *EAA*), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. *EAA* sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. *EAA*, and that it requires an EAC.

The Project as proposed is not subject to review under the *Canadian Environmental Assessment Act, 2012*, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the *Environmental Assessment Act*.

| Social and cultural effects and the adequacy of Environmental Assessment (EA) methodology. | <p>Concerns related to the adequacy of Environmental Assessment are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Social and cultural effects of the project are considered in Part C of the Environmental Assessment Application (Application). Where Aboriginal Groups values and perspectives have been provided to the Proponent regarding environmental, economic, social, heritage or health valued components (VCs), they have been incorporated, where applicable into the Part B assessment of those VCs.</p> | Addressed | None |

ABORIGINAL INTERESTS

There are potential Project related impacts to Kwantlen title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape
- Instream locations (during construction)

Quality of experience while engaged in or tied to traditional use

- cultural landscape
- Instream locations (during construction)

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations (during construction)
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

Quality of experience while engaged in or tied to traditional use

- changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
- Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Kwantlen as a result of the Project are not expected.

ABORIGINAL PARTICIPATION AND PROJECT-RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project. Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project’s Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests

Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes

Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |

| | <p>operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed. While the Ministry acknowledges that Kwantlen First Nation is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project.</p> | | |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|--|
| <p>Change in flow rates after Tunnel removal.</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm.</p> <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. River Hydraulics and River Morphology are addressed in Section 4.1.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4 (River Hydraulics and Morphology Mitigation Measures)</p> |

| 4.8 TERRESTRIAL WILDLIFE | | | |
|---|---|--------------------------|--|
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Potential light and noise effects on wildlife and fish. | The Ministry understands that Kwantlen is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.8.4 (Terrestrial Wildlife Mitigation Measures) |
| Potential effects of the bridge structure on species such as waterfowl and migratory birds. | The Ministry understands that Kwantlen is concerned with the potential effects of the new bridge on species such as waterfowl and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highway will mitigate potential Project-related increase in traffic collision risk. Nesting opportunity provided by the new bridge will offset the loss of nesting habitat due to removal of the Deas Slough Bridge. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.8.4 (Terrestrial Wildlife Mitigation Measures) |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Potential effects of run off and drainage.</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, has been determined. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected.</p> <p>Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.2.4 (Sediment and Water Quality Mitigation Measures)</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|-------------------------|
| <p>Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River.</p> | <p>Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> | <p>Addressed in Application</p> | <p>None</p> |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|---|
| Potential effects to fish and fish habitat and spawning grounds, including species of cultural and economic importance such as eulachon, sturgeon, and salmon. | The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to the Kwantlen. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application. | Addressed | Implementation of mitigation measures outlined in 4.4.4 (Fish and Fish Habitat Mitigation Measures) |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|---|
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon.</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in 4.3.4 (Underwater Noise Mitigation Measures) and 4.4.4 (Fish and Fish Habitat Mitigation Measures)</p> |
| <p>Importance of habitat restoration and Kwantlen’s interest in participating in all aspects of these works</p> | <p>The Ministry notes Kwantlen’s interest in participating in habitat restoration work.</p> | <p>Noted</p> | <p>Ongoing consultation</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.
 Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan
 Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Kwantlen has not voiced any specific issues or concerns with respect to Marine Mammals. | | | |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail marsh that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management.

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Invasive plant species and proposed plans to manage presence during construction.</p> | <p>Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.7.4 (Vegetation Mitigation Measures)</p> |
| <p>Inclusion of culturally significant plants in planting plans and opportunity for Kwantlen in the identification of plants, and planting work.</p> | <p>Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans.</p> | <p>Addressed</p> | <p>The Ministry will develop planting plans with consultation from Aboriginal Groups</p> |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

- A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.
- A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.
- A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

- Minimize potential effects through Project design.
- Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.
- Habitat enhancement and offsetting.

Residual & Cumulative Effects

- There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.
- There is a low, long-term probability of barn owl mortality.
- No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|----------------------------------|---------------|--------------------------------|
| Kwantlen has not voiced any specific issues or concerns with respect to Terrestrial Wildlife. | | | |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Development of an Air Quality and Dust Control Management Plan for inclusion of the Construction Environmental Management Plan.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Kwantlen has not voiced any specific issues or concerns with respect to Air Quality. | | | |

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry’s 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Kwantlen has not voiced any specific issues or concerns with respect to Atmospheric Noise. | | | |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

During construction, a measureable effect on access to instream locations for traditional use has been determined.

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|--|
| <p>Potential effects of construction during fishing season on fishing activities.</p> | <p>Potential interference with Kwantlen fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4 (Marine Use Mitigation Measures)</p> |
| <p>Effects of construction and decommissioning-related barging activities on Kwantlen First Nation fishing activities and on the test fishery.</p> | <p>Potential interference with Kwantlen fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4 (Marine Use Mitigation Measures)</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Address temporary effects on existing land use during construction and incorporate land use considerations into a Traffic Management Plan.

Incorporate land use considerations into a MarineAccess Management Plan.

Reconnect recreational trails.

Residual & Cumulative Effects

There is a high, short-term probability of disturbance to residential, commercial and industrial land uses.

There is a high, short-term probability of disturbance to recreational uses near the new bridge.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Kwantlen has not voiced any specific issues or concerns with respect to Land Use | | | |

5.5 VISUAL QUALITY

The new bridge will add noticeable visual features to the landscape and will change visual conditions adjacent to the Project alignment. Replacement of interchanges also has the potential to change visual conditions of these locations. At distances greater than one kilometer, the bridge deck will merge with the natural landscape and the main visual features will be the bridge towers. Changes in visual quality at interchanges will be minor as visual quality in such areas is currently influenced by existing transportation infrastructure.

Effects

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Minimize effects through Project design.

Use of vegetated buffers to minimize visual effects to residential developments within close proximity to the bridge in Delta.

Residual & Cumulative Effects

There is a moderate, long-term probability of disturbance to visual quality.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Kwantlen has not voiced any specific issues or concerns with respect to Visual Quality | | | |

6.1 HERITAGE RESOURCES

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a change find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|------------------|--|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites. Protection of cultural and archaeological sites that are known to exist or may be discovered within the Project area.</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Kwantlen. All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment. Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |
| <p>Participation in archaeological fieldwork and review of archaeological draft reports</p> | <p>Kwantlen participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports.</p> | <p>Addressed</p> | <p>Kwantlen will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports.</p> |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

During construction, a measureable effect on access to instream locations for traditional use has been determined.

| 7.0 HUMAN HEALTH | | | |
|---|----------------------------------|---------------|--------------------------------|
| <p>During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.</p> <p>During operation, a negligible effect on access to instream locations for traditional use has been determined.</p> <p>During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.</p> <p>A negligible effect on access to upland locations for traditional use has been determined.</p> <p>A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.</p> <p><u>Mitigation</u></p> <p>Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.</p> <p>Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.</p> <p><u>Residual & Cumulative Effects</u></p> <p>No significant Project-related residual or cumulative effects on human health are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Kwantlen has not voiced any specific issues or concerns with respect to Human Health. | | | |

8.0 ACCIDENTS AND MALFUNCTIONS

Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.

In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|----------------------------------|---------------|--------------------------------|
| Kwantlen has not voiced any specific issues or concerns with respect to Accidents and Malfunctions. | | | |

| OTHER ISSUES | | | |
|--|---|---------------|--------------------------------|
| Consultation with Kwantlen First Nation identified issues outside of the environmental assessment process, Aboriginal Interests, Aboriginal Consultation, Aboriginal Participation and Project-Related Opportunities, and sections of the Application. | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Congestion at Richmond-Vancouver border | Traffic analysis shows that approximately 60 per cent of northbound morning Tunnel traffic is destined to Richmond, and that traffic volumes at the Oak Street and Knight Street bridges have been declining since 2010. While Oak Street is likely to remain congested due to signal lights at Oak Street and 70th Avenue in Vancouver, the Project is not expected to result in more traffic driving over Oak Street Bridge each day. The new replacement bridge and the Highway 99 improvements will increase the convenience of accessing transit and provide an efficient route to the Canada Line stations in Richmond for commuters continuing to Vancouver. Traffic is addressed in Section 5.1 of the Application. | Addressed | None |

APPENDIX G

Lake Cowichan First Nation

1.0 Introduction

Aboriginal Interests are defined as asserted or determined Aboriginal rights, including title, or treaty rights. This appendix presents the information specific to Lake Cowichan First Nation (Lake Cowichan).

The organization of the information presented generally follows Part C and includes the following sections:

- Consultation;
- Community Profile;
- Existing Conditions;
- Potential Effects;
- Mitigation;
- Residual Effects; and
- Summary and Conclusion.

For more detailed information on the effects assessment on Aboriginal Interests related to Lake Cowichan First Nation, refer to the following sections of Part C:

- Consultation with Lake Cowichan (**Section 10.1.2.10**);
- Lake Cowichan community profile (**Section 10.1.1.5**);
- Description of existing Lake Cowichan First Nation's Aboriginal Interests (**Section 10.1.3.2**);
- Assessment of potential effects of the Project on the exercise of Lake Cowichan First Nation's Aboriginal Interests (**Section 10.1.3.3**);
- Mitigation relating to potential effects on Aboriginal Interests (**Section 10.1.3.4**); and
- Residual effects on Lake Cowichan First Nation's Aboriginal Interests following application mitigation (**Section 10.1.3.5**).

A summary of Aboriginal Interests Assessment for Lake Cowichan is also provided in **Section 10.1.3.8**.

The summary presented in this appendix also incorporated information found in the Lake Cowichan Overview Table (**Appendix G2**), which provides detailed information regarding:

- Lake Cowichan's issues and concerns identified to date;
- Identification of potential effects on VCs and ICs that relate to the assessment of effects on Lake Cowichan's Aboriginal Interests;

- The Ministry’s response to specific issues and concerns raised by Lake Cowichan;
- The status of these issues and concerns; and
- Next steps required to address outstanding issues and concerns.

2.0 Consultation

This section provides information regarding the consultation activities that the EAO and Ministry carried out prior to submission of the Application.

2.1 EAO-led Consultation Activities

2.1.1 Capacity Funding

When a provincial agency is a proponent of a project going through a provincial EA under the British Columbia *Environmental Assessment Act* (BCEAA), that agency provides funding to Aboriginal Groups to support their involvement in pre-Application and Application review phases in place of EAO providing such funding. The Ministry’s provision of capacity funding is discussed in the following section, Proponent-led Consultation Activities.

2.1.2 Participation in Working Group

EAO invited Lake Cowichan and all other Aboriginal groups identified in Schedule B of the Section 11 Order to participate as members of a Working Group.

During the Pre-Application stage, EAO led two Working Group meetings where the Ministry presented information on the Project and the environmental assessment process and received and responded to comments on those presentations. Although Lake Cowichan did not attend, materials were provided.

Lake Cowichan also participated in the completeness review of the Application that considered whether the Application included information requirements set out in the Application Information Requirements.

It is anticipated that Lake Cowichan will continue as an active member of the Working Group through the environmental assessment process.

2.2 Proponent-led Consultation Activities

The Ministry began consultation with Lake Cowichan in early 2014 in order to identify the nature and scope of Lake Cowichan First Nation’s Aboriginal Interests and how they might be impacted by the Project. Following is a summary of consultation activities led by the Ministry with Lake

Cowichan First Nation. A more detailed discussion is provided under the Lake Cowichan section in **Section 10.1.2.10 Overview of Consultation with each Schedule B Aboriginal Group**. The following sections represent the main activities undertaken in support of Proponent-led consultation and include the following:

- Provision of capacity funding;
- Traditional use, traditional knowledge and other studies;
- Examples of Consultation Activities; and
- Concerns Identified to Date.

2.2.1 Capacity Funding

The Ministry entered into a Participation Funding Agreement, including the Initial Consultation and Pre-Application phases for consultation, with Lake Cowichan First Nation. The Ministry has been working with Lake Cowichan regarding their needs for capacity funding to facilitate their participation in the Application Review Phase. Consultation activities that are anticipated to be undertaken during the Application Review phase that will be supported by capacity funding include participation in technical reviews and analyses, involvement in ongoing consultation activities, and presentation of key information regarding their respective Aboriginal Interests.

2.2.2 Traditional Use, Traditional Knowledge & Other Studies

The Ministry provided additional funding to Lake Cowichan for the preparation and submission of the traditional use study *Ts'uubaasatx Interest: George Massey Tunnel*. The purpose of such studies is to identify Aboriginal input and traditional knowledge for inclusion and consideration in the EA. In addition, studies were funded to enhance the Ministry's understanding of Aboriginal Interests and Aboriginal Group's past, present and desired future use as it pertains to the exercise of Aboriginal Interests within the Project area and the potential adverse effects on identified Aboriginal Interests.

2.2.3 Examples of Consultation Activities

A number of consultation activities were undertaken with Lake Cowichan during both the Initial Consultation Phase and the Pre-Application Consultation Phase as follows:

Initial Consultation Phase Activities - The Ministry recognized the importance and value of early engagement with Schedule B Aboriginal Groups and undertook an Initial Consultation Phase prior to the Pre-Application Phase. The Initial Consultation Phase concluded in December 16, 2015 with submission of the Project Description and Key Areas of Study. The focus of the Initial

Consultation Phase was collection of baseline information and sharing of draft EA-related documents (i.e. Project Description and Key Areas of Study, draft Application Information Requirements (AIR)). The main consultation activities the Ministry undertook with Lake Cowichan included:

- Sharing of Project-related information including focused presentation on topics of interest and/or concern to Lake Cowichan;
- Funding for Lake Cowichan's participation in Project consultation activities and EA process;
- Lake Cowichan participation in field studies;
- Review of draft EA documents such as the Project Description and Key Areas of Study, Heritage Resources Overview Assessment/Archaeological Overview Assessment, draft AIR, Heritage Resources Assessment and Aboriginal Consultation Plan;
- Meetings with Lake Cowichan leadership, staff, consultants, elders and membership; and
- Response and follow up with Lake Cowichan regarding the identification and resolution of issues.

Pre-Application Consultation Phase Activities - The Pre-Application Consultation Phase began with the filing of the Project Description and concluded with the submission of the Application. This phase included the issuance of the Section 11 Order, AIR development and collection of baseline information. The main consultation activities the Ministry undertook with Lake Cowichan included:

- Sharing of Project-related information including focused presentation on topics on interest and/or concern to Lake Cowichan;
- Funding for Lake Cowichan's participation in Project consultation activities and EA process;
- Meetings with Lake Cowichan leadership, staff, consultants, elders and membership;
- Lake Cowichan participation in the EA Working Group;
- Review of draft EA documents such as the Application Information Requirements, Aboriginal Consultation Plan, and Aboriginal Consultation Reports; and
- Response and follow up with Lake Cowichan regarding the identification and resolution of issues.

2.2.4 Concerns Identified to Date

As outlined above, Lake Cowichan First Nation’s concerns, identified through consultation undertaken to-date, are presented in **Appendix G2 Lake Cowichan Overview Table**. The Ministry’s response to Lake Cowichan First Nation’s key concerns regarding potential impacts on Lake Cowichan First Nation’s Aboriginal Interests are outlined below:

Table 1 **Concerns Identified to Date**

| Concerns Identified to Date | Response |
|---|---|
| Protection of Lake Cowichan First Nation’s rights to harvest within the Project area. | Lake Cowichan’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife, residual effects on the exercise of Aboriginal Interests by Lake Cowichan as a result of the Project are not expected. |
| Aboriginal participation and Project-related opportunities <ul style="list-style-type: none"> • Potential employment, training, contracting and economic development opportunities • Community preparedness • Cultural recognition and naming • Importance of Łæqtinəs/TI’uqtinus (was a “little New York”) near the Project area for trade both in terms of historic and current/future significance • Revenue from tolling | The Ministry is committed to working with Lake Cowichan to identify potential employment, training, contracting and economic development opportunities and to identify ways to support community preparedness. The Ministry is exploring opportunities for cultural recognition and naming and will work with Lake Cowichan on these opportunities. The Ministry notes Lake Cowichan’s comments regarding the importance of Łæqtinəs/TI’uqtinus. The provincial tolling strategy stipulates that revenue from tolling may only be used to defray the costs of designing, constructing, operating and maintaining highways. |

| Concerns Identified to Date | Response |
|---|---|
| <p>Consideration of cumulative effects on Aboriginal rights</p> | <p>The Ministry’s cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed.</p> |
| <p>Effects to fish and fish habitat</p> <ul style="list-style-type: none"> • Importance of fish and fish habitat including species of cultural and economic importance such as eulachon, sturgeon and salmon • Potential effects of pile driving, blasting and underwater noise generated by Tunnel decommissioning and other construction activities | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon, salmon to Lake Cowichan and is committed to avoiding or mitigating any potential effects.</p> <p>The Ministry designed a clear span bridge over the Fraser River South Arm and Deas Slough to avoid or minimize Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Lake Cowichan’s Fisheries Department continues to be very helpful in the review of Green Slough concepts.</p> <p>As outlined in Section 4.3 (Underwater Noise), sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Underwater noise from these sources will be effectively mitigated by scheduling activities during period of low tide, when work can be completed under shallow water conditions or in the dry.</p> |

| Concerns Identified to Date | Response |
|--|--|
| <p>Impact on marine mammals such as the Stellar Sea Lion</p> | <p>Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km. Standard industry and best management practices will be applied to activities such as impact pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to. Marine Mammals are addressed in Section 4.6 of the Application.</p> |
| <p>Increase in traffic, and consequent increase in associated noise and vibration due to the increases capacity of the new bridge</p> | <p>The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new Bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment, after mitigation, are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the Highway but do not exceed what is acceptable for residential, educational or institutional facilities. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> |
| <p>Potential effects of construction during fishing season on fishing activities. Effects of construction and decommissioning-related barging activities on Lake Cowichan fishing.</p> | <p>Lake Cowichan’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8). Mitigation measures are outlined in Section 5.2.4 (Marine Use Mitigation Measures) of the Application.</p> |

| Concerns Identified to Date | Response |
|---|--|
| Potential effects on Fraser River flow rates after Tunnel removal | Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Flow rates are discussed in Section 4.1 (River Hydraulics). |
| Potential effects of run off and drainage | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation.</p> <p>During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciate change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.</p> <p>Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected.</p> <p>Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> |

3.0 Community Profile – Lake Cowichan First Nation

Lake Cowichan is governed by a four-member council under a custom electoral system. The current chief and one councillor were appointed in October 1977, while two other councillors were appointed in March 1999.

Lake Cowichan membership takes descent from both Ditidaht (Nuu-chah-nulth) ancestors and *Hul'qumi'num*' ancestors known as the Somenos (or Saumni, Samena, Saumina and other variations), one of seven village groups comprising the Cowichan Tribes. The community is based on a single reserve on the northeastern shore of Cowichan Lake, approximately 30 km west of Duncan (on the east coast of Vancouver Island), and less than 20 km east of Nitinat Lake (on the west coast of Vancouver Island). In 1860, the community was significantly affected by a smallpox epidemic; the population has remained small, with only 12 of 20 registered members living on reserve. The Project area does not overlap any current or former Lake Cowichan reserve lands.

Lake Cowichan have stated that Cowichan Lake has always been their primary home, and that their traditional territory is centred on the lake, taking in surrounding lands, streams, and other waters, including the uppermost part of the Cowichan River. They have also stated that their use of this territory has continued to the present day. A three-year Forest Consultation and Revenue Sharing Agreement with the Province of British Columbia, dated 2011, identifies this Vancouver Island-based territory.

Based on their affiliation with the Hul'qumi'num Treaty Group, the Lake Cowichan has also been associated with a larger, collective traditional territory with the other member First Nations of that group. The core territory of the Hul'qumi'num Treaty Group overlaps the Project area at the Tunnel crossing. The other members of the Hul'qumi'num Treaty Group – namely, Cowichan Tribes, Halalt First Nation, Penelakut Tribe, and Stz'uminus First Nation – are working jointly on their Fraser River interests through the Cowichan Nation Alliance. Lake Cowichan is engaging with the Ministry on the Project separately from the Cowichan Nation Alliance.

3.1 Lake Cowichan Aboriginal Interests: Existing Conditions

This section provides a high level of summary of past, present, and desired future use of the proposed Project area and surroundings for traditional purposes are or may be connected with the exercise of Lake Cowichan First Nation's Aboriginal Interests. A more detailed discussion, including sources used, is provided under Lake Cowichan in **Section 10.1.3.2 Existing Conditions**.

3.1.1 General

- The Project area intersects with the claimed core territory or “title lands” of the member bands of the Hul’qumi’num Treaty Group, with which the Lake Cowichan has been affiliated. This area includes *Tl’uqtinus*, in the vicinity of the north end of the George Massey Tunnel.
- A Lake Cowichan community member recently stated that they have not used any resources from the George Massey Tunnel area since 1960, but that they do occasionally access the area.

3.1.2 Fishing

- Lake Cowichan followed a seasonal round of resource use and regional settlement. Within this round, the Fraser River estuary has been described as the “most important economically”. Species harvested historically on the South Arm of the Fraser River included salmon, sturgeon, eulachon, shellfish, and marine mammals (particularly seals).
- Dried clams and other foodstuffs (e.g., camas) were traded to other First Nations.
- Areas within the wider Fraser River estuary were also utilized by *Hul’qumi’num’*-speaking peoples for fishing salmon, sturgeon, groundfish, and other marine resources on the foreshore.
- Access to sockeye for Hul’qumi’num Treaty Group member nations for food, social, and ceremonial (FSC) purposes is said to be provided annually by Fisheries and Oceans Canada (DFO) in Johnstone Strait and “off the mouth of the Fraser River”. In the vicinity of the Project area, however, access has been subject to negotiations with First Nations local to the lower Fraser River, and has been limited, occurring only in 2005, 2006, and 2008.
- Lake Cowichan currently participates in the Hul’qumi’num Fisheries Limited Partnership (HFLP), a commercial fishing business, along with Cowichan Nation Alliance member groups and Lyackson First Nation. Species harvested under commercial licences through this enterprise are crab, prawn, prawn, halibut, herring, rockfish, sablefish, and salmon. Commercial fisheries for halibut and sablefish are generally undertaken off the west coast of Vancouver Island.

3.1.3 Hunting/Trapping

- Large game harvested by Lake Cowichan likely included deer and black bear.
- Small game, fur-bearing mammals, and waterfowl were harvested from aquatic settings along sloughs and wetlands. Species targeted would have included beaver, muskrat, otters, mink, ducks, geese, and swans.

- Lake Cowichan have reported they are harvesting ducks, specifically mallards and coots (mud hens), at Roberts Bank. They have previously expressed concern regarding the diminishing numbers of marine birds in the area.

3.1.4 Gathering

- Lake Cowichan has reported gathering eelgrass at Roberts Bank in the intertidal zone.
- Other member bands of the Hul'qumi'num Treaty Group have reported that berries and other plants were gathered and cultivated by *Hul'qumi'num' Mustimuhw* ancestors at *Tl'uqtinus*, and were harvested from other locations in the Project area. These plants included cranberries, blueberries, blackberries, wapato, and bulrushes/reeds (*stth'equn*)

3.1.5 Archaeology and Cultural Heritage Interests

- No information on Lake Cowichan's interests with respect to archaeology and cultural heritage were identified in the study prepared for this Project, *Ts'uubaasatx Interest: George Massey Tunnel*, or in publicly available sources.

3.1.6 Other Related Interests

- Members of the Lake Cowichan community are actively working to find members that have dispersed from the community, and they have expressed their desire to, at some time in the future, visit the Project area with these new members in order to renew their relationship with and learn about their "traditional rights" in the area.

4.0 Potential Effects

This section provides a summary of the methodology used to identify potential adverse effects of the proposed Project on the exercise of Aboriginal Interests by Aboriginal Groups during Project construction and operation, followed by a summary of potential effects on Lake Cowichan First Nation's Aboriginal Interests, specifically. For a more detailed description of the methodology and a summary of the results, refer to **Section 10.1.3.3. Potential Effects**.

4.1 Methodology for Identification of Potential Effects

The first step in the effects assessment on Aboriginal interests was the identification of potential adverse effects on traditional use activities and related interests as a result of Project construction or operation. To evaluate these potential adverse effects, the findings of the following Valued Component (VC) chapters in Part B of the Application were considered, including identified mitigation measures, residual effects, cumulative effects and follow up strategies:

- **Section 4.4 Fish and Fish Habitat**

- **Section 4.6 Marine Mammals**
- **Section 4.7 Vegetation**
- **Section 4.8 Terrestrial Wildlife**
- **Section 5.2 Marine Use**
- **Section 5.3 Land Use**
- **Section 5.5 Visual Quality**
- **Section 6.1 Heritage Resources**
- **Section 7.1 Human Health**

The findings of the following Intermediate Component (IC) chapters were also considered in the assessment:

- **Section 4.1 River Hydraulics and River Morphology**
- **Section 4.2 Sediment and Water Quality**
- **Section 4.9 Air Quality**
- **Section 4.10 Atmospheric Noise**

The assessment of potential adverse effects of the Project on the exercise of Aboriginal Interests, including measures to address those effects, are presented in **Section 10.1.3.3** through **Section 10.1.3.5**, and largely applies the same methods used in Part B of the Application for the IC and VC assessments, as outlined in **Section 3.0 Assessment Methodology**.

In addition to information from the VC and IC assessments that support the assessment of potential effects on Aboriginal Interests, information from a Health Impact Assessment (HIA) undertaken to support Project planning, including mitigation recommendations, has been integrated into the assessment of potential effects on Aboriginal Interests. The HIA for the Project can be found at <https://engage.gov.bc.ca/masseytunnel>. A summary of the key findings is provided in **Section 7.2 Health Impact Assessment**.

4.2 Selection of Indicators

Four parameters were chosen as indicators to understand and evaluate potential Project-related effects on the exercise of Aboriginal Interests. The rationale for their selection is presented in the following table.

Table 2 Indicators for the Aboriginal Interests Assessment

| Indicator | Rationale for Selection |
|---|---|
| Access to preferred locations for the exercise of Aboriginal Interests | Project components or activities could result in changes in access to or patterns of travel between traditional use locations on land or water |
| Availability of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in distribution or movement, relative abundance, or habitat area or composition of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |
| Quality of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in the real or perceived quality of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |
| Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests | Project components or activities could result in: (1) direct sensory disturbance to traditional users (e.g., from noise, vibration); and/or (2) indirect changes to cultural practices, customs or traditions – i.e., cultural heritage or the expression and transfer of cultural values or ways of knowing (e.g., language, laws/governance, stories, spiritual beliefs) – tied to the cultural landscape or to the traditional use of specific traditional use locations or resources within that landscape. |

Potential adverse effects on the indicators noted above were analyzed in terms of the type and level of effect that Project components and activities may be expected to have on the exercise of Aboriginal Interests.

For the purposes of this assessment, no effect was understood to mean that no interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests would be expected. Where it was determined that an interaction, and potential effect, could occur, the following definitions were used to guide the characterization of the effect as negligible or measurable:

- Negligible – An interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests may occur, but modifications to the use of preferred options would not be expected.
- Measurable – Modifications to the exercise of Aboriginal Interests at preferred locations or in relation to preferred resources may be needed, and may be considered to be:
 - Minor (minimal or temporary modifications may be required to use preferred options),
 - Moderate (more frequent or longer term modifications may be required to use preferred options), or
 - Serious (permanent or indefinite modifications may be required potentially resulting in the loss of preferred options).

4.3 Identified Potential Effects

As noted above, the first step in evaluating potential adverse effects on Aboriginal Interests was a consideration of the findings for relevant Part B VCs and ICs, including identified mitigation measures, residual effects, cumulative effects and follow up strategies. The residual effects with the potential to result in an adverse effect on Aboriginal Interests are then carried forward in the assessment. Using the four indicators noted in the previous section, the potential Project-related effects and level of effect predicted in relation to Lake Cowichan's exercise of Aboriginal Interests, during construction and operation phases, remaining after Part B mitigation are as follows:

Table 3 Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests

| | Construction | | Operation | | Residual Potential Effects |
|---|--------------|------------|------------|------------|----------------------------|
| | Negligible | Measurable | Negligible | Measurable | |
| River locations for traditional use as a result of changes to physical characteristics of these locations | ✓ | | ✓ | | |
| Instream locations for traditional use | ✓ | | ✓ | | |
| Upland locations for traditional use | ✓ | | ✓ | | |

Table 4 Changes in Quality of Preferred Resources for the Exercise of Aboriginal Interests

| Cultural landscape | | ✓ | | ✓ | <p>Construction - Potential temporary indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance</p> <p>Operation - Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses.</p> |

4.4 Potential Project-Related Effects on Lake Cowichan’s Aboriginal Interests

Using the methodology presented in **Section 10.1.3.3 Potential Effects**, Table 7 provides the potential incremental Project-related effects, following mitigation of Project-related effects on Part B VCs and ICs as described in Part B, related to Lake Cowichan’s Aboriginal Interests as summarized in Existing Conditions were identified for Project Construction and Operation. A discussion of potential Project-related effects on fishing, hunting/trapping, gathering and archaeology and cultural heritage follows the table.

Table 7 Summary of Potential Project-Related Effects

| Indicator | Potential Project-Related Effect | Potentially-Affected Aboriginal Interests |
|--|---|--|
| Project Construction | | |
| Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified | <ul style="list-style-type: none"> • n/a |
| Changes in Availability of Preferred Locations for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified | <ul style="list-style-type: none"> • n/a |
| Changes in Quality of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified | <ul style="list-style-type: none"> • n/a |
| Changes in Quality of Experience in Exercising, or tied to the Exercise, of Aboriginal Interests | <ul style="list-style-type: none"> • Potential temporary direct (minor) effect on quality of experience related to construction-related noise • Potential temporary indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance | <ul style="list-style-type: none"> • Fishing • Hunting/Trapping • Gathering • Archaeology & Cultural Heritage • Other Related Interests |

| Indicator | Potential Project-Related Effect | Potentially-Affected Aboriginal Interests |

4.5 Fishing

According to Lake Cowichan, the Fraser River estuary is an economically important component in their seasonal round. Species harvested historically on the South Arm of the Fraser River included salmon, sturgeon, eulachon, shellfish, and marine mammals (particularly seals).

The proposed Project has the potential to affect fishing practices through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred fishing locations by Lake Cowichan, as a result of changes in river hydraulics or morphology, are expected to be negligible before mitigation. Potential changes in access to instream locations for fishing by Lake Cowichan during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to fishing locations by Lake Cowichan from instream construction activities are expected to be negligible. While it is acknowledged that Lake Cowichan has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Mitigation measures identified in the fish and fish habitat assessment to address Project-related effects on fish are expected to be effective at addressing potential effects on the availability of fishing resources preferred by Lake Cowichan. Further, as residual effects on fish identified in the fish and fish habitat assessment are not anticipated to affect population integrity, potential residual effects as a result of Project construction activities, would not be expected to measurably affect the availability of preferred fish resources.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of fishing resources preferred by Lake Cowichan; therefore, Potential Project-related effects on Lake Cowichan fishing would be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when fishing are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** are expected to largely address a potential Project-related effect to the quality of experience while fishing. At preferred fishing locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Lake Cowichan.

Section 5.5 Visual Quality predicts that residual effects to visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Lake Cowichan is fishing. As this landscape has been previously modified, the potential Project-related effect on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Lake Cowichan's Aboriginal Interests related to fishing are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.6 Hunting/Trapping

Lake Cowichan report harvesting a range of wildlife species, including mammals such as deer and black bear, small game, fur-bearing mammals and a number of species of wildfowl.

The proposed Project has the potential to affect hunting and trapping through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred hunting and trapping locations by Lake Cowichan as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for hunting and trapping by Lake Cowichan during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to hunting and trapping locations by Lake Cowichan from instream construction activities, are expected to negligible. While it is acknowledged that Lake Cowichan has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations for hunting and trapping by Lake Cowichan resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with hunting and trapping locations.

Mitigation measures identified in the marine mammal and terrestrial wildlife assessments are expected to be effective at addressing potential effects on the availability of hunting and trapping resources preferred by Lake Cowichan. Therefore, Project-related effects on hunting and trapping related to potential changes in the availability of resources would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for hunting and trapping by Lake Cowichan; therefore, Potential Project-related effects on Lake Cowichan fishing would be expected to be negligible.

Project operation is not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when hunting and trapping are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** to address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while hunting and trapping. At preferred hunting and trapping locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Lake Cowichan.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Lake Cowichan is hunting and trapping. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Lake Cowichan's Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.7 Gathering

Sources reviewed provided limited information on Lake Cowichan's harvesting practices. Lake Cowichan reports gathering eelgrass at Roberts Bank in the intertidal zone. Other member bands of the Hul'qumi'num Treaty Group have reported that berries, wapato and bulrushes/reeds were gathered and cultivated by ancestors at *Tl'uqtinus*.

The proposed Project has the potential to affect gathering through changes in access to preferred locations, changes in availability of preferred resources, changes in quality of preferred resources and changes in quality of experience when gathering.

Potential changes in access to preferred gathering locations by Lake Cowichan as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for gathering by Lake Cowichan during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to gathering locations by Lake Cowichan from instream construction activities, are expected to be negligible. While it is acknowledged that Lake Cowichan has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations for gathering by Lake Cowichan resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with gathering locations.

Mitigation measures identified in the vegetation assessment to address Project-related effects on terrestrial vegetation are expected to be effective at addressing potential effects on the availability of resources for the exercise of Aboriginal Interests related to gathering. Therefore, Project-related effects on gathering related to potential changes in the availability of vegetation would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for gathering by Lake Cowichan; therefore, Potential Project-related effects on gathering related to potential changes in the quality of resources would therefore be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when gathering are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while gathering. At preferred gathering locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Lake Cowichan.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Lake Cowichan is gathering. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Lake Cowichan's Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.8 Archaeology and Cultural Heritage Interests

No information on Lake Cowichan's interests with respect to archaeology and cultural heritage were identified in the study prepared for this Project, *Ts'uubaasatx Interest: George Massey Tunnel*, or in publicly available sources; however, the proposed Project has the potential to affect Lake Cowichan's Aboriginal Interests related to archaeology and cultural heritage through changes in access to preferred locations and changes in quality of experience.

Potential changes in access to locations related to Lake Cowichan's archaeological and cultural heritage interests as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations related to Lake Cowichan's interests related to archaeology and cultural heritage during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to locations related to Lake Cowichan’s archaeological and cultural heritage interests from instream construction activities are expected to be negligible. While it is acknowledged that Lake Cowichan has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations related to Lake Cowichan’s archaeological and cultural heritage interests resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and not expected to overlap with locations related to Lake Cowichan’s archaeological and cultural heritage interests.

With regard to noise, mitigation measures proposed in in **Section 4.10 Atmospheric Noise** would also be expected to address the potential Project-related effect to the quality of experience while undertaking activities related to cultural heritage. At locations related to Lake Cowichan’s archaeological and cultural heritage interests that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Lake Cowichan.

As reported in **Section 6.1 Heritage Resources**, no archaeological or historical sites were identified within the Project area during fieldwork; however, there may be other locations with intangible cultural value or meaning to Lake Cowichan (e.g., spiritual or storied sites, named places) potentially affected by the Project. In addition, physical alterations to the landscape may affect archaeological or historical sites, and how this landscape is experienced culturally.

As a result, mitigation measures proposed in Part B are not expected to address a potential incremental and permanent Project-related effect tied to Lake Cowichan’s Aboriginal Interests related to archaeology and cultural heritage that may be associated with the introduction of a new prominent feature to the cultural landscape. As this landscape has been previously modified by anthropogenic changes, the potential incremental Project-related effect on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal, but permanently disruptive for Lake Cowichan, who have identified a historical connection to, and continued or desired use of, sites or places that help define the cultural landscape in the Project area.

Additional mitigation to address this potential incremental effect that is not otherwise addressed in the Application is proposed in **Section 10.1.3.4** and summarized below under Mitigation.

5.0 Mitigation

This section provides a summary of mitigation measures identified to address potential Project-related effects on the exercise of Aboriginal Interests by Lake Cowichan First Nation. For a more detailed discussion, refer to **Section 10.1.3.4 Mitigation**.

Mitigation measures identified for the relevant VCs and ICs in Part B of the Application were reviewed to assess their effectiveness at addressing potential Project-related effects on the exercise of Aboriginal Interests related to those VCs. Examples of mitigation that are proposed in the Application to address potential effects on VCs and ICs, with the potential to result in an effect on Aboriginal Interests, include:

- Avoiding fisheries sensitive timing windows during key Project activities.
- Developing a Marine Access Management Plan to ensure marine use activities, including those supporting Aboriginal Interests, can continue during Project construction.
- Scheduling activities with the potential to generate underwater noise to avoid potential effects on marine mammals.
- Development and implementation of a Terrestrial Vegetation and Wildlife Management Plan with measures to minimize disturbance and loss of vegetation, prevent soil compaction, and minimize clearing in order to minimize effects on vegetation.

These measures are expected to be largely effective at avoiding, reducing, or otherwise managing potential Project-related effects on the exercise of Aboriginal Interests during Project construction and operation.

Recognizing some measurable effects on Lake Cowichan First Nation's Aboriginal Interests could remain following the application of mitigation to address potential effects on the relevant VCs and ICs in Part B, the following additional measures have been identified to address such effects:

- Ongoing consultation with Lake Cowichan regarding proposed measures, management plans, and monitoring programs related to intermediate components and valued components assessments; and
- Development of a Cultural Heritage Management Plan.

6.0 Residual Effects

With the implementation of mitigation measures identified in **Section 10.1.3.4** and summarized above, residual adverse effects of the proposed Project on the exercise of Aboriginal Interests are expected to be negligible (i.e., not measurable or detectable), and are not further assessed.

7.0 Summary and Conclusion

Part C of the Application builds on consultation undertaken to date to understand Lake Cowichan First Nation's Aboriginal Interests and provides for an assessment of potential Project-related effects of the Project on Aboriginal Interests.

The Ministry began consultations with Lake Cowichan prior to the submission of the Project Description, which is the end of the Initial Consultation Phase. Both EAO and the Ministry consulted with Lake Cowichan during the Pre-Application Phase, which concluded with the submission of the Application. The main concerns expressed by Lake Cowichan during consultations include:

- Capacity funding for Traditional Use Study and to facilitate participation in the Project review process;
- Protection of archaeological and heritage resources and opportunities for cultural recognition and naming;
- Aboriginal participation and Project-related opportunities;
- Effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon;
- Social effects of the Project on Lake Cowichan's ability to transfer knowledge, language and participate in socio-cultural practices;
- Consideration of cumulative effects on Aboriginal rights;
- Concerns related to dredging, potential for increased vessel traffic and larger vessels resulting from Tunnel decommissioning;
- Potential effects on flow rates after Tunnel removal;
- Potential effects of run off and drainage along the highway corridor, including heavy metal transport from traffic to water and land, management of runoff from the bridge;
- Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations;
- Potential for public safety concerns related to potential for creation of increased criminal activity and need for appropriate safety/suicide fencing;

- Potential effects of the bridge structure, lighting, and noise on terrestrial wildlife, marine mammals, waterfowl, and migratory birds;
- Inclusion of culturally significant plants in planting plans and opportunity for Lake Cowichan in the identification of plants, and planting work. Need for management of invasive plant species;
- Increase in traffic, and consequent increase in associated noise and vibration due to the increases capacity of the new bridge;
- Concern with increased water temperatures in the Fraser River and the importance of opportunities to provide additional shade along the river; and
- Potential effect of removing the Tunnel on marshes along the river.

Based on information provided by Lake Cowichan and other publicly-available sources, the Ministry developed a summary of past, present and desired future use of the proposed Project area and its surroundings for the purposes of fishing, hunting/trapping, gathering, archaeology and cultural heritage interests and other related interests. This summary indicates that Lake Cowichan has, does and intends to continue to use the Fraser River for cultural purposes.

Relying first on the results of the effects assessments for related VCs and ICs in Part B, the assessment of potential effects of Lake Cowichan First Nation's Aboriginal Interests considered four indicators:

1. Access to preferred locations for the exercise of Aboriginal Interests;
2. Availability of preferred resources for the exercise of Aboriginal Interests;
3. Quality of preferred resources for the exercise of Aboriginal Interests; and
4. Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests.

As reviewed in **Section 10.1.3.3** and **Section 10.1.3.4**, the mitigation measures, management plans, and monitoring programs identified in Part B of the Application for ICs or VCs linked to the exercise of Aboriginal Interests are expected to be largely effective at addressing the incremental Project-related effects noted above on the exercise of Aboriginal Interests by Lake Cowichan First Nation, except in the following potentially measurable cases:

- Project construction:
 - Potential temporary direct (minor) effect on quality of experience related to construction-related noise and a potential temporary indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance

- Project operation:
 - Potential permanent direct (minor) effect on quality of experience related to traffic noise and a potential indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance while engaged in those uses
 - Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses.

The following additional measures have been identified to address the above-noted effects:

- Ongoing consultation with Lake Cowichan regarding proposed measures, management plans, and monitoring programs related to IC and VC assessments; and
- Development of a Cultural Heritage Management Plan.

With the implementation of mitigation proposed to address potential effects on VCs and ICs, as well as additional mitigation proposed to address potential residual effects on Aboriginal Interests, no effects on the exercise of Aboriginal Interests by Lake Cowichan, as a result of the Project, are expected.

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. *Environmental Assessment Act* (B.C. *EAA*), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. *EAA* sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. *EAA*, and that it requires an EAC.

The Project as proposed is not subject to review under the *Canadian Environmental Assessment Act, 2012*, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|--------------------------------------|
| In addition to the funding provided by the Proponent, Lake Cowichan requires funding for participation in EAO's own process. | The Ministry provided funding to Lake Cowichan for the Pre-Application Phase. Funding for the Application Review Phase will be provided. Funding provided by the proponent is inclusive of EAO-led activities. | Addressed | Funding for Application Review Phase |

| ABORIGINAL INTERESTS | | | |

| Consideration of cumulative effects on aboriginal rights | The Ministry's cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|-----------------------------|
| <p>Importance of maintaining and protecting traditional historical access to the Project area. Future aspirations of Ts'uubaasatx to learn about and exercise their rights in the Project area as the community grows.</p> <p>"Ts'uubaasatx members not only want to maintain and assert their aboriginal right to camp, hunt, fish and otherwise move about in the area of the George Massey Tunnel, they hope someday, the area will be restored as a healthy habitat that they can utilize for food gathering purposes, once again."</p> | <p>The Ministry will work closely with Aboriginal Groups to ensure the protection of Aboriginal rights within the project area.</p> <p>The Ministry will work with Aboriginal Groups on Project components, such as environmental enhancement, in an effort to support healthy habitat for current and future use by Ts'uubaasatx and other Aboriginal Groups.</p> | <p>Addressed</p> | <p>Ongoing consultation</p> |
| <p>Importance of Project area for trade both in terms of historic and current/future significance (ł̓aq̓tinəs/Tl'uqtinus was a "little New York")</p> | <p>Noted</p> | <p>Noted</p> | <p>None</p> |

| Capacity funding to facilitate participation in the Project review process | Lake Cowichan received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Appropriate use of information shared by Lake Cowichan First Nation as it relates to confidentiality and dissemination | The Ministry understands and respects that certain information shared by Lake Cowichan may be considered confidential. The Ministry is subject to the provisions of the Freedom of Information and Protection of Privacy Act. However, subject to the requirements of applicable laws, the Ministry will respect Lake Cowichan requests to keep information confidential. | Addressed | Appropriate use of confidential information |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|-------------------------|
| Funding for Traditional Use Study | The Ministry signed funding agreements with the members of the Lake Cowichan which provided funding for a Traditional Use Study. | Addressed | None |
| Importance of continued engagement with Aboriginal Groups on matters of importance and on success of mitigation and enhancements. “There is a need for reporting out on post-construction monitoring. This should be provided to us in the form of meetings and in writing” | Mitigation and environmental protection programs are addressed in the Application. Reporting requirements will be determined. The Ministry will undertake further discussions with Aboriginal Groups regarding post-construction monitoring and reporting. | Addressed | Ongoing consultation |

ABORIGINAL PARTICIPATION AND PROJECT-RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project's Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

- Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests
- Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes
- Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns
- Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes
- Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects
- Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.
- Incorporate community and traditional knowledge in Project components
- Document and report to EAO on the Ministry's Aboriginal consultation program at times specified by EAO.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------|--|
| Opportunities for cultural recognition and naming | The Ministry is exploring opportunities for cultural recognition and naming and will work with Lake Cowichan on this matter. | Ongoing | Discussion with Lake Cowichan to explore opportunities related to cultural recognition and naming, art and interpretive signage |
| Project-related employment, training, contracting, and economic development opportunities. Equity and revenue sharing for Aboriginal Groups and importance of initiating related discussions with Aboriginal Groups during the Pre-Application Stage. | The Ministry is committed to working with Lake Cowichan to identify potential opportunities to benefit from the Project. Ministry acknowledges that Aboriginal Groups want to prepare their membership for employment opportunities and will work with Lake Cowichan to identify ways to support community preparedness. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful. |
| Adequate training time to take full advantage of potential future Project work activities. Opportunities for training related to traditional activities. | The Ministry is committed to working with Lake Cowichan First Nation to identify potential opportunities to benefit from the Project. The Ministry has initiated discussions with Lake Cowichan First Nation regarding Project-related benefits and opportunities. | Ongoing | The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful. |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|--|
| <p>Change in flow rates after Tunnel removal</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm.</p> <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. River Hydraulics and River Morphology are addressed in Section 4.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.1.4 (River Hydraulics and River Morphology Mitigation Measures)</p> |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|--|
| Potential effects of run off and drainage | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected.</p> <p>Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> | Addressed in Application | Implementation of mitigation measures outlined in Section 4.2.4 (Sediment and Water Quality Mitigation Measures) |
| Impacts of the River from potential pollutants and contaminants on the Tunnel walls if left in place | The tunnel decommissioning is anticipated to involve the removal of the four in-river sections of the Tunnel. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|-------------------------|
| <p>Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River.</p> | <p>Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> | <p>Addressed in Application</p> | <p>None</p> |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

- A negligible effect on the availability of fish resources for traditional use has been determined.
- A negligible effect on quality of fish resources for traditional use has been determined.
- A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

- Avoid effects through Project design.
- Apply best management and environmental management practices.
- Develop Construction Environmental Management and Operational Environmental Management plans.
- Use timing windows for undertaking in-stream works.
- Erosion and sediment control.
- Habitat enhancement and offsetting.

Residual & Cumulative Effects

- There is a low, short-term probability of physical injury or mortality to fish through crushing or entrainment during the construction period.
- No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|---|
| Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon | The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to the Lake Cowichan. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in 4.4.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|--------------------------|---|
| Fish mortality from pile driving and blasting | The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. Mitigation, including timing windows for undertaking in-stream work and other measures outline in Project-related Environmental Management Plans, will ensure that potential effects on fish and fish habitat are effectively addressed. Fish mortality should not be a significant issue during pile driving. | Addressed in Application | Implementation of mitigation measures outlined in 4.4.4 |
| Effects of pile driving on salmon migration | Pile driving should not have an impact on salmon migration. | Addressed in Application | Implementation of mitigation measures outlined in 4.3.4 and 4.4.4 |
| Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon | Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in 4.3.4 and 4.4.4 |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conservation interest, including southern resident killer whales, do not occur in the Fraser River.

Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as impact pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.

Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|--|
| <p>Impact on marine mammals such as the Stellar Sea Lion</p> | <p>Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 mms. Standard industry and best management practices will be applied to activities such as impact pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to. Marine Mammals are addressed in Section 4.6 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.6.4</p> |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail march that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management.

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|--------------------------|---|
| Invasive plant species and proposed plans to manage presence during construction | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|---|
| <p>Inclusion of culturally significant plants in planting plans and opportunity for Lake Cowichan in the identification of plants, and planting work. Lake Cowichan has the capacity to undertake this type of work.</p> | <p>Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans.</p> | <p>Addressed</p> | <p>Develop planting plans with consultation from Aboriginal Groups</p> |
| <p>Ministry’s hydro-seeding spray contains invasive grasses that will damage new plants and add to the problem of invasive plants.</p> | <p>The Ministry will review its hydro seed mixes.</p> | <p>Addressed</p> | <p>Review hydro-seed mixes</p> |
| <p>Potential effect of removing the Tunnel on marshes along the river</p> | <p>Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. Creating comparable habitat within the Project alignment will offset unavoidable potential Project-related effect, which is limited to a small reduction in area of the cattail marsh that overlaps with Project components. Vegetation is addressed in Section 4.7 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.7.4 (Vegetation Mitigation Measures)</p> |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.

There is a low, long-term probability of barn owl mortality.

No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|------------------|--|
| <p>Potential light and noise effects on wildlife and fish.</p> | <p>The Ministry understands that Lake Cowichan is concerned with the potential effects of light and noise on species such as waterfowl, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |
| <p>Potential effects of the bridge structure on species such as waterfowl and migratory birds.</p> | <p>The Ministry understands that Lake Cowichan is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application.</p> | <p>Addressed</p> | <p>Implementation of mitigation measures outlined in Section 4.8.4</p> |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.

The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today.

Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.

Effects

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

Mitigation

Minimize effects through Project design.

Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.

Measure and monitor vehicle emissions and road dust during Project operation.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on air quality are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|------------------|-------------------------|
| <p>Congestion and air quality issues – support for improved transit and anything that reduces idling.</p> | <p>Automobile emissions are currently released from the Tunnel through a series of vents. Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | <p>Addressed</p> | <p>None</p> |

4.10 ATMOSPHERIC NOISE

The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.

Effects

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

Mitigation

Minimize effects through Project design.

Adhere to construction best practices and the Ministry's 2014 *Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways*.

Develop and implement a Noise Management Plan.

Residual & Cumulative Effects

With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|--------------------------|--|
| Potential impacts of noise from pile driving and blasting | The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Mitigation in accordance with the Ministry's 2014 Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways will be implemented, as warranted, at select locations to avoid or minimize potential Project-related increase in post-construction noise levels. Atmospheric Noise is addressed in Section 4.10 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in 4.10.4 |

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|---------------------------------|---|
| <p>Increase in traffic, and consequent increase in associated noise and vibration due to the increases capacity of the new bridge</p> | <p>The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new Bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment, after mitigation, are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the Highway but do not exceed what is acceptable for residential, educational or institutional facilities. Atmospheric Noise is addressed in Section 4.10 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.10.4</p> |

5.2 MARINE USE

The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.

A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.

Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.

Effects

, a negligible effect on access to instream locations for traditional use has been determined.

, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.

Establish communications protocols to advise in-stream construction activities.

Ensure appropriate lighting and marking for safe navigation.

Establish navigation protection zones during construction to avoid or minimize impact on marine use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|------------------|---|
| <p>Potential effects of construction during fishing season on fishing activities. Effects of construction and decommissioning-related barging activities on Lake Cowichan fishing.</p> | <p>Potential interference with Lake Cowichan fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |

5.3 LAND USE

The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.

The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.

Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewsapes.

The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Minimize effects through Project design.

Residual & Cumulative Effects

There is a low, short-term probability of disturbance to residential, commercial and industrial land use during construction.

There is a moderate , short-term probability of disturbance to recreational users near the new bridge during construction

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---------------------------|--------|-------------------------|
| Lake Cowichan has not voiced any specific issues or concerns with respect to Land Use | | | |

5.5 VISUAL QUALITY

The new bridge will add noticeable visual features to the landscape and will change visual conditions adjacent to the Project alignment. Replacement of interchanges also has the potential to change visual conditions of these locations. At distances greater than one kilometer, the bridge deck will merge with the natural landscape and the main visual features will be the bridge towers. Changes in visual quality at interchanges will be minor as visual quality in such areas is currently influenced by existing transportation infrastructure.

Effects

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Minimize effects through Project design.

Use of vegetated buffers to minimize visual effects to residential developments within close proximity to the bridge in Delta.

Residual & Cumulative Effects

There is a moderate, long-term probability of disturbance to visual quality.

No significant Project-related residual or cumulative effects on marine access are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---------------------------|--------|-------------------------|
| Lake Cowichan has not voiced any specific issues or concerns with respect to Visual Quality. | | | |

6.1 HERITAGE RESOURCESE

The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.

Effects

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

No to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

A measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.

Mitigation

Develop and implement a Heritage Resources Management Plan, which will include a change find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.

Undertake additional archaeological surveys.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on heritage resources are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---------------------------------|---|
| <p>Protection of archaeological and heritage resources, including intangible heritage sites.</p> <p>Protection of cultural and archaeological sites that are known to exist or may be discovered within the Project area. No more tolerance for further disturbance of archaeological sites in the overdeveloped Lower Mainland. This includes disturbed and intact sites.</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Lake Cowichan.</p> <p>All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment.</p> <p>Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------|--|
| Participation in archaeological fieldwork and review of archaeological draft reports. Importance of having a cultural person, known to LCFN and LFN, participate in archaeological work. | Lake Cowichan participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports. | Addressed | Lake Cowichan will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports. |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improvement connectivity and access, improved emergency response, and economic development opportunities.

Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

During construction, a measureable effect on access to instream locations for traditional use has been determined.

7.0 HUMAN HEALTH

During construction, a measurable effect on quality of experience tied to access of instream locations for traditional has been determined.

During operation, a negligible effect on access to instream locations for traditional use has been determined.

During construction, a negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects.

Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

Residual & Cumulative Effects

No significant Project-related residual or cumulative effects on human health are expected.

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|---|
| New bridge will result in increased suicide attempts | <p>The Ministry is in the process of developing a policy in which new bridges in the Lower Mainland will require the installation of safety barriers. The Ministry is committed to including safety barriers as part of the design of the new bridge and will continue to discuss additional measures with Lake Cowichan.</p> <p>Assessment of potential Project-related effects on human health, including community and social factors, are presented in Section 7.1 of the Application.</p> | Addressed | <p>Development of safety barrier policy for new bridges in the Lower Mainland.</p> <p>Implementation of mitigation measures outlined in Section 7.1</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|---|------------------|-------------------------|
| <p>Creation of areas of increased criminal activity, particularly attraction of the shadow population/marginalized groups</p> <p>“Elders have expressed concern that bridge footings and covered areas will create places used by drug users and prostitutes”.</p> <p>“The tunnel is a bottleneck and removing it will bring in more drug trafficking into Delta. I am shocked that the municipalities haven’t stood up on this one”.</p> | <p>While not assessed as a Value Component in the Application, the potential for “at-risk populations” to use/congregate in areas near the bridge will be considered in Section 7.1 of the Application.</p> | <p>Addressed</p> | <p>None</p> |

| 8.0 ACCIDENTS AND MALFUNCTIONS | | | |
|--|---|---------------|--|
| <p>Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.</p> <p>In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | An Emergency Response and Spill Contingency Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills | Addressed | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |

| OTHER ISSUES | | | |
|--|---|---------------|--------------------------------|
| Consultation with Kwantlen First Nation identified issues outside of the environmental assessment process, Aboriginal Interests, Aboriginal Consultation, Aboriginal Participation and Project-Related Opportunities, and sections of the Application. | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Congestion at Richmond-Vancouver border | Traffic analysis shows that approximately 60 per cent of northbound morning Tunnel traffic is destined to Richmond, and that traffic volumes at the Oak Street and Knight Street bridges have been declining since 2010. While Oak Street is likely to remain congested due to signal lights at Oak Street and 70th Avenue in Vancouver, the Project is not expected to result in more traffic driving over Oak Street Bridge each day. The new replacement bridge and the Highway 99 improvements will increase the convenience of accessing transit and provide an efficient route to the Canada Line stations in Richmond for commuters continuing to Vancouver. Traffic is addressed in Section 5.1 of the Application. | Addressed | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|-----------------------------------|--|-----------|-------------------------|
| Length of time tolls are in place | <p>The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application.</p> | Addressed | None |

APPENDIX H

Lyackson First Nation

Introduction

This appendix provides a summary of the information presented in Part C Aboriginal Consultation (Part C) of the Application for an Environmental Assessment Certificate (the Application) regarding the assessment of effects on Aboriginal Interests. Aboriginal Interests are defined as asserted or determined Aboriginal rights, including title, or treaty rights. This appendix presents the information specific to Lyackson First Nation (Lyackson).

The organization of the information presented generally follows Part C and includes the following sections:

- Consultation;
- Community Profile;
- Existing Conditions;
- Potential Effects;
- Mitigation;
- Residual Effects; and
- Summary and Conclusion.

For more detailed information on the effects assessment on Aboriginal Interests related to Lyackson, refer to the following sections of Part C:

- Consultation with Lyackson (**Section 10.1.2.10**);
- Lyackson community profile (**Section 10.1.1.6**);
- Description of existing Lyackson Aboriginal Interests (**Section 10.1.3.2**);
- Assessment of potential effects of the Project on the exercise of Lyackson Aboriginal Interests (**Section 10.1.3.3**);
- Mitigation relating to potential effects on Aboriginal Interests (**Section 10.1.3.4**); and
- Residual effects on Lyackson Aboriginal Interests following application mitigation (**Section 10.1.3.5**).

A summary of Aboriginal Interests Assessment for Lyackson is also provided in **Section 10.1.3.8**.

The summary presented in this appendix also incorporated information found in the Lyackson Overview Table (**Appendix H2**), which provides detailed information regarding:

- Lyackson's issues and concerns identified to date;
- Identification of potential effects on VCs and ICs that relate to the assessment of effects on Lyackson's Aboriginal Interests;
- The Ministry's response to specific issues and concerns raised by Lyackson;
- The status of these issues and concerns; and
- Next steps required to address outstanding issues and concerns.

Consultation

This section provides information regarding the consultation activities that the EAO and Ministry carried out prior to submission of the Application.

EAO-led Consultation Activities

Capacity Funding

When a provincial agency is a proponent of a project going through a provincial EA under the British Columbia *Environmental Assessment Act* (BCEAA), that agency provides funding to Aboriginal Groups to support their involvement in pre-Application and Application review phases in place of EAO providing such funding. The Ministry's provision of capacity funding is discussed in the following section, Proponent-led Consultation Activities.

Participation in Working Group

EAO invited Lyackson and all other Aboriginal groups identified in Schedule B of the Section 11 Order to participate as members of a Working Group.

During the Pre-Application stage, Lyackson attended two EAO-led Working Group meetings where the Ministry presented information on the Project and the environmental assessment process and received and responded to comments on those presentations.

The first Working Group meeting, held January 2016, focused on the environmental assessment process, Project overview and update, Key Areas of Study, draft Application Information Requirements overview, and preliminary conclusions from study results.

The second working group meeting, held March 2016, focused on the environmental assessment process, list of materials available on the Project website, review of comments received on, and resulting changes to, the draft Application Information Requirements, and a description and rationale of the assessment areas. Working Group comments raised by Lyackson in relation to the draft Application Information Requirements resulted in Aboriginal groups being invited to participate in river-otter related fieldwork in April 2016. The objectives of this work were to document river otter presence or potential presence within the Regional Assessment Area, document and describe use of riparian and high use areas and identify potential Project-related effects.

Lyackson also participated in the completeness review of the Application that considered whether the Application included information requirements set out in the Application Information Requirements.

It is anticipated that Lyackson will continue as an active member of the Working Group through the environmental assessment process.

Proponent-led Consultation Activities

The Ministry began consultation with Lyackson in early 2014 in order to identify the nature and scope of Lyackson’s Aboriginal Interests and how they might be impacted by the Project. Following is a summary of consultation activities led by the Ministry with Lyackson. A more detailed discussion is provided under the Lyackson section in Section 10.1.2.10 Overview of Consultation with each Schedule B Aboriginal Group. The following sections represent the main activities undertaken in support of Proponent-led consultation and include the following:

- Provision of capacity funding;
- Traditional use, traditional knowledge and other studies;
- Examples of Consultation Activities; and
- Concerns Identified to Date.

Capacity Funding

The Ministry entered into a Participation Funding Agreement, including the Initial Consultation and Pre-Application phases for consultation, with Lyackson. The Ministry has been working with Lyackson regarding their needs for capacity funding to facilitate their participation in the Application Review Phase. Consultation activities that are anticipated to be undertaken during the Application Review phase that will be supported by capacity funding include participation in technical reviews and analyses, involvement in ongoing consultation activities, and presentation of key information regarding their respective Aboriginal Interests.

Traditional Use, Traditional Knowledge & Other Studies

The Ministry provided additional funding to Lyackson for the preparation and submission of the traditional use study “*Preliminary Lyackson Use and Occupancy Mapping Study for BC MOTI’s George Massey Tunnel Replacement Project*”. The purpose of such studies is to identify Aboriginal input and traditional knowledge for inclusion and consideration in the EA. In addition, studies were funded to enhance the Ministry’s understanding of Aboriginal Interests and Aboriginal Group’s past, present and desired future use as it pertains to the exercise of Aboriginal Interests within the Project area and the potential adverse effects on identified Aboriginal Interests.

Examples of Consultation Activities

A number of consultation activities were undertaken with Lyackson during both the Initial Consultation Phase and the Pre-Application Consultation Phase as follows:

Initial Consultation Phase Activities - The Ministry recognized the importance and value of early engagement with Schedule B Aboriginal Groups and undertook an Initial Consultation Phase prior to the Pre-Application Phase. The Initial Consultation Phase concluded in December 16, 2015 with submission of the Project Description and Key

Areas of Study. The focus of the Initial Consultation Phase was collection of baseline information and sharing of draft EA-related documents (i.e. Project Description and Key Areas of Study, draft Application Information Requirements (dAIR). The main consultation activities the Ministry undertook with Lyackson included:

- Sharing of Project-related information including focused presentation on topics on interest and/or concern to Lyackson;
- Funding for Lyackson’s participation in Project consultation activities and EA process;
- Site visit;
- Review of draft EA documents such as the Project Description, Heritage Resources Overview Assessment/Archaeological Overview Assessment, Heritage Resources Assessment, dAIR and Aboriginal Consultation Plan;
- Meetings with Lyackson staff and consultants; and
- Response and follow up with Lyackson regarding the identification and resolution of issues.

Pre-Application Consultation Phase Activities - The Pre-Application Consultation Phase began with the filing of the Project Description and concluded with the submission of the Application. This phase included the issuance of the Section 11 Order, AIR development and collection of baseline information (may include submission of permit applications). The main consultation activities the Ministry undertook with Lyackson included:

- Sharing of Project-related information including focused presentation on topics on interest and/or concern to Lyackson;
- Funding for Lyackson’s participation in Project consultation activities and EA process;
- Meetings with Lyackson leadership, staff, consultants, elders and membership;
- Lyackson participation in the EA Working Group;
- Review of draft EA documents such as the Application Information Requirements (AIR), Aboriginal Consultation Plan, and Aboriginal Consultation Reports; and
- Response and follow up with Lyackson regarding the identification and resolution of issues.

Concerns Identified to Date

As outlined above, Lyackson’s concerns, identified through consultation undertaken to-date, are presented in **Appendix H2 Lyackson First Nation Overview Table**. The Ministry’s response to Lyackson’s key concerns regarding potential impacts on Lyackson’s Aboriginal Interests are outlined below:

Table 1: Concerns Identified to Date

| Concerns Identified to Date | Response |
|---|--|
| Protection of Lyackson First Nation’s rights to harvest within the Project area. | Lyackson’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures in Sections 4.4 (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife, residual effects on the exercise of Aboriginal Interests by Lyackson as a result of the Project are not expected. |
| Aboriginal participation and Project-related opportunities <ul style="list-style-type: none"> ○ Potential employment, training, contracting and economic development opportunities ○ Community preparedness ○ Importance of ʔəqtinəs/TI’uqtinus (was a “little New York”) near the Project area for trade both in terms of historic and current/future significance ○ Cultural recognition and naming | The Ministry is committed to working with Lyackson to identify potential employment, training, contracting and economic development opportunities and to identify ways to support community preparedness. The Ministry notes Lyackson’s comments regarding the importance of ʔəqtinəs/TI’uqtinus. The Ministry is exploring opportunities for cultural recognition and naming and will work with Lyackson on these opportunities. |
| Environmental Assessment (EA): <ul style="list-style-type: none"> ○ Adequacy of methodology to address social and cultural effects ○ Process and associated timelines ○ Current volume of EAs underway ○ Strength of claim | The Ministry acknowledges the importance of Lyackson’s involvement in the environmental assessment process. Lyackson’s concerns related to Environmental Assessment including the adequacy of methodology to address social and cultural effects, process and associated timelines, volume of EAs underway, and strength of claim are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO). |
| Consideration of cumulative effects on Aboriginal rights | The Ministry’s cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, |

| Concerns Identified to Date | Response |
|---|--|
| | <p>identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed.</p> |
| <p>Effects to fish and fish habitat</p> <ul style="list-style-type: none"> ○ Importance of fish and fish habitat including species of cultural and economic importance such as eulachon, sturgeon and salmon ○ Potential effects of pile driving, blasting and underwater noise generated by Tunnel decommissioning and other construction activities | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon, salmon to Lyackson and is committed to avoiding or mitigating any potential effects.</p> <p>The Ministry designed a clear span bridge over the Fraser River South Arm and Deas Slough to avoid or minimize Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Lyackson's Fisheries Department continues to be very helpful in the review of Green Slough concepts.</p> <p>As outlined in Section 4.3 (Underwater Noise), sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources will be effectively mitigated by scheduling activities during period of low tide, when work can be completed under shallow water conditions or in the dry.</p> |
| <p>Impact on marine mammals such as the Stellar Sea Lion</p> | <p>Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no</p> |

| Concerns Identified to Date | Response |
|--|--|
| | more than 7.5 kms. Standard industry and best management practices will be applied to activities such as impact pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to. Marine Mammals are addressed in Section 4.6 of the Application. |
| Potential effects of construction during fishing season on fishing activities. Effects of construction and decommissioning-related barging activities on Lyackson fishing. | Lyackson's access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8). Mitigation measures are outlined in Section 5.2.4 (Marine Use Mitigation Measures) of the Application. |
| Potential effects on Fraser River flow rates after Tunnel removal | Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Flow rates are discussed in Section 4.1 (River Hydraulics). |
| Potential effects of run off and drainage | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation.</p> <p>During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.</p> <p>Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking in-stream works, will ensure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application.</p> |
| New bridge will result in increased suicide | The Ministry is in the process of developing a policy in which new bridges in the Lower |

| Concerns Identified to Date | Response |
|--|--|
| attempts | Mainland will require the installation of safety barriers. The Ministry is committed to including safety barriers as part of the design of the new bridge and will continue to discuss additional measures with Lyackson. Assessment of potential Project-related effects on human health, including community and social factors, are presented in Section 7.1 of the Application. |
| Creation of areas of increased criminal activity, particularly attraction of the shadow population/marginalized groups | While not assessed as a Value Component in the Application, the potential for “at-risk populations” to use/congregate in areas near the bridge will be considered in Section 7.1 of the Application. |

Community Profile: Lyackson First Nation

The Lyackson First Nation has three reserves, all on Valdes Island (*Le’eyqsun*), which lies approximately 45 km west of the Project area on the east side of the Strait of Georgia, directly opposite the mouth of the Fraser River. Over 90% of Lyackson First Nation’s registered membership lives off reserve, principally on southeastern Vancouver Island. The Project area does not overlap any current or former Lyackson First Nation reserve lands.

The Lyackson First Nation has described *Le’eyqsun* as their homeland and ancestral territory, one in which they continue to engage in traditional practices on a seasonal basis.

Based on their affiliation with the Hul’qumi’num Treaty Group, the Lyackson First Nation has been associated with a collective traditional territory with the other member First Nations of that group. The core territory of the Hul’qumi’num Treaty Group overlaps the Project area at the Tunnel crossing.

The other members of the Hul’qumi’num Treaty Group – namely, Cowichan Tribes, Halalt First Nation, Penelakat Tribe, and Stz’uminus First Nation – are working jointly on their Fraser River interests through the Cowichan Nation Alliance. Lyackson First Nation is engaging with the Ministry on the Project separately from the Cowichan Nation Alliance.

Lyackson Aboriginal Interests: Existing Conditions

This section provides a high level of summary of past, present, and desired future use of the proposed Project area and surroundings for traditional purposes that are or may be

connected with the exercise of Lyackson’s Aboriginal Interests. A more detailed discussion, including sources used, is provided under Lyackson in Section 10.1.3.2 Existing Conditions.

Fishing

- *Hul’qumi’num Mustimuhw*, which includes the Lyackson First Nation, resided around the Fraser River estuary for all or part of the annual salmon runs (April through October).
- The Fraser River, from its mouth up to Seabird Island (east of Chilliwack), has been described as a key fish and shellfish harvesting area for Lyackson, with Canoe Passage (*Hwlhits’um*) identified as particularly important for salmon fishing. Areas within the wider Fraser River estuary were also utilized by *Hul’qumi’num*-speaking peoples for fishing salmon, sturgeon, groundfish, halibut, and other marine resources on the foreshore.
- Access to sockeye for Hul’qumi’num Treaty Group member bands for food, social, and ceremonial (FSC) purposes is said to be provided annually by Fisheries and Oceans Canada (DFO) in Johnstone Strait and “off the mouth of the Fraser River”. In the vicinity of the Project area, however, access has been subject to negotiations with First Nations local to the lower Fraser River, and has been limited, occurring only in 2005, 2006, and 2008.
- Lyackson First Nation has said that the mouth and South Arm of the Fraser River is currently the source of over 50% of their current subsistence salmon catch; however, they say fishing in the Fraser River area has become largely unavailable to them due in part to low present-day fish populations and the cost of boats and technology.
- Lyackson First Nation currently participates in the Hul’qumi’num Fisheries Limited Partnership (HFLP), a commercial fishing business. Species harvested through this enterprise are crab, prawn, halibut, herring, rockfish, sablefish, and salmon. Commercial fisheries for halibut and sablefish are generally undertaken off the west coast of Vancouver Island. Lyackson First Nation also hold, independently of the HFLP, a commercial licence for red sea urchin and geoduck.

Hunting/Trapping

- Lyackson report that, in the past, they hunted for ducks and geese in the Project area, while deer were hunted farther up the Fraser River.
- Lyackson report currently harvesting ducks, deer, and grouse at Porlier Pass, which they say remains a particularly important marine and terrestrial resource harvesting area for Lyackson given the range of resources that occur there.

Gathering

- Lyackson First Nation has said that members recall harvesting berries (including salmonberries and huckleberries), cattails, and fiddleheads in the Project area.
- Berry-picking sites are said to be currently available to Lyackson at Porlier Pass.

Archaeology and Cultural Heritage Interests

- Lyackson First Nation has identified a number of culturally important places, including *S'utl'qulus* (or *s7etl'keles*), meaning “facing outside,” for the east side of *Le'eyqsun*, and *Kw'ukw'iyukwun*, a fishing area off the southeastern end of *Le'eyqsun*, in the Strait of Georgia. A newly constructed youth camp, where the canoes of their ancestors once lined up in preparation for trips to Fraser River, is also located on the eastern side of *Le'eyqsun*.
- This area includes *Tl'uqtinus*, in the vicinity of the north end of the George Massey Tunnel, opposite Tilbury Island. Lyackson Elders and knowledge holders have described *Tl'uqtinus* as having a powerful and permanent *Hul'qumi'num* *Mustimuhw* trading centre for a number of commodities.

Other Related Interests

- No other related interests in addition to those summarized above were identified from in the sources reviewed for the Project.

Potential Effects

This section provides a summary of the methodology used to identify potential adverse effects of the proposed Project on the exercise of Aboriginal Interests by Aboriginal Groups during Project construction and operation, followed by a summary of potential effects on Lyackson's Aboriginal Interests, specifically. For a more detailed description, refer to Section 10.1.3.3. Potential Effects.

Methodology for Identification of Potential Effects

The first step in the effects assessment on Aboriginal interests was the identification of potential adverse effects on traditional use activities and related interests as a result of Project construction or operation. To evaluate these potential adverse effects, the findings of the following Valued Component (VC) chapters in Part B of the Application were considered, including identified mitigation measures, residual effects, cumulative effects and follow up strategies:

- **Section 4.4 Fish and Fish Habitat**
- **Section 4.6 Marine Mammals**

- **Section 4.7 Vegetation**
- **Section 4.8 Terrestrial Wildlife**
- **Section 5.2 Marine Use**
- **Section 5.3 Land Use**
- **Section 5.5 Visual Quality**
- **Section 6.1 Heritage Resources**
- **Section 7.1 Human Health**

The findings of the following Intermediate Component (IC) chapters were also considered in the assessment:

- **Section 4.1 River Hydraulics and River Morphology**
- **Section 4.2 Sediment and Water Quality**
- **Section 4.9 Air Quality**
- **Section 4.10 Atmospheric Noise**

The assessment of potential adverse effects of the Project on the exercise of Aboriginal Interests, including measures to address those effects, are presented in **Section 10.1.3.3** through **Section 10.1.3.5**, and largely applies the same methods used in Part B of the Application for the IC and VC assessments, as outlined in **Section 3.0 Assessment Methodology**.

In addition to information from the VC and IC assessments that support the assessment of potential effects on Aboriginal Interests, information from a Health Impact Assessment (HIA) undertaken to support Project planning, including mitigation recommendations, has been integrated into the assessment of potential effects on Aboriginal Interests. The HIA for the Project can be found at <https://engage.gov.bc.ca/masseytunnel>. A summary of the key findings is provided in **Section 7.2 Health Impact Assessment**.

Selection of Indicators

Four parameters were chosen as indicators to understand and evaluate potential Project-related effects on the exercise of Aboriginal Interests. The rationale for their selection is presented in the following table.

Table 2: Indicators for the Aboriginal Interests Assessment

| Indicator | Rationale for Selection |
|---|---|
| Access to preferred locations for the exercise of Aboriginal Interests | Project components or activities could result in changes in access to or patterns of travel between traditional use locations on land or water |
| Availability of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in distribution or movement, relative abundance, or habitat area or composition of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |
| Quality of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in the real or perceived quality of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |
| Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests | Project components or activities could result in: (1) direct sensory disturbance to traditional users (e.g., from noise, vibration); and/or (2) indirect changes to cultural practices, customs or traditions – i.e., cultural heritage or the expression and transfer of cultural values or ways of knowing (e.g., language, laws/governance, stories, spiritual beliefs) – tied to the cultural landscape or to the traditional use of specific traditional use locations or resources within that landscape. |

Potential adverse effects on the indicators noted above were analyzed in terms of the type and level of effect that Project components and activities may be expected to have on the exercise of Aboriginal Interests.

For the purposes of this assessment, no effect was understood to mean that no interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests would be expected. Where it was determined that an interaction, and potential effect, could occur, the following definitions were used to guide the characterization of the effect as negligible or measurable:

- Negligible – An interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests may occur, but modifications to the use of preferred options would not be expected.
- Measurable – Modifications to the exercise of Aboriginal Interests at preferred locations or in relation to preferred resources may be needed, and may be considered to be:

- Minor (minimal or temporary modifications may be required to use preferred options),
- Moderate (more frequent or longer term modifications may be required to use preferred options), or
- Serious (permanent or indefinite modifications may be required potentially resulting in the loss of preferred options).

Identified Potential Effects

As noted above, the first step in evaluating potential adverse effects on Aboriginal Interests was a consideration of the findings for relevant Part B VCs, including identified mitigation measures, residual effects, cumulative effects and follow up strategies. The residual effects on with the potential to result in an adverse effect Aboriginal Interests are then carried forward in the assessment. Using the four indicators noted in the previous section, the potential Project-related effects and level of effect predicted in relation to Lyackson’s exercise of Aboriginal Interests remaining after Part B mitigation are as follows:

Table 3: Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests

| | Construction | | Operation | | Residual Potential Effects |
|---|--------------|------------|------------|------------|----------------------------|
| | Negligible | Measurable | Negligible | Measurable | |
| River locations for traditional use as a result of changes to physical characteristics of these locations | ✓ | | ✓ | | |
| Instream locations for traditional use | ✓ | | ✓ | | |
| Upland locations for traditional use | ✓ | | ✓ | | |

Potential Project-Related Effects on Lyackson's Aboriginal Interests

Using the methodology presented in **Section 10.1.3.3 Potential Effects**, Table 7 provides the potential incremental Project-related effects, following mitigation of Project-related effects on Part B VCs and ICs as described in Part B, related to Lyackson's Aboriginal Interests as summarized in Existing Conditions were identified for Project Construction and Operation. A discussion of potential Project-related effects on fishing, hunting/trapping, gathering and archaeology and cultural heritage follows the table.

Table 7: Summary of Potential Project-Related Effects

| Indicator | Potential Project-Related Effect |
|---|---|
| Project Construction | |
| Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> None identified |

Fishing

Lyackson has said that the mouth and South Arm of the Fraser River is currently the source of over 50% of their current subsistence salmon catch. Lyackson currently participates in the Hul'qumi'num Fisheries Limited Partnership (HFLP), a commercial fishing business, Species harvested through this enterprise are crab, prawn, halibut, herring, rockfish, sablefish, and salmon. Commercial fisheries for halibut and sablefish are generally undertaken off the west coast of Vancouver Island. Lyackson also hold, independently of the HFLP, a commercial licence for red sea urchin and geoduck.

The proposed Project has the potential to affect fishing practices through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred fishing locations by Lyackson, as a result of changes in river hydraulics or morphology, are expected to be negligible before mitigation. Potential changes in access to instream locations for fishing by Lyackson during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to fishing locations by Lyackson from instream construction activities are expected to be negligible. While it is acknowledged that Lyackson has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Mitigation measures identified in the fish and fish habitat assessment to address Project-related effects on fish are expected to be effective at addressing potential effects on the availability of fishing resources preferred by Lyackson. Further, as residual effects on fish identified in the fish and fish habitat assessment are not anticipated to affect population integrity, potential residual effects as a result of Project construction activities, would not be expected to measurably affect the availability of preferred fish resources.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of fishing resources preferred by Lyackson; therefore, Potential Project-related effects on Lyackson fishing would be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when fishing are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** are expected to largely address a potential Project-related effect to the quality of experience while fishing. At preferred fishing locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Lyackson.

Section 5.5 Visual Quality predicts that residual effects to visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Lyackson is fishing. As this

landscape has been previously modified, the potential Project-related effect on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Lyackson's Aboriginal Interests related to fishing are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

Hunting/Trapping

Lyackson report currently harvesting ducks, deer, and grouse at Porlier Pass, which they say remains a particularly important marine and terrestrial resource harvesting area for Lyackson given the range of resources that occur there.

The proposed Project has the potential to affect hunting and trapping through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred hunting and trapping locations by Lyackson as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for hunting and trapping by Lyackson during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to hunting and trapping locations by Lyackson from instream construction activities, are expected to be negligible. While it is acknowledged that Lyackson has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations for hunting and trapping by Lyackson resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with hunting and trapping locations.

Mitigation measures identified in the marine mammal and terrestrial wildlife assessments are expected to be effective at addressing potential effects on the availability of hunting and trapping resources preferred by Lyackson. Therefore, Project-related effects on

hunting and trapping related to potential changes in the availability of resources would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for hunting and trapping by Lyackson; therefore, Potential Project-related effects on Lyackson fishing would be expected to be negligible.

Project operation is not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when hunting and trapping are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** to address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while hunting and trapping. At preferred hunting and trapping locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Lyackson.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Lyackson is hunting and trapping. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Lyackson's Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

Gathering

Lyackson has said that members recall harvesting berries, cattails, and fiddleheads in the Project area. Berry-picking sites are said to be currently available to Lyackson at Porlier Pass.

The proposed Project has the potential to affect gathering through changes in access to preferred locations, changes in availability of preferred resources, changes in quality of preferred resources and changes in quality of experience when gathering.

Potential changes in access to preferred gathering locations by Lyackson as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for gathering by Lyackson during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to gathering locations by Lyackson from instream construction activities, are expected to be negligible. While it is acknowledged that Lyackson has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations for gathering by Lyackson resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with gathering locations.

Mitigation measures identified in the vegetation assessment to address Project-related effects on terrestrial vegetation are expected to be effective at addressing potential effects on the availability of resources for the exercise of Aboriginal Interests related to gathering. Therefore, Project-related effects on gathering related to potential changes in the availability of vegetation would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for gathering by Lyackson; therefore, Potential Project-related effects on gathering related to potential changes in the quality of resources would therefore be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when gathering are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while gathering. At preferred gathering locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Lyackson.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Lyackson is gathering. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Lyackson's Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

Archaeology and Cultural Heritage Interests

Lyackson has identified a number of culturally important places in the Strait of Georgia. A newly constructed youth camp, where the canoes of their ancestors once lined up in preparation for trips to Fraser River, is also located on the eastern side of *Le'eyqsun*. Lyackson also notes the importance of *Tl'uqtinus*, in the vicinity of the north end of the George Massey Tunnel, opposite Tilbury Island. Lyackson Elders and knowledge holders have described *Tl'uqtinus* as having a powerful and permanent *Hul'qumi'num* *Mustimuhw* trading centre for a number of commodities.

The proposed Project has the potential to affect Lyackson's Aboriginal Interests related to archaeology and cultural heritage through changes in access to preferred locations and changes in quality of experience.

Potential changes in access to locations related to Lyackson's archaeological and cultural heritage interests as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations related to Lyackson's interests related to archaeology and cultural heritage during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to locations related to Lyackson’s archaeological and cultural heritage interests from instream construction activities are expected to be negligible. While it is acknowledged that Lyackson has reported a desire for higher levels of use in this portion of the river based on historic use, the episodic and short-term access effects that are anticipated as a result of instream Project-related construction activities are not expected to measurably affect their current or desired future use.

Potential changes in access to upland locations related to Lyackson’s archaeological and cultural heritage interests resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and not expected to overlap with locations related to Lyackson’s archaeological and cultural heritage interests.

With regard to noise, mitigation measures proposed in in **Section 4.10 Atmospheric Noise** would also be expected to address the potential Project-related effect to the quality of experience while undertaking activities related to cultural heritage. At locations related to Lyackson’s archaeological and cultural heritage interests that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Lyackson.

As reported in **Section 6.1 Heritage Resources**, no archaeological or historical sites were identified within the Project area during fieldwork; however, there may be other locations with intangible cultural value or meaning to Lyackson (e.g., spiritual or storied sites, named places) potentially affected by the Project. In addition, physical alterations to the landscape may affect archaeological or historical sites, and how this landscape is experienced culturally.

As a result, mitigation measures proposed in Part B are not expected to address a potential incremental and permanent Project-related effect tied to Lyackson’s Aboriginal Interests related to archaeology and cultural heritage that may be associated with the introduction of a new prominent feature to the cultural landscape. As this landscape has been previously modified by anthropogenic changes, the potential incremental Project-related effect on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal, but permanently disruptive for Lyackson, who have identified a historical connection to, and continued or desired use of, sites or places that help define the cultural landscape in the Project area.

Additional mitigation to address this potential incremental effect that is not otherwise addressed in the Application is proposed in **Section 10.1.3.4** and summarized below under Mitigation.

Mitigation

This section provides a summary of mitigation measures identified to address potential Project-related effects on the exercise of Aboriginal Interests by Lyackson. For a more detailed discussion, refer to **Section 10.1.3.4 Mitigation**.

Mitigation measures identified for the relevant VCs and ICs in Part B of the Application were reviewed to assess their effectiveness at addressing potential Project-related effects on the exercise of Aboriginal Interests related to those VCs. Examples of mitigation that are proposed in the Application to address potential effects on VCs and ICs, with the potential to result in an effect on Aboriginal Interests, include:

- Avoiding fisheries sensitive timing windows during key Project activities.
- Developing a Marine Access Management Plan to ensure marine use activities, including those supporting Aboriginal Interests, can continue during Project construction.
- Scheduling activities with the potential to generate underwater noise to avoid potential effects on marine mammals.
- Development and implementation of a Terrestrial Vegetation and Wildlife Management Plan with measures to minimize disturbance and loss of vegetation, prevent soil compaction, and minimize clearing in order to minimize effects on vegetation.

These measures are expected to be largely effective at avoiding, reducing, or otherwise managing potential Project-related effects on the exercise of Aboriginal Interests during Project construction and operation.

Recognizing some measurable effects on Lyackson's Aboriginal Interests could remain following the application of mitigation to address potential effects on the relevant VCs and ICs in Part B, the following additional measures have been identified to address such effects:

- Ongoing consultation with Lyackson regarding proposed measures, management plans, and monitoring programs related to intermediate components and valued components assessments; and
- Development of a Cultural Heritage Management Plan.

Residual Effects

With the implementation of mitigation measures identified in **Section 10.1.3.4** and summarized above, residual adverse effects of the proposed Project on the exercise of Aboriginal Interests are expected to be negligible (i.e., not measurable or detectable), and are not further assessed.

Summary and Conclusion

Part C of the Application builds on consultation undertaken to date to understand Lyackson's Aboriginal Interests and provides for an assessment of potential Project-related effects of the Project on Aboriginal Interests.

The Ministry began consultations with Lyackson prior to the submission of the Project Description, which is the end of the Initial Consultation Phase. Both EAO and the Ministry consulted with Lyackson during the Pre-Application Phase, which concluded with the submission of the Application. The main concerns expressed by Lyackson during consultations include:

- Adequacy of Environmental Assessment (EA) methodology to address social and cultural effects;
- Proper context of village site is not considered nor is the village site as a trade centre accurately characterized;
- Lyackson's access to the Fraser River and the potential to displace fishing vessels;
- Cumulative effects;
- Capacity funding for Traditional Use Study and to facilitate participation in the Project review process;
- Protection of archaeological and heritage resources and opportunities for cultural recognition and naming;
- Aboriginal participation and Project-related opportunities;
- Effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon;
- Social effects of the Project on Lyackson's ability to transfer knowledge, language and participate in socio-cultural practices;
- Concerns related to dredging, potential for increased vessel traffic and larger vessels resulting from Tunnel decommissioning;
- Potential effects on flow rates, salt wedge and sedimentation after Tunnel removal;

- Potential effects of run off and drainage along the highway corridor, including heavy metal transport from traffic to water and land, management of runoff from the bridge;
- Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations;
- Potential for public safety concerns related to potential for creation of increased criminal activity and need for appropriate safety/suicide fencing;
- Potential effects of the bridge structure, lighting, and noise on terrestrial wildlife, marine mammals, waterfowl, and migratory birds;
- Inclusion of culturally significant plants in planting plans and opportunity for Lyackson in the identification of plants, and planting work. Need for management of invasive plant species;
- Concern with increased water temperatures in the Fraser River and the importance of opportunities to provide additional shade along the river; and
- Potential effect of removing the Tunnel on marshes along the river.

Based on information provided by Lyackson and other publicly-available sources, the Ministry developed a summary of past, present and desired future use of the proposed Project area and its surroundings for the purposes of fishing, hunting/trapping, gathering, archaeology and cultural heritage interests and other related interests. This summary indicates that Lyackson has, does and intends to continue to use the Fraser River for cultural purposes.

Relying first on the results of the effects assessments for related VCs and ICs in Part B, the assessment of potential effects of Lyackson's Aboriginal Interests considered four indicators:

1. Access to preferred locations for the exercise of Aboriginal Interests;
2. Availability of preferred resources for the exercise of Aboriginal Interests;
3. Quality of preferred resources for the exercise of Aboriginal Interests; and
4. Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests.

As reviewed in **Section 10.1.3.3** and **Section 10.1.3.4**, the mitigation measures, management plans, and monitoring programs identified in Part B of the Application for ICs or VCs linked to the exercise of Aboriginal Interests are expected to be largely effective at addressing the incremental Project-related effects noted above on the exercise of Aboriginal Interests by Lyackson First Nation, except in the following potentially measurable cases:

- Project construction:

- Potential temporary direct (minor) effect on quality of experience related to construction-related noise and a potential temporary indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance
- Project operation:
 - Potential permanent direct (minor) effect on quality of experience related to traffic noise and a potential indirect (minor) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance while engaged in those uses
 - Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses

The following additional measures have been identified to address the above-noted effects:

- Ongoing consultation with Lyackson regarding proposed measures, management plans, and monitoring programs related to IC and VC assessments; and
- Development of a Cultural Heritage Management Plan.

With the implementation of mitigation proposed to address potential effects on VCs and ICs, as well as additional mitigation proposed to address potential residual effects on Aboriginal Interests, no effects on the exercise of Aboriginal Interests by Lyackson, as a result of the Project, are expected.

| ENVIRONMENTAL ASSESSMENT PROCESS | | | |
|---|---|-----------------|--------------------------------------|
| <p>An environmental assessment of the Project is required under the B.C. <i>Environmental Assessment Act</i> (B.C. <i>EAA</i>), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. <i>EAA</i> sets out the criteria for reviewable projects.</p> <p>On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. <i>EAA</i>, and that it requires an EAC.</p> <p>The Project as proposed is not subject to review under the <i>Canadian Environmental Assessment Act, 2012</i>, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.</p> <p>EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the <i>Environmental Assessment Act</i>.</p> | | | |

| | has included Pre-Application capacity funding. | | |
| Lack of resources and funding for First Nations communities. “It is like 100 referrals in one spread out over a number of years.” | The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. | Addressed | Funding for Application Review Phase |
| Strength of Claim assessment and related depth of consultation. Proper context of Village site is not considered nor is the Village site as a trade centre accurately characterized. | Concerns related to the strength of claim assessment have been referred to EAO and MARR. | Referred to EAO and MARR | None |
| Lack of EAO requirement to assess incremental cumulative effects on the exercise of Aboriginal Interests separately of the cumulative effects assessment of VCs that are directly linked to the exercise of those Aboriginal Interests | Concerns relating to the lack of EAO requirement to assess incremental cumulative effects have been referred to EAO. | Referred to EAO | None |

| ABORIGINAL INTERESTS | | | |
|---|---|--------------------------|--|
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Lyackson First Nation’s access to the Fraser River and the potential to displace fishing vessels. Potential interference with Aboriginal fisheries during decommissioning of the Tunnel and the importance of working closely with communities to ensure negative effects are avoided. “It is clear that Lyackson First Nation values, particularly those related to subsistence fishing, are likely to be directly impacted by Project construction and operation.” | Lyackson’s access to the Fraser River and the potential to displace fishing vessels (access to river locations for traditional use as a result of changes to physical characteristics of these locations) is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined. A measurable direct effect on access to instream locations for traditional use and a negligible effect to upland locations for traditional use has been determined. | Addressed in Application | Ongoing consultation and implementation measures outlined in Section 5.2.4 |
| Lyackson First Nation’s use of lands, waters, and resources in the area of the mouth and south arm of the Fraser River within 5 km of the Project, including the ancestral village site of the ʔəqtinəs/Tl’uqtinus and camps, cabins, and other residences in the area of Steveston and Canoe Pass, are fundamental to past, present, and future Lyackson First Nation use and occupancy, and to the ongoing practice of Lyackson First Nation culture, identity, and rights. | Noted. | Noted. | Ongoing consultation |
| Protection of Lyackson First Nation’s rights to harvest within the Project area. | Lyackson’s rights to harvest within the Project area are addressed in Part C of the Application. With the implementation of mitigation measures outlined in Table 10.3-1 and Section 10.1.3.5, residual effects on the exercise of Aboriginal Interests by Lyackson as a result of the Project are not expected. | Addressed in Application | Implementation of measures outlined in Section 10.1.3.5 |
| Consideration of cumulative effects on aboriginal rights | The Ministry’s cumulative effects assessment looked at potential incremental environmental effects of construction and operation of the Project in | Addressed in Application | None |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------|-----------------------------|
| | <p>conjunction with other present and reasonably foreseeable projects that could interact with the potential effects of this Project. The process and methodology used to conduct the cumulative effects assessment, including the identification of potential cumulative effects, identification of additional mitigation measures, and evaluation of any (residual) cumulative effects is outlined in Part B of the Application. Other Projects that are considered in the assessment of Project-related cumulative effects are also listed.</p> | | |
| <p>Inappropriate toll burden to access Lyackson village site, especially considering the current BC Ferries toll burden.</p> | <p>Noted.</p> | <p>Noted</p> | <p>Ongoing consultation</p> |

| ABORIGINAL CONSULTATION | | | |
|--|--|---------------|---|
| <p>Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified. Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.</p> <p>In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs, related to the exercise of Aboriginal Interests.</p> <p>Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Capacity funding to facilitate participation in the Project review process | Lyackson received funding for the Pre-Application Phase. The Ministry will provide further funding for the Application Review Phase. | Addressed | Consultation regarding funding for the Application Review Phase |
| Funding for Traditional Use Study | The Ministry signed funding agreements with the members of the Lyackson which provided funding for a Traditional Use Study. | Addressed | None |

| ABORIGINAL PARTICIPATION AND PROJECT-RELATED OPPORTUNITIES | | | |
|---|---|---------------|---|
| <p>The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.</p> <p>Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.</p> <p>The Project’s Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.</p> <p>The objectives and requirements of the Aboriginal Consultation Plan are to:</p> <ul style="list-style-type: none"> • Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests • Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes • Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns • Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes • Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects • Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork. • Incorporate community and traditional knowledge in Project components <p>Document and report to EAO on the Ministry’s Aboriginal consultation program at times specified by EAO.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Revenue sharing opportunities from tolling | Revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways. A discussion on tolls is included in Sections 1.0 and 5.1 of the Application. | Addressed | None |
| Opportunities for cultural recognition and naming. Suggestion that a Canoe be commissioned which would have paddles for each Nation showing the relationship between the Ministry and the Nations. | The Ministry is exploring opportunities for cultural recognition and naming and will to work with Lyackson and other Aboriginal groups on this matter. Lyackson’s suggestion is noted. | Ongoing | Discussion with Aboriginal groups to explore opportunities related to cultural recognition and naming, art and interpretive signage |
| Project-related employment, training, contracting, and economic development | The Ministry is committed to working with Lyackson to identify potential opportunities to benefit from the | Ongoing | The Ministry will share information as it becomes |

| <p>Adequate training time to take full advantage of potential future Project work activities. Opportunities for training related to traditional activities.</p> | <p>The Ministry is committed to working with Lyackson First Nation to identify potential opportunities to benefit from the Project. The Ministry has initiated discussions with Lyackson First Nation regarding Project-related benefits and opportunities.</p> | <p>Ongoing</p> | <p>The Ministry will share information as it becomes available to support community preparedness and welcomes input from Aboriginal Groups on the type of information that would be useful.</p> |

| 4.1 RIVER HYDRAULICS | | | |
|---|--|-----------|---|
| <p>The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.</p> <p><u>Effects</u> A negligible effect to access to river locations for traditional use has been determined. A negligible effect on quality of experience tied to the traditional use of river locations has been determined.</p> <p><u>Mitigation</u> Monitor the riverbed within 100 metres upstream and downstream of the watermain. Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing. Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice</p> <p><u>Residual & Cumulative Effects</u> No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Change in flow rates after Tunnel removal | The proposed bridge will have a clear-span, which reduces potential effects to river hydraulics and river morphology within the Fraser River South Arm. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. River Hydraulics and River Morphology are addressed in Section 4.1. | Addressed | Implementation of mitigation measures outlined in Section 4.1.4 |
| Potential effect of removing the Tunnel on marshes along the river. "Marshes should be allowed to naturally occur as they are critical habitat for fish for | Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. Creating | Addressed | Implementation of mitigation measures outlined in Section 4.7.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|-----------|--|
| protection for predators, rest and clear water to breathe.” | comparable habitat within the Project alignment will offset unavoidable potential Project-related effect, which is limited to a small reduction in area of the cattail marsh that overlaps with Project components. Vegetation is addressed in Section 4.7 of the Application. | | |
| Post decommissioning monitoring of potential effects of Tunnel removal and importance of sharing this information with Aboriginal Groups in writing and through meetings. | Environmental monitoring will be conducted during construction of the Project and will have the key objective of ensuring construction activities are undertaken in accordance with the mitigation described within the Application and EAC, CEMP, and associated permits, licenses, and approvals. The CEMP will describe the frequency and scope of environmental monitoring and reporting that will be implemented throughout construction of the Project. Implementation of the environmental monitoring program will be overseen by a qualified environmental professional and will be carried out during all construction activities that have the potential to result in adverse environmental effects. The environmental monitor will assess the implementation of the CEMP and any permits or approvals assigned to the Project, as well the effectiveness of the mitigation applied. The environmental monitor will be authorized to suspend any activity resulting in or potentially resulting in a breach of the CEMP or associated environmental permits, licenses and approvals. The Ministry will share this information with Lyackson. | Addressed | Environmental monitoring and ongoing information sharing |

| 4.2 SEDIMENT AND WATER QUALITY | | | |
|---|---|-----------|---|
| <p>The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.</p> <p><u>Effects</u> A negligible effect on quality of water used for cultural purposes has been determined. A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.</p> <p><u>Mitigation</u> Avoid effects through Project design. Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment. Develop Construction Environmental Management and Operational Environmental Management plans. Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site. Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams. Monitor water quality during construction. Use timing windows for undertaking in-stream works.</p> <p><u>Residual & Cumulative Effects</u> No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Potential effects of run off and drainage | The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciative change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated. Elements of the Project design, including the use of bio-filtration ponds, will provide a benefit by improving the level of treatment of surface runoff from Highway 99. Applying mitigation, including timing windows for undertaking | Addressed | Implementation of mitigation measures outlined in Section 4.2.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|-----------|-------------------------|
| | in-stream works, will insure that Project-related effects on water quality are effectively mitigated. No Project-related residual or cumulative effects on sediment and water quality are expected. Sediment and Water Quality is addressed in Section 4.2 of the Application. | | |
| Impacts of the River from potential pollutants and contaminants on the Tunnel walls if left in place | The tunnel decommissioning is anticipated to involve the removal of the four in-river sections of the Tunnel. | Addressed | None |

| 4.4 FISH AND FISH HABITAT | | | |
|---|---|-----------|---|
| <p>The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.</p> <p><u>Effects</u> A negligible effect on the availability of fish resources for traditional use has been determined. A negligible effect on quality of fish resources for traditional use has been determined. A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.</p> <p><u>Mitigation</u> Avoid effects through Project design. Apply best management and environmental management practices. Develop Construction Environmental Management and Operational Environmental Management plans. Use timing windows for undertaking in-stream works. Erosion and sediment control. Habitat enhancement and offsetting.</p> <p><u>Residual & Cumulative Effects</u> There is a low, short-term probability of physical injury or mortality to fish through crushing or entrainment during the construction period. No significant Project-related residual or cumulative effects on fish and fish habitat are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, and salmon | The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon and salmon to the Lyackson. Potential Project-related effects on fish and fish habitat are presented in Section 4.4 of the Application. | Addressed | Implementation of mitigation measures outlined in 4.4.4 |
| Concern with increased water temperatures in the Fraser River and the importance of opportunities to provide additional shade along the river | The Project will not have any measureable effects on water temperatures within the Fraser River South Arm and there are limited opportunities to provide shade that could moderate water temperature within this wide mainstem channel. More specifically, the Project will extensively avoid any riparian clearing on the river and any shading provided by the new bridge will be | Addressed | Implementation of mitigation measures outlined in 4.4.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|---------------------------------|--|
| | <p>negligible. Determined by factors functioning at a watershed-level (e.g., climate and weather), water temperatures within the lower reaches of the river are primarily determined by upstream factors and not notably influenced by riparian shading. Riparian vegetation does, however, also provide a wide range of other fish habitat functions on large river channels like the Fraser River. These fish habitat functions include, but are not limited to shoreline habitat complexity, biofiltration functions, insect drop for food, and detrital inputs which support the broader food web. Although there are limited opportunities to directly affect water temperatures within the mainstem river, the Project’s proposed restoration of Green Slough is anticipated to provide enhanced habitat for fish, including riparian vegetation that will provided shaded habitat for fish.</p> | | |
| <p>Fish mortality from pile driving and blasting</p> | <p>The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. Mitigation, including timing windows for undertaking in-stream work and other measures outline in Project-related Environmental Management Plans, will ensure that potential effects on fish and fish habitat are effectively addressed. Fish mortality should not be a significant issue during pile driving.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.4.4</p> |
| <p>Effects of pile driving on salmon migration</p> | <p>Pile driving should not have an impact on salmon migration.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.3.4 and 4.4.4</p> |
| <p>Potential effects of underwater noise generated by Tunnel decommissioning and other construction activities on migrating salmon</p> | <p>Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in 4.3.4 and 4.4.4</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--------|---|--------|-------------------------|
| | scheduling such activities during periods of low tide, when work can be completed under shall water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application. | | |

| 4.6 MARINE MAMMALS | | | |
|---|---|--------------------------|---|
| <p>Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River.</p> <p>Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.</p> <p><u>Effects</u></p> <p>A negligible effect on the availability of marine mammal resources for traditional use has been determined.</p> <p>A negligible effect on quality of marine mammal resources for traditional use has been determined.</p> <p>A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.</p> <p><u>Mitigation</u></p> <p>Apply standard industry and best management practices to activities such as impact pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.</p> <p>Monitor underwater noise.</p> <p><u>Cumulative Effects</u></p> <p>No significant Project-related residual or cumulative effects on marine mammals are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Impact on marine mammals such as the Stellar Sea Lion | Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 kms. Standard industry and best management practices will be applied to activities such as impact pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to. Marine Mammals are addressed in Section 4.6 of the | Addressed in Application | Implementation of mitigation measures outlined in Section 4.6.4 |

George Massey Tunnel Replacement Project

ABORIGINAL CONSULTATION – Appendix H2 Lyackson First Nation Overview Table

|--------|---------------------------|--------|-------------------------|
| | Application. | | |

| 4.7 VEGETATION | | | |
|---|---|--------------------------|---|
| <p>The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development. Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, moved verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.</p> <p><u>Effects</u> A negligible effect on the availability of vegetation resources for traditional use has been determined. A negligible effect on quality of vegetation resources for traditional use has been determined. A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.</p> <p><u>Mitigation</u> Minimize potential effects through Project design. Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction. Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail march that overlaps with Project components. Replant disturbed areas with native species. Invasive species management.</p> <p><u>Cumulative Effects</u> No significant Project-related residual or cumulative effects on vegetation are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Invasive plant species and proposed plans to manage presence during construction | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 |
| Inclusion of culturally significant plants in planting plans and opportunity for Lyackson in the identification of plants, and planting work. Lyackson has the capacity to undertake this type of work. | Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in planting plans will be considered at that time. The Ministry will consult Aboriginal Groups on the development of these plans. | Addressed | Develop planting plans with consultation from Aboriginal Groups |
| Ministry's hydro-seeding spray contains invasive grasses that will damage new plants and add to the problem of invasive | The Ministry will review its hydroseed mixes. | Addressed | Review hydro-seed mixes |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---------|---------------------------|--------|-------------------------|
| plants. | | | |

| 4.8 TERRESTRIAL WILDLIFE | | | |
|---|---|--------------------------|---|
| <p>The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.</p> <p><u>Effects</u> A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined. A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined. A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.</p> <p><u>Mitigation</u> Minimize potential effects through Project design. Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions. Habitat enhancement and offsetting.</p> <p><u>Residual & Cumulative Effects</u> There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows. There is a low, long-term probability of barn owl mortality. No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Potential light and noise effects on wildlife and fish. | The Ministry understands that Lyackson is concerned with the potential effects of light and noise on species such as waterfowl, owls, bats and migratory birds. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. Project-related effects on wildlife and wildlife habitat. Potential Project-related effects on terrestrial wildlife are presented in Section 4.8 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.8.4 |
| Potential effects of the bridge structure on species such as waterfowl and migratory birds. | The Ministry understands that Lyackson is concerned with the potential effects of the new bridge structure on species such as waterfowl and migratory birds. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.8.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|--------------------------|---|
| | Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. Terrestrial Wildlife in addressed in Section 4.8 of the Application. | | |
| Destruction of wildlife habitat, especially for bald eagles and blue herons, due to disturbance of green space on Deas Island and other riparian areas in the Project footprint during construction and operation of the Project. | Environmental protection measures that will be implemented during Project construction and operation to prevent of minimize potential effects on vegetation, and thereby potential effects on wildlife habitat, will be outlines in a Construction Environmental Management Plan as described in Section 12.0.The Plan will include a Terrestrial Vegetation and Wildlife Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 |
| Decreased quantity of birds, especially migratory waterfowl and eagles, in the Project area due to BC Hydro power lines and other above-ground structures. | As discussed in Section 4.7 (Terrestrial Wildlife), a collision risk study was conducted to understand seasonal use and behaviours by birds, and to estimate collision risk at the new bridge crossing location. The findings of the study indicate that collision effects to birds are considered unlikely and that most birds avoid collisions by flying above or below structures | Addressed in Application | None |
| Potential for impacts to wildlife , including nesting birds, due to increased air contamination from idling vehicles and the running of BC Hydro power lines above ground (as opposed to their current location within the George Massey Tunnel). | As discussed in Section 4.9 (Air Quality), ambient air quality in the vicinity of the Highway 99 corridor is expected to improve in the future, with or without the Project. | Addressed in Application | None |

| 4.9 AIR QUALITY | | | |
|---|---|-----------|-------------------------|
| <p>Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project. The new bridge will also allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as at the Tunnel portals, where they accumulate today. Greenhouse gas emissions from traffic along the Highway 99 corridor are expected to decrease, with or without the Project, as newer engine technologies provide substantial reductions in overall CO₂e emission levels. Project-related reduction in idling due to congestion is anticipated to result in a further 5% to 6% reduction in GHG emissions.</p> <p><u>Effects</u> No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.</p> <p><u>Mitigation</u> Minimize effects through Project design. Implement recognized mitigation measures and best management practices that have proven to be effective on other transportation projects. Measure and monitor vehicle emissions and road dust during Project operation.</p> <p><u>Residual & Cumulative Effects</u> No significant Project-related residual or cumulative effects on air quality are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Congestion and air quality issues – support for improved transit and anything that reduces idling. | Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. |--|---|------------------|-------------------------|
| | <p>on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | | |
| <p>Increased air contamination from idling vehicles, perceivable from the Fraser River banks, resulting in disturbance of LFN use and potential adverse effects on human and animal health</p> | <p>Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in. Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. The new bridge will allow for better dispersion of vehicle emissions and avoid accumulation of emission-related air contaminants at specific locations such as the Tunnel portals, where they accumulate today. Effects on air quality during Project construction will be minimized through implementation of recognized mitigation measures and best management practices that have proven to be effective on other transportation projects.</p> | <p>Addressed</p> | <p>None</p> |

| 4.10 ATMOSPHERIC NOISE | | | |
|--|---|--------------------------|--|
| <p>The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment are expected to be lower than current noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the highway but do not exceed what is acceptable for residential, educational or institutional facilities.</p> <p><u>Effects</u> No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined. No or negligible effect on quality of experience while engaged in or tied to traditional use as a result in ground-borne vibration has been determined.</p> <p><u>Mitigation</u> Minimize effects through Project design. Adhere to construction best practices and the Ministry’s 2014 <i>Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways</i>. Develop and implement a Noise Management Plan.</p> <p><u>Residual & Cumulative Effects</u> With the application of mitigation, no significant Project-related residual or cumulative effects on air quality are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Potential impacts of noise from pile driving and blasting | The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Mitigation in accordance with the Ministry’s 2014 <i>Policy for Assessing and Mitigating Noise Impacts from New and Upgraded Numbered Highways</i> will be implemented, as warranted, at select locations to avoid or minimize potential Project-related increase in post-construction noise levels. Atmospheric Noise is addressed in Section 4.10 of the Application. | Addressed in Application | Implementation of mitigation measures outlined in 4.10.4 |
| Increase in traffic, and consequent increase in associated noise and vibration due to the increases capacity of the new bridge | The Project is located in an area where ambient noise levels are generally high, dominated by noise from traffic on Highway 99 and connecting roadways. Once the new Bridge and upgraded highway become operational, ambient noise levels at the majority of residential receptors along the Project alignment, after mitigation, are expected to be lower than current | Addressed in Application | Implementation of mitigation measures outlined in 4.10.4 |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|--------|---|--------|-------------------------|
| | noise levels. Noise levels at parks adjacent to the Project, including Deas Island Regional Park, will increase by varying degrees dependent on the distance from the Highway but do not exceed what is acceptable for residential, educational or institutional facilities. Atmospheric Noise is addressed in Section 4.10 of the Application. | | |

| 5.2 MARINE USE | | | |
|--|---|---------------------------------|---|
| <p>The Fraser River South Arm supports a variety of marine uses, including deep sea and domestic shipping, materials handling, log storage, and sorting and booming, as well as commercial, recreational and Aboriginal fishing activities. In addition, recreational boating, supported by marinas and a rowing club located in Deas Slough, take place within the vicinity of the Project.</p> <p>A clear span crossing of the Fraser River is proposed to avoid impacts to marine use and the existing three span Deas Slough Bridge will be replaced with a clear span to improve navigation in and out of the slough.</p> <p>Project-related effects on marine use may include temporary constraints on access and use of sections of the Fraser River South Arm and Deas Slough during construction.</p> <p><u>Effects</u></p> <p>A negligible effect on access to instream locations for traditional use has been determined.</p> <p>A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.</p> <p><u>Mitigation</u></p> <p>Minimize effects through Project design.</p> <p>Develop and implement a Marine Access Management Plan to ensure that important marine use activities can be reconciled with temporary constraints associated with Project construction.</p> <p>Establish communications protocols to advise in-stream construction activities.</p> <p>Ensure appropriate lighting and marking for safe navigation.</p> <p>Establish navigation protection zones during construction to avoid or minimize impact on marine use.</p> <p><u>Residual & Cumulative Effects</u></p> <p>No significant Project-related residual or cumulative effects on marine access are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| <p>Potential effects of construction during fishing season on fishing activities. Effects of construction and decommissioning-related barging activities on Lyackson fishing.</p> | <p>Potential interference with Lyackson fisheries during bridge construction is addressed in Part C of the Application (in Section 10.1.3.2 and 10.1.3.8.7). A negligible effect to access to river locations for traditional use as a result of changes to the physical characteristics of these locations has been determined.</p> <p>The Ministry understands the importance of working closely with Aboriginal Groups to ensure negative effects are avoided.</p> | <p>Addressed in Application</p> | <p>Ongoing consultation and implementation of mitigation measures outlined in Section 5.2.4</p> |

| 5.3 LAND USE | | | |
|--|---------------------------|--------|-------------------------|
| <p>The majority of the Project alignment is located on provincial Crown land, including submerged land on the Fraser River bed, within the existing Highway 99 right-of-way. Land uses in areas adjacent to the highway include agriculture, industrial, institutional, mixed commercial and residential, parkland, and the Vancouver Landfill in Delta.</p> <p>The Project is consistent with local and regional land use plans, and will support long-term economic growth and encourage denser, land-intensive, high-quality forms of development consistent with such plans. The Project is not anticipated to affect regional growth trends or current trends for industrial land use and development. The Project aligns with adjacent land uses that have evolved along the highway 99 corridor.</p> <p>Once the new bridge becomes operational, recreational experience in its vicinity is expected to change due to improvements in local air quality, shoreline restoration of Deas Island, and re-vegetation of areas currently supporting highway infrastructure; improved connectivity across the Deas Island Regional Park resulting from removal of the Tunnel portals; and shading adjacent to the bridge, overhead noise, and changes in local viewscales.</p> <p>The Project will not result in changes to existing land use beyond small amounts of land, outside of the existing right-of-way, that area required for the Project.</p> <p><u>Effects</u></p> <p>A negligible effect on access to upland locations for traditional use has been determined.</p> <p>A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.</p> <p><u>Mitigation</u></p> <p>Minimize effects through Project design.</p> <p>Address temporary effects on existing land use during construction and incorporate land use considerations into a Traffic Management Plan.</p> <p>Incorporate land use considerations into a Marine Access Management Plan.</p> <p>Reconnect recreational trails.</p> <p><u>Residual & Cumulative Effects</u></p> <p>There is a high, short-term probability of disturbance to residential, commercial and industrial land uses.</p> <p>There is a high, short-term probability of disturbance to recreational uses near the new bridge.</p> <p>No significant Project-related residual or cumulative effects on marine access are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Lyackson has not voiced any specific issues or concerns with respect to Land Use. | | | |

| 5.5 VISUAL QUALITY | | | |
|---|--|-----------|-------------------------|
| <p>The new bridge will add noticeable visual features to the landscape and will change visual conditions adjacent to the Project alignment. Replacement of interchanges also has the potential to change visual conditions of these locations. At distances greater than one kilometer, the bridge deck will merge with the natural landscape and the main visual features will be the bridge towers. Changes in visual quality at interchanges will be minor as visual quality in such areas is currently influenced by existing transportation infrastructure.</p> <p><u>Effects</u> During construction, no to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape. During operation, a measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.</p> <p><u>Mitigation</u> Minimize effects through Project design. Use of vegetated buffers to minimize visual effects to residential developments within close proximity to the bridge in Delta.</p> <p><u>Residual & Cumulative Effects</u> There is a moderate, long-term probability of disturbance to visual quality. No significant Project-related residual or cumulative effects on marine access are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Running of BC Hydro power lines above ground (as opposed to their current location within the George Massey Tunnel). | If the BC Hydro’s transmission line is built above ground, it is expected that it will visually blend with the bridge structure. | Addressed | None |

| 6.1 HERITAGE RESOURCES | | | |
|---|---|---------------------------------|--|
| <p>The Project is located in an area where substantial historical development has occurred and the majority of the Project alignment is characterized as having low archaeological potential. No archaeological or historical sites were found within the Project alignment during the field inventory of the Project area.</p> <p><u>Effects</u></p> <p>A negligible effect on access to upland locations for traditional use has been determined.</p> <p>A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.</p> <p>During construction, no to negligible effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.</p> <p>During operation, a measurable effect on quality of experience while engaged in or tied to traditional use as a result of changes to the cultural landscape.</p> <p><u>Mitigation</u></p> <p>Develop and implement a Heritage Resources Management Plan, which will include a change find procedure, to avoid impacts to previously unknown heritage resources that may be encountered during Project construction and operation.</p> <p>Undertake additional archaeological surveys.</p> <p><u>Residual & Cumulative Effects</u></p> <p>No significant Project-related residual or cumulative effects on heritage resources are expected.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| <p>Protection of archaeological and heritage resources, including intangible heritage sites.</p> <p>Protection of cultural and archaeological sites that are known to exist or may be discovered within the Project area. No more tolerance for further disturbance of archaeological sites in the overdeveloped Lower Mainland. This includes disturbed and intact sites.</p> | <p>Ministry acknowledges that protection of archaeological sites as well as intangible heritage sites are of utmost importance to Lyackson.</p> <p>All Aboriginal Groups have been provided with a comprehensive list of these sites, the Archaeological Overview Assessment, the Archaeological Impact, and Heritage Resources Overview Assessment. Appropriate measures will be taken to ensure the protection of archaeological and heritage resources as outlined in Section 6.1.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures as outlined in Section 6.1.4</p> |
| <p>Participation in archaeological fieldwork and review of archaeological draft reports. Importance of having a cultural person, known to LCFN and LFN, participate in archaeological work.</p> | <p>Lyackson participated in all archaeological field work to date and was provided the opportunity to review draft archaeological reports.</p> | <p>Addressed in Application</p> | <p>Lyackson will be invited to participate in any additional archaeological fieldwork required for the Project and will have an opportunity to review related reports.</p> |
| <p>Assessment of cultural significance of the</p> | <p>The cultural significance of Deas Island is noted. The</p> | <p>Noted</p> | <p>Ongoing consultation</p> |

| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
|---|--|--------|-------------------------|
| site, if a run off pool is being created for the Project on Deas Island | use of biofiltration ponds will provide a benefit by improving the level of treatment of surface runoff from highway 99. | | |

7.0 HUMAN HEALTH

Predicted Project-related improvements in local and regional air quality, primarily due to reductions in congestion-related idling, are anticipated to have a positive effect on human health. The Project is anticipated to improve health equity by providing disadvantaged groups with better access to reliable transportation options. The Project will result in additional health benefits related to greenhouse gas emissions reductions, increased active and public transportation, improved traffic safety, improved connectivity and access, improved emergency response, and economic development opportunities. Future Project-related consultation with Aboriginal groups represents an important opportunity to address health interests specific to Aboriginal communities that have been identified in the health impact assessment.

Planned future engagement with a broad range of stakeholders will help to optimize Project benefits associated with improvements to active transportation options such as cycling, addressing safety and security considerations, and emergency response.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

A negligible effect on the availability of marine mammal resources for traditional use has been determined.

A negligible effect on quality of marine mammal resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in air quality has been determined.

No, negligible or measureable effect on quality of experience with engaged in or tied to traditional use as a result in noise has been determined.

No or negligible effect on quality of experience with engaged in or tied to traditional use as a result in ground-borne vibration has been determined.

A negligible effect on access to instream locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of instream locations for traditional has been determined.

A negligible effect on access to upland locations for traditional use has been determined.

A negligible effect on quality of experience tied to access of upland locations for traditional has been determined.

Mitigation

Implement proven mitigation measures, effectively used during construction of projects such as the South Fraser Perimeter Road and Port Mann / Highway 1 Improvement, to ensure that temporary increases in ambient noise levels and air emissions during construction do not result in health effects. Implementation of mitigation measures outlined in Fish and Fish Habitat, Marine Mammals, Vegetation, Terrestrial Wildlife, Air Quality, Atmospheric Noise, Marine Use and Land Use.

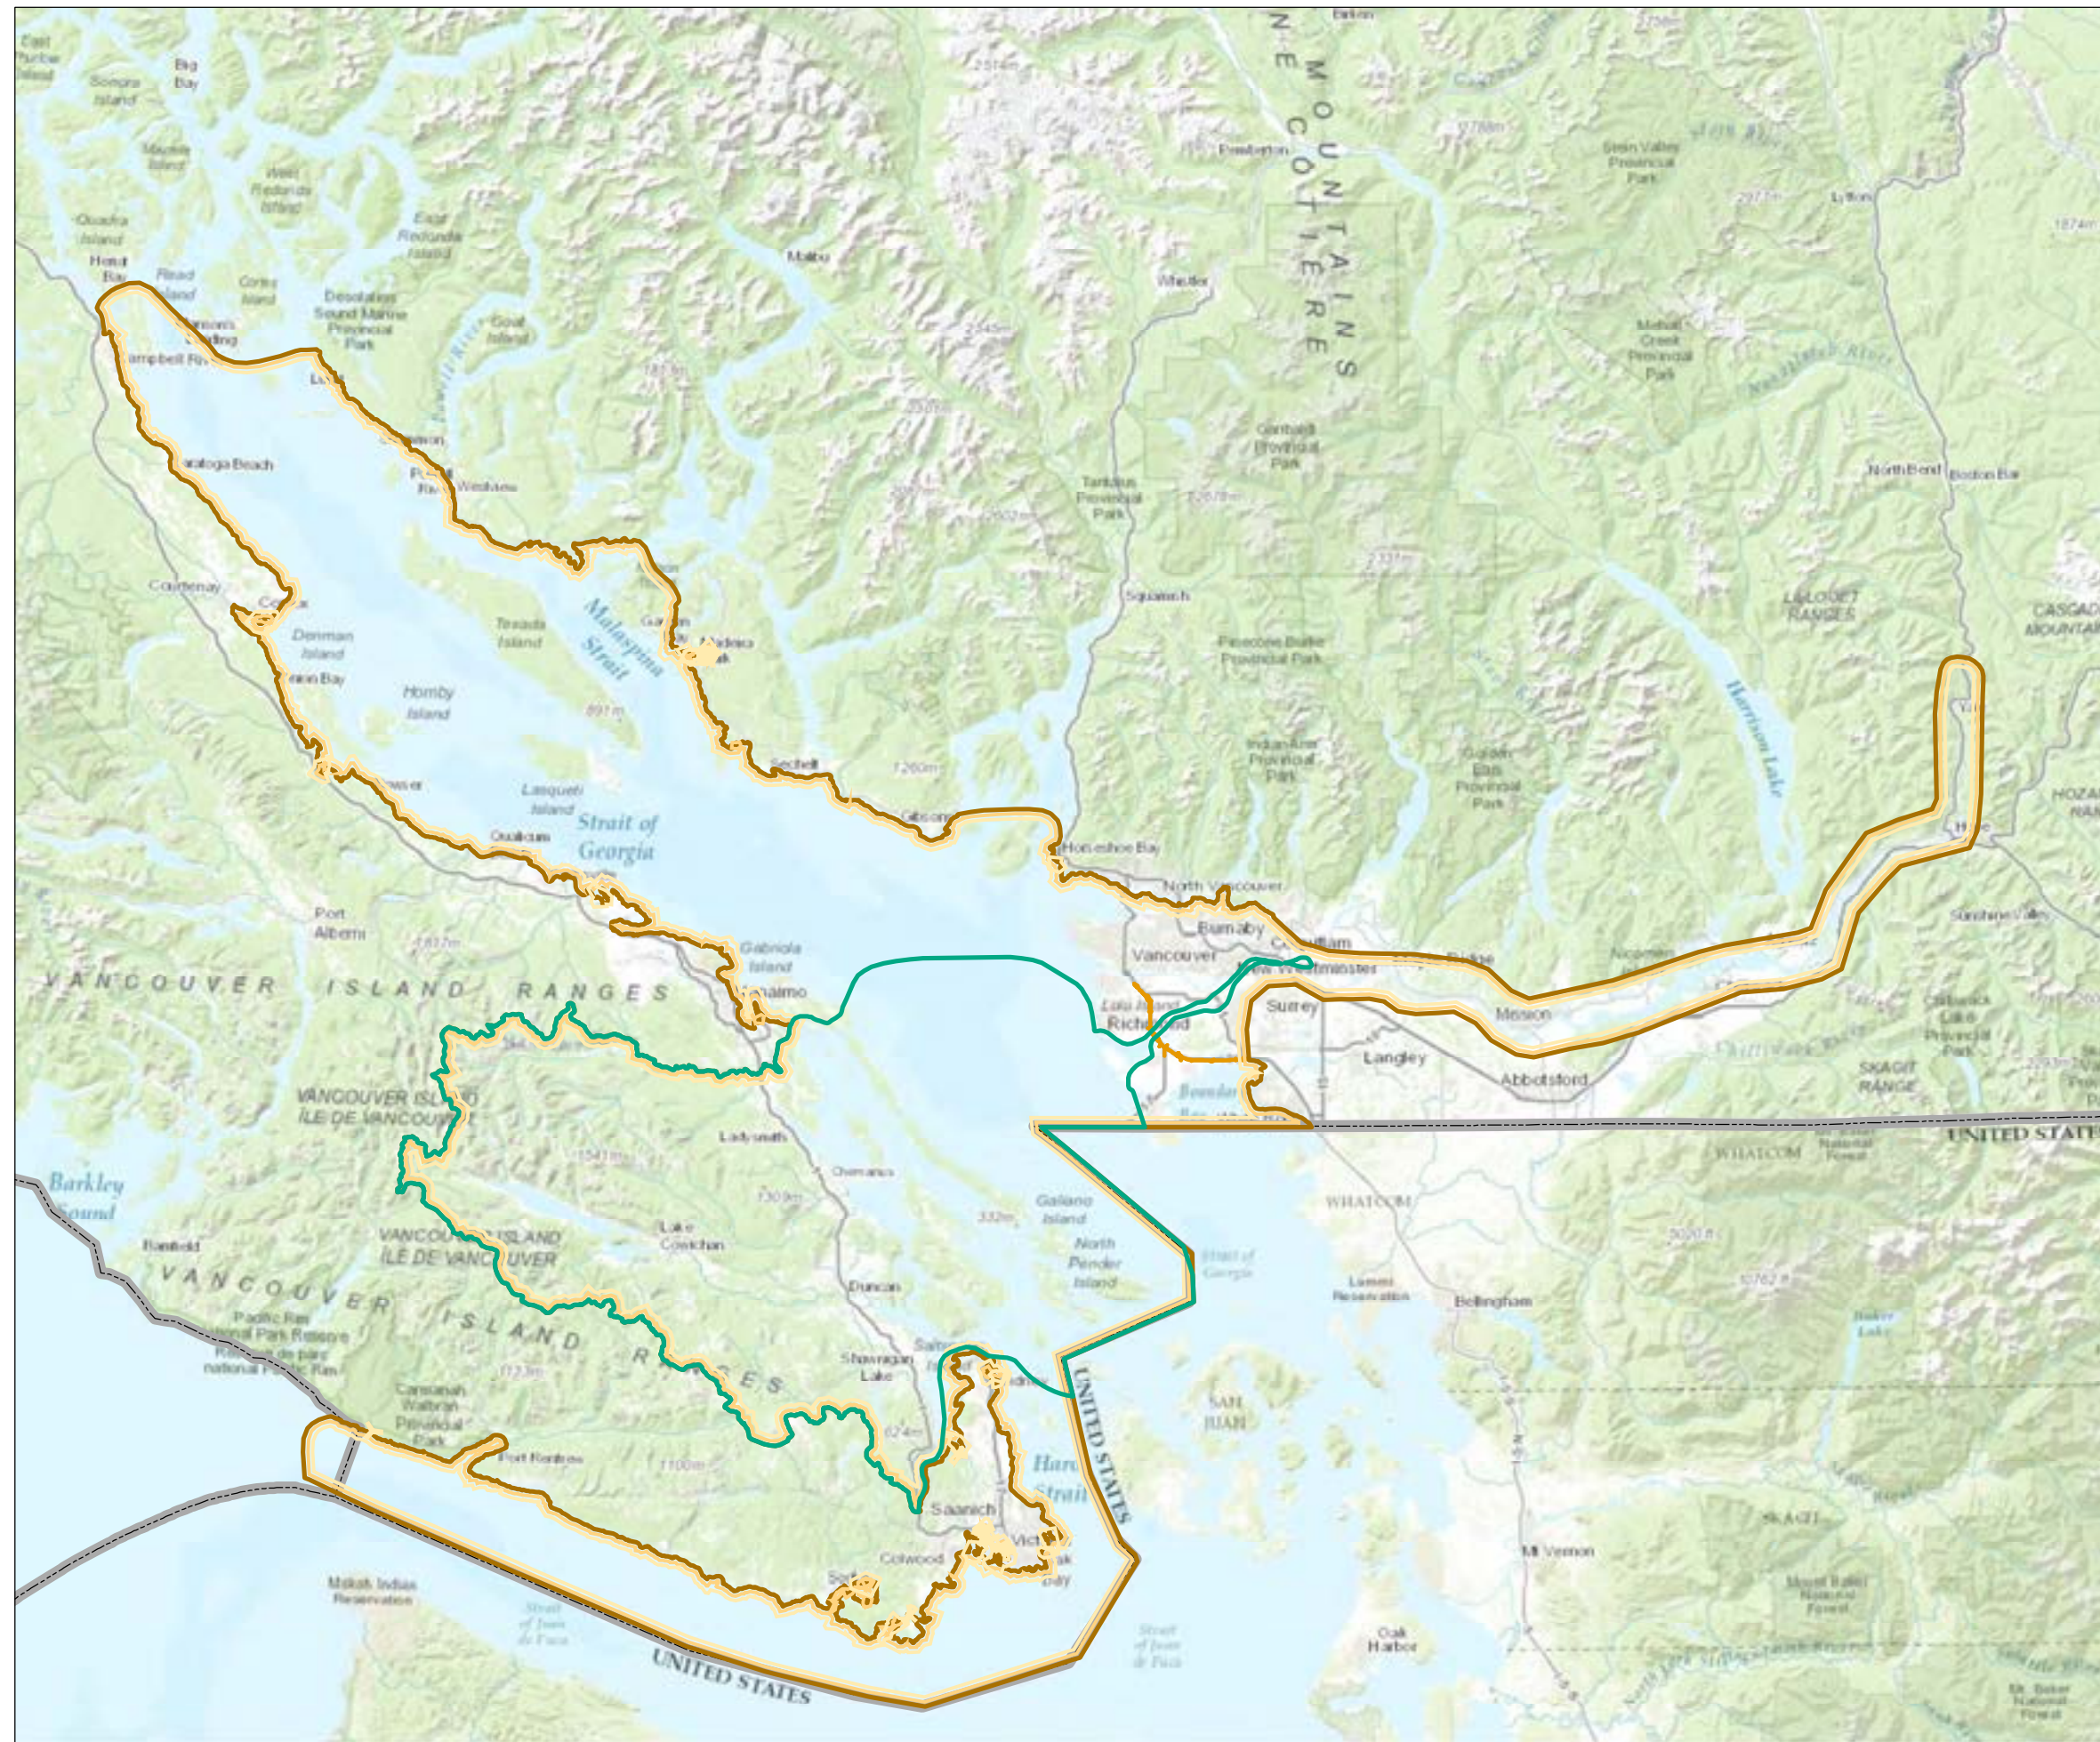

Residual & Cumulative Effects

| 7.0 HUMAN HEALTH | | | |
|--|---|--------------------------|---|
| No significant Project-related residual or cumulative effects on human health are expected. | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| New bridge will result in increased suicide attempts | The Ministry is in the process of developing a policy in which new bridges in the Lower Mainland will require the installation of safety barriers. The Ministry is committed to including safety barriers as part of the design of the new bridge and will continue to discuss additional measures with Lyackson. Assessment of potential Project-related effects on human health, including community and social factors, are presented in Section 7.1 of the Application. | Addressed in Application | Development of safety barrier policy for new bridges in the Lower Mainland. Implementation of mitigation measures outlined in Section 7.1 |
| The potential spread of social problems, including drug and sex trafficking, to more areas in the Lower Mainland due to economic change. Bottleneck at current Tunnel hampers illegal drug traffic - new Bridge will facilitate drug flow. New bridge will create proliferation of prostitution and drugs. Areas under Bridge will attract homeless population. Value added parks will not offset social impacts. | While not assessed as a Value Component in the Application, the potential for “at-risk populations” to use/congregate in areas near the bridge will be considered in Section 7.1 of the Application. | Addressed | None |

| 8.0 ACCIDENTS AND MALFUNCTIONS | | | |
|--|--|--------------------------|--|
| <p>Adherence to the practices and procedures contained in the Construction Environmental Management Plan will minimize the potential for accidents and malfunctions to occur.</p> <p>In general, replacement of the Tunnel with a new crossing and the proposed highway improvements are expected to lower the risk of accidents and malfunctions during highway operations and maintenance.</p> | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Spills of hydrocarbons from refueling or leaks in construction equipment/vessels, including human waste. Spills from accidents during construction and operations | An Emergency Response and Spill Contingency Plan will outline how construction personnel will prevent, prepare for, respond to, and clean up spills | Addressed in Application | Implementation of mitigation measures outlined in Section 12.1.5 (Emergency Response and Spill Contingency Plan) |
| Section appears to focus exclusively on the construction phase. Lyackson’s concerns are with the full life cycle - construction, operations, and deconstruction. | Section 8.0 (Accidents and Malfunction) addresses all aspects of the Project including construction, Tunnel decommissioning and operations. During construction and decommissioning, construction personnel will act in accordance with the Emergency Response and Spill Contingency Plan. During operations, accidents and other types of emergencies will be managed in accordance with the Ministry’s Highway Maintenance Specifications for Emergency Maintenance and related standards. | Addressed in Application | Adherence to appropriate plans, specifications and standards. |

| OTHER ISSUES | | | |
|---|---|---------------|--------------------------------|
| Consultation with Lyackson identified issues outside of the environmental assessment process, Aboriginal Interests, Aboriginal Consultation, Aboriginal Participation and Project-Related Opportunities, and sections of the Application. | | | |
| Issues | Proponent Response/Action | Status | Next Steps by Proponent |
| Congestion at Richmond-Vancouver border | Traffic analysis shows that approximately 60 per cent of northbound morning Tunnel traffic is destined to Richmond, and that traffic volumes at the Oak Street and Knight Street bridges have been declining since 2010. While Oak Street is likely to remain congested due to signal lights at Oak Street and 70th Avenue in Vancouver, the Project is not expected to result in more traffic driving over Oak Street Bridge each day. The new replacement bridge and the Highway 99 improvements will increase the convenience of accessing transit and provide an efficient route to the Canada Line stations in Richmond for commuters continuing to Vancouver. Traffic is addressed in Section 5.1 of the Application. | Addressed | None |
| Use and disposal of dredged and other, material in the river as well as general concerns related to dredging of the Fraser River. | Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application. | Addressed | None |

APPENDIX I

Musqueam Indian Band

1.0 Introduction

This appendix provides a summary of the information presented in Part C Aboriginal Consultation (Part C) of the Application for an Environmental Assessment Certificate (the Application) regarding the assessment of effects on Aboriginal Interests. Aboriginal Interests are defined as asserted or determined Aboriginal rights, including title, or treaty rights. This appendix presents the information specific to Musqueam Indian Band (Musqueam).

The organization of the information presented generally follows Part C and includes the following sections:

- Consultation;
- Community Profile;
- Existing Conditions;
- Potential Effects;
- Mitigation;
- Residual Effects; and
- Summary and Conclusion.

For more detailed information on the effects assessment on Aboriginal Interests related to Musqueam, refer to the following sections of Part C:

- Consultation with Musqueam (**Section 10.1.2.10**);
- Musqueam community profile (**Section 10.1.1.7**);
- Description of existing Musqueam Aboriginal Interests (**Section 10.1.3.2**);
- Assessment of potential effects of the Project on the exercise of Musqueam Aboriginal Interests (**Section 10.1.3.3**);
- Mitigation relating to potential effects on Aboriginal Interests (**Section 10.1.3.4**); and
- Residual effects on Musqueam Aboriginal Interests following application of mitigation (**Section 10.1.3.5**).

A summary of the Aboriginal Interests Assessment for Musqueam is also provided in **Section 10.1.3.8**.

The summary presented in this appendix also incorporated information found in the Musqueam Overview Table (**Appendix I2**), which provides detailed information regarding:

- Musqueam’s issues and concerns identified to date;
- Identification of potential effects on VCs and ICs that relate to the assessment of effects on Musqueam’s Aboriginal Interests;
- The Ministry’s response to specific issues and concerns raised by Musqueam;
- The status of these issues and concerns; and
- Next steps required to address outstanding issues and concerns.

2.0 Consultation

This section provides information regarding the consultation activities that the EAO and Ministry carried out prior to submission of the Application.

2.1 EAO-led Consultation Activities

2.1.1 Capacity Funding

When a provincial agency is a proponent of a project going through a provincial EA under the British Columbia *Environmental Assessment Act* (BCEAA), that agency provides funding to Aboriginal Groups to support their involvement in pre-Application and Application review phases in place of EAO providing such funding. The Ministry’s provision of capacity funding is discussed in the following section, Proponent-led Consultation Activities.

2.1.2 Participation in Working Group

EAO invited Musqueam and all other Aboriginal groups identified in Schedule B of the Section 11 Order to participate as members of a Working Group.

During the Pre-Application stage, Musqueam attended two EAO-led Working Group meetings where the Ministry presented information on the Project and the environmental assessment process and received and responded to comments on those presentations.

The first Working Group meeting, held January 2016, focused on the environmental assessment process, Project overview and update, Key Areas of Study, draft Application Information Requirements overview, and preliminary conclusions from study results.

The second Working Group meeting, held March 2016, focused on the environmental assessment process, list of materials available on the Project website, review of comments received on, and resulting changes to, the draft Application Information Requirements, and a

description and rationale of the assessment areas. Working Group comments raised by Musqueam in relation to the draft Application Information Requirements resulted in Aboriginal groups being invited to participate in river-otter related fieldwork in April 2016. The objectives of this work were to document river otter presence or potential presence within the Regional Assessment Area, document and describe use of riparian and high use areas and identify potential Project-related effects.

Musqueam also participated in the completeness review of the Application for an Environmental Assessment Certificate (Application) that considered whether the Application included information requirements set out in the Application Information Requirements.

It is assumed that Musqueam will continue as an active member of the Working Group through the environmental assessment process.

2.2 Proponent-led Consultation Activities

The Ministry began consultation with Musqueam in early 2013 in order to identify the nature and scope of Musqueam's Aboriginal Interests and how they might be impacted by the Project. Following is a summary of consultation activities led by the Ministry with Musqueam. A more detailed discussion is provided under the Musqueam section in **Section 10.1.2.10 Overview of Consultation with each Schedule B Aboriginal Group**. The following sections represent the main activities undertaken in support of Proponent-led consultation and include the following:

- Provision of capacity funding;
- Traditional use, traditional knowledge and other studies;
- Examples of Consultation Activities; and
- Concerns Identified to Date.

2.2.1 Capacity Funding

The Ministry entered into a Participation Funding Agreement, including the Initial Consultation and Pre-Application phases for consultation, with Musqueam. The Ministry has been working with Musqueam regarding their needs for capacity funding to facilitate their participation in the Application Review Phase. It is anticipated this will be summarized in a joint Memorandum of Understanding between the Musqueam and Ministry. Consultation activities that are anticipated to be undertaken during the Application Review Phase that will be supported by capacity funding include participation in technical reviews and analyses, involvement in ongoing consultation activities, and presentation of key information regarding their respective Aboriginal Interests.

2.2.2 Traditional Use, Traditional Knowledge & Other Studies

The Ministry provided additional funding to Musqueam for the preparation and submission of the traditional use study *Salmon So Thick, That You Could Walk on Water: Preliminary Scope of Musqueam Components for the Environmental Impact Assessment of the Proposed George Massey Tunnel Replacement Project*. The purpose of such studies is to identify Aboriginal input and traditional knowledge for inclusion and consideration in the EA. In addition, studies were funded to enhance the Ministry's understanding of Aboriginal Interests and Aboriginal Group's past, present and desired future use as it pertains to the exercise of Aboriginal Interests within the Project area and the potential adverse effects on identified Aboriginal Interests.

2.2.3 Examples of Consultation Activities

A number of consultation activities were undertaken with Musqueam during both the Initial Consultation Phase and the Pre-Application Consultation Phase as follows:

Initial Consultation Phase Activities - The Ministry recognized the importance and value of early engagement with Schedule B Aboriginal Groups and undertook an Initial Consultation Phase prior to the Pre-Application Phase. The Initial Consultation Phase concluded in December 16, 2015 with submission of Project Description. The focus of the Initial Consultation Phase was collection of baseline information and sharing of draft EA-related documents (i.e. Project Description and Key Areas of Study, draft Application Information Requirements (AIR)). The main consultation activities the Ministry undertook with Musqueam included:

- Sharing of Project-related information including focused presentation on topics on interest and/or concern to Musqueam;
- Funding for Musqueam's participation in Project consultation activities and EA process;
- Musqueam participation in field studies;
- Site visit;
- Review of draft EA documents such as the Project Description and Key Areas of Study, Heritage Resources Overview Assessment/Archaeological Overview Assessment, Heritage Resources Assessment, draft AIR and Aboriginal Consultation Plan;
- Meetings with Musqueam leadership, staff, consultants, elders and membership; and
- Response and follow up with Musqueam regarding the identification and resolution of issues.

Pre-Application Consultation Phase Activities - The Pre-Application Consultation Phase began with the filing of the Project Description and Key Areas of Study on December 16, 2015 and concluded with the submission of the Application. This phase included the issuance of Section 11 Order, AIR development and collection of baseline information. The main consultation activities the Ministry undertook with Musqueam included:

- Sharing of Project-related information including focused presentation on topics on interest and/or concern to Musqueam;
- Funding for Musqueam's participation in Project consultation activities and EA process;
- Meetings with Musqueam leadership, staff, consultants, elders and membership;
- Musqueam participation in fieldwork;
- Musqueam participation in the EA Working Group;
- Review of draft EA documents such as the Application Information Requirements, Aboriginal Consultation Plan, and Aboriginal Consultation Reports;
- Review of draft Part C content for the Application; and
- Response and follow up with Musqueam regarding the identification and resolution of issues.

2.2.4 Concerns Identified to Date

As outlined above, Musqueam’s concerns, identified through consultation undertaken to-date, are presented in **Appendix I2 Musqueam Indian Band Overview Table**. The Ministry’s response to Musqueam’s key concerns regarding potential impacts on Musqueam’s Aboriginal Interests are outlined below:

Table 1 Concerns identified to date

| Concerns Identified to Date | Response |
|--|---|
| Musqueam’s rights to harvest under the Sparrow decision | The Ministry acknowledges the Sparrow decision of May 1990 and Musqueam’s right to fish for food, social and ceremonial purposes in the area of Canoe Pass on the South Arm of the Fraser River, As outlined in Sections 4.4. (Fish and Fish Habitat), 4.6 (Marine Mammals), 4.7 (Vegetation), and 4.8 (Terrestrial Wildlife) of the Application, the Ministry is committed to avoiding or mitigating any potential effects on fish and fish habitat. This will be achieved through the application of best practices and environmental management practices. |
| Aboriginal participation and Project-related opportunities <ul style="list-style-type: none"> • Potential employment, training, contracting and economic development opportunities • Community preparedness • Cultural recognition and training • Revenue sharing opportunities from tolling | The Ministry is committed to working with Musqueam to identify potential employment, training, contracting and economic development opportunities and to identify ways to support community preparedness. The Ministry is exploring opportunities for cultural recognition and naming and will work with Musqueam on these opportunities. The provincial tolling strategy stipulates that revenue from tolling may only be used to defray the costs of designing, constructing, operating and maintaining highways. |

| Concerns Identified to Date | Response |
|---|--|
| <p>Effects to fish and fish habitat</p> <ul style="list-style-type: none"> • Importance of fish and fish habitat including species of cultural and economic importance such as eulachon, sturgeon and salmon • Importance of sloughs, tributaries and riparian work for fish stocks • Potential effects of pile driving, blasting and underwater noise generated by Tunnel decommissioning and other construction activities | <p>The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon, and salmon to Musqueam and is committed to avoiding or mitigating any potential effects.</p> <p>The Ministry designed a clear span bridge over the Fraser River South Arm and Deas Slough to avoid or minimize Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Musqueam’s Fisheries Department continues to be very helpful in the review of Green Slough concepts.</p> <p>Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat for fish and wildlife.</p> <p>Construction Environmental and Operational Construction plans will be developed. These will include the use of timing windows for undertaking in-stream works.</p> <p>As outlined in Section 4.3 (Underwater Noise), sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources will be effectively mitigated by scheduling activities during period of low tide, when work can be completed under shallow water conditions or in the dry.</p> |
| <p>Environmental Assessment (EA):</p> <ul style="list-style-type: none"> • Adequacy of methodology to address social and cultural effects • Process and associated timelines | <p>The Ministry acknowledges the importance of Musqueam’s involvement in the environmental assessment process and has provided funding during the Initial Consultation and Pre-Application process; it is committed to funding Musqueam’s participation in Application Review phase.</p> <p>Musqueam’s concerns related to Environmental Assessment including the adequacy of methodology to address social and cultural effects and process and association are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> |

| Concerns Identified to Date | Response |
|--|---|
| <p>Social effects of the Project on Musqueam’s ability to transfer knowledge, language and participate in socio-cultural practices</p> | <p>Social effects of the Project on Musqueam’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C of the Application. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3 and Section 10.3 of Part C of the Application.</p> <p>In summary, the following incremental Project-related effects, following mitigation measures provided in Part B, were identified for the exercise of Aboriginal Interests specifically related to cultural heritage for Musqueam:</p> <ul style="list-style-type: none"> • Project construction: <ul style="list-style-type: none"> ▫ Potential temporary direct (minor to moderate) effect on access related to instream construction activities and a potential temporary indirect (minor to moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses dependent on that access ▫ Potential temporary direct (minor to moderate) effect on quality of experience related to construction-related noise and a potential temporary indirect (minor to moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance • Project operation: <ul style="list-style-type: none"> ▫ Potential permanent direct (minor to moderate) effect on quality of experience related to traffic noise and a potential indirect (minor to moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance while engaged in those uses <ul style="list-style-type: none"> ▫ Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses |

| Concerns Identified to Date | Response |
|---|--|
| <p>Cumulative effects:</p> <ul style="list-style-type: none"> • Consideration of cumulative effects on Aboriginal rights • Absence of comprehensive study on cumulative effects on the Fraser River | <p>The Application includes historical context relating to changes in use over time by Musqueam and other Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by Musqueam or was otherwise available from publicly available sources. However, incremental cumulative effects on the exercise of Aboriginal Interests has not been considered separately of the cumulative effects assessments on VCs that are directly linked to the exercise of those Aboriginal Interests. Following the implementation of mitigation measures on the relevant VCs and ICs and on the incremental potential effects on the exercise of Aboriginal Interests, the residual adverse effects on the exercise of Aboriginal Interests are expected to be negligible (i.e., not measurable or detectable), and were not carried forward into an assessment of cumulative effects.</p> <p>While the Ministry acknowledges that Musqueam is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project. The Ministry understands that Musqueam is discussing this request with other provincial and federal ministries and agencies.</p> |
| <p>Concerns related to dredging, potential for increased vessel traffic and larger vessels resulting from Tunnel decommissioning</p> | <p>Dredging to deepen the river is not a component of this Project and the Ministry is unaware of any plans by others to dredge the river deeper. The Project, including the decommissioning of the Tunnel, will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River today. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> |
| <p>Potential effects on Fraser River flow rates after Tunnel removal</p> | <p>Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Flow rates are discussed in Section 4.1 (River Hydraulics).</p> |

| Concerns Identified to Date | Response |
|---|---|
| <p>Potential effects of run off and drainage along the highway corridor, including heavy metal transport from traffic to water and land, and management of runoff from the bridge</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. The bridge will collect and direct runoff to specifically designed biofiltration marshes at the bases of the main towers (one on Deas Island and one in Richmond). The purpose of these biofiltration marshes is to naturally clean the water prior to re-entry into the ecosystem. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciate change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning is anticipated. This is outlined in Sections 1.1.7.2 (Construction), 4.1 (River Hydraulics) and 4.2 (Water Quality and Sediment) of the Application.</p> |

3.0 Community Profile – Musqueam Indian Band

Musqueam is governed by a chief and council with two-year terms under an *Indian Act* electoral system. The current term for the 11-member council expires in January 2017.

Musqueam’s main community is based at the mouth of the North Arm of the Fraser River, within the limits of the City of Vancouver, where 671 of 1337 registered members reside. A second reserve is located across the river from this location, on Sea Island, within the City of Richmond, while a third reserve is located in Ladner, near Canoe Pass, off the South Arm of the Fraser River. At one time, the Musqueam had a fourth reserve (the first reserve set aside for them) further up the Fraser River at Qiqéyt (Brownsville). The Project alignment does not overlap any current or former Musqueam reserve lands, but falls almost entirely within the Musqueam’s traditional territory as described by Musqueam and provided in their Statement of Intent filed with the British Columbia Treaty Commission.

The Project area is situated approximately four km upstream of Canoe Pass, where Musqueam have an established Aboriginal right to fish for food, social, and ceremonial purposes pursuant to the Supreme Court of Canada’s decision in *R. v. Sparrow* [1990], 1 S.C.R. 1075 (SCC 1990). The Ministry understands the Musqueam take the view that their established right extends to areas beyond Canoe Pass. Musqueam territory was described in the *Sparrow* decision as “extending from the north arm of Burrard Inlet to the south shore of the main channel of the Fraser River including the waters of Burrard Inlet, the North Arm, the Middle Arm, the Main Channel, Canoe Pass (or passage) and Ladner Reach” (MIB 2015).

3.1 Musqueam Aboriginal Interests: Existing Conditions

This section provides a high level of summary of past, present, and desired future use of the proposed Project area and surroundings for traditional purposes are or may be connected with the exercise of Musqueam’s Aboriginal Interests. A more detailed discussion, including sources used, is provided under Musqueam in **Section 10.1.3.2 Existing Conditions**.

3.1.1 General

- Musqueam has Aboriginal Interests that are known to overlap or lie in the vicinity of the Project corridor, which includes a portion of the South Arm of the Fraser River.
- The current exercise of Aboriginal Interests by Musqueam at locations or in relation to resources that may be potentially affected by Project construction or operation is relatively high.

- Musqueam has identified past and ongoing effects that have altered and reduced use over time, constraining the current exercise of their Aboriginal Interests. Musqueam has identified a desire to regain or increase, based on past patterns and levels of use, the exercise of Aboriginal Interests in relation to locations or resources that may be affected by Project components or activities, including at or about but not limited to the reported location of 7uqtinus or λ'eqətines.

3.1.2 Fishing

- Musqueam has an established right to fish for food, social, and ceremonial purposes in the area of Canoe Pass on the South Arm of the Fraser River pursuant to *R. v. Sparrow* [1990], 1 S.C.R. 1075 (SCC 1990). The Project area lies immediately upstream of this area, and within the area where this right is considered by the Ministry to be asserted.
- Musqueam also assert an Aboriginal right to fish for food, social and ceremonial purposes in a broader area that includes, but is not limited to, all waters of the Fraser River – including its North Arm, Middle Arm, and South Arm – downstream of the Port Mann Bridge to the Strait of Georgia.
- All five species of Pacific salmon, steelhead, rockfish (rock cod, red snapper), herring and herring spawn, smelt, halibut, eulachon, trout, and sturgeon were fished historically by the Musqueam in their traditional territory, and all were important economically. The most commonly harvested marine mammals included harbour seal, sea lion, and porpoise; harvesting areas included the Fraser River estuary. At productive beaches within Musqueam traditional territory, abalone, barnacles, clams, chitons, cockles, mussels, crabs, crayfish, octopus, oysters, prawn, scallops, sea urchins, sea cucumber, shrimp, and seaweed were harvested and set aside for winter supplies; however, clams were the most abundant and heavily harvested, including at Boundary Bay.
- Fishing remains central to Musqueam, and they have specified that the waters outside Steveston, Canoe Passage, and the lower of the Fraser River, and Roberts Bank are their most intensive salmon harvesting areas. Salmon is a key species to the Musqueam, important for FSC and economic purposes.

3.1.3 Hunting/Trapping

- Musqueam report harvesting deer, wapiti (elk), bear, and mountain goat in several areas of their traditional territory, with deer and bear taken at Burns Bog within living memory, and deer harvested at areas along the South Arm of the Fraser River. Harvesting of game (e.g., deer, mountain goat) continues in more northerly parts of the traditional territory.
- Trapping of small land mammals was once common, with mink, muskrat, and otter harvested mainly for furs and beaver and rabbit harvested for both food and furs.

- More recently, hunting within Musqueam traditional territory has been focused primarily on wildfowl, including mallard, teal, widgeon, pintail, black duck, geese, grouse, and pheasant, and has taken place on the river banks, marshes, and meadows throughout the Fraser delta, including, but not limited to, the foreshore areas adjacent to the Musqueam reserve on Canoe Pass and those adjacent to Tsawwassen Lands. Musqueam identify mergansers as having specific cultural importance.

3.1.4 Gathering

- Common terrestrial plant foods consumed domestically were wapato, camas lily, huckleberry, blueberry, salmonberry, elderberry, bog cranberry, slehal (salal) berries, and Pacific crabapple. Of these, berries were particularly central. Bog cranberries were also a commodity, exchanged with other nations. Berry gathering and exchange remains important for food and ceremonial purposes.
- Musqueam report harvesting kelp, an important food and medicinal plant, throughout Roberts Bank and Sturgeon Bank historically. Kelp is currently traded for either because it cannot be found or is avoided due to contamination concerns.
- Musqueam identify Brunswick Point, which is approximately 12 km southwest of the Project corridor, as an important area for harvesting aquatic and terrestrial plants for food, medicinal, ceremonial, and manufacturing purposes. Intertidal species harvested include cattail, tule, and grasses.
- Other key harvesting areas for these plants include Westham Island, Canoe Pass, Musqueam Indian Reserve 4, and Ladner. Musqueam report that although they continue to harvest many of these resources, some are no longer accessible in former locations due in part to changing intertidal landscapes and barriers associated with commercial and industrial development.

3.1.5 Archaeology and Cultural Heritage Interests

- Musqueam identify several trails within the Fraser River estuary, including trails associated with the following place names: ʔ'eqtines (Lulu Island, across from Deas Island; sc'ələxwqən' (Ladner); and, spəxən (two trails on the eastern margins of Crescent Slough, at the western aspect of Burns Bog). They also reference a trail running north-south along the western shore of Lulu Island, to and from the Steveston area (qweya?xw, qwleyəm).

3.1.6 Other Related Interests

- Musqueam report that, historically, they could navigate from the North Arm of the Fraser River through what is currently known as Richmond (Lulu Island) and Delta, using slough channels as an alternate to ocean travel. These sloughs, which once supported fishing locations, no longer survive. Musqueam maintain that the remaining waterways have become reportedly congested with log booms and increasing vessel traffic, resulting in more vessel interactions, loss of fishing gear, and safety concerns.

4.0 Potential Effects

This section provides a summary of the methodology used to identify potential adverse effects of the proposed Project on the exercise of Aboriginal Interests by Aboriginal Groups during Project construction and operation, followed by a summary of potential effects on Musqueam's Aboriginal Interests, specifically. For a more detailed description of the methodology and a summary of the results, refer to **Section 10.1.3.3. Potential Effects**.

4.1 Methodology for Identification of Potential Effects

The first step in the effects assessment on Aboriginal interests was the identification of potential adverse effects on traditional use activities and related interests as a result of Project construction or operation. To evaluate these potential adverse effects, the findings of the following Valued Component (VC) chapters in Part B of the Application were considered, including identified mitigation measures, residual effects, cumulative effects and follow up strategies:

- **Section 4.4 Fish and Fish Habitat**
- **Section 4.6 Marine Mammals**
- **Section 4.7 Vegetation**
- **Section 4.8 Terrestrial Wildlife**
- **Section 5.2 Marine Use**
- **Section 5.3 Land Use**
- **Section 5.5 Visual Quality**
- **Section 6.1 Heritage Resources**
- **Section 7.1 Human Health**

The findings of the following Intermediate Component (IC) chapters were also considered in the assessment:

- **Section 4.1 River Hydraulics and River Morphology**
- **Section 4.2 Sediment and Water Quality**
- **Section 4.9 Air Quality**
- **Section 4.10 Atmospheric Noise**

The assessment of potential adverse effects of the Project on the exercise of Aboriginal Interests, including measures to address those effects, are presented in **Section 10.1.3.3** through **Section 10.1.3.5**, and largely applies the same methods used in Part B of the Application for the IC and VC assessments, as outlined in **Section 3.0 Assessment Methodology**.

In addition to information from the VC and IC assessments that support the assessment of potential effects on Aboriginal Interests, information from a Health Impact Assessment (HIA) undertaken to support Project planning, including mitigation recommendations, has been integrated into the assessment of potential effects on Aboriginal Interests. The HIA for the Project will be publicly available on the Project's website at www.masseytunnel.ca. A summary of the key findings is provided in **Section 7.2 Health Impact Assessment**.

4.2 Selection of Indicators

Four parameters were chosen as indicators to understand and evaluate potential Project-related effects on the exercise of Aboriginal Interests. The rationale for their selection is presented in the following table.

Table 2 Indicators for the Aboriginal Interests Assessment

| Indicator | Rationale for Selection |
|---|---|
| Access to preferred locations for the exercise of Aboriginal Interests | Project components or activities could result in changes in access to or patterns of travel between traditional use locations on land or water |
| Availability of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in distribution or movement, relative abundance, or habitat area or composition of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |
| Quality of preferred resources for the exercise of Aboriginal Interests | Project components or activities could result in changes in the real or perceived quality of traditional use resources (as informed by IC or VC assessments pertaining to these resources) in traditional use areas (as informed by information provided by Aboriginal Groups or available in public sources specific to the exercise of their Aboriginal Interests) |
| Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests | Project components or activities could result in: (1) direct sensory disturbance to traditional users (e.g., from noise, vibration); and/or (2) indirect changes to cultural practices, customs or traditions – i.e., cultural heritage or the expression and transfer of cultural values or ways of knowing (e.g., language, laws/governance, stories, spiritual beliefs) – tied to the cultural landscape or to the traditional use of specific traditional use locations or resources within that landscape. |

Potential adverse effects on the indicators noted above were analyzed in terms of the type and level of effect that Project components and activities may be expected to have on the exercise of Aboriginal Interests.

For the purposes of this assessment, no effect was understood to mean that no interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests would be expected. Where it was determined that an interaction, and potential effect, could occur, the following definitions were used to guide the characterization of the effect as negligible or measurable:

- Negligible – An interaction between Project components or activities and preferred locations or preferred resources for the exercise of Aboriginal Interests may occur, but modifications to the use of preferred options would not be expected.
- Measurable – Modifications to the exercise of Aboriginal Interests at preferred locations or in relation to preferred resources may be needed, and may be considered to be:
 - Minor (minimal or temporary modifications may be required to use preferred options),
 - Moderate (more frequent or longer term modifications may be required to use preferred options), or
 - Serious (permanent or indefinite modifications may be required potentially resulting in the loss of preferred options).

4.3 Identified Potential Effects

As noted above, the first step in evaluating potential adverse effects on Aboriginal Interests was a consideration of the findings for relevant Part B VCs and ICs, including identified mitigation measures, residual effects, cumulative effects and follow up strategies. The residual effects with the potential to result in an adverse effect on Aboriginal Interests are then carried forward in the assessment. Using the four indicators noted in the previous section, the potential Project-related effects and level of effect predicted in relation to Musqueam's exercise of Aboriginal Interests remaining after Part B mitigation are as follows:

Table 3 Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests

| | Construction | | Operation | | Residual Potential Effects |
|---|--------------|------------|------------|------------|--|
| | Negligible | Measurable | Negligible | Measurable | |
| River locations for traditional use as a result of changes to physical characteristics of these locations | ✓ | | ✓ | | |

4.4 Potential Project-Related Effects on Musqueam's Aboriginal Interests

Using the methodology presented in **Section 10.1.3.3 Potential Effects**, Table 7 provides the potential incremental Project-related effects, following mitigation of Project-related effects on Part B VCs and ICs as described in Part B, related to Musqueam's Aboriginal Interests as summarized in Existing Conditions were identified for Project Construction and Operation. A discussion of potential Project-related effects on fishing, hunting/trapping, gathering and archaeology and cultural heritage follows the table.

Table 7 Summary of Potential Project-Related Effects

| Indicator | Potential Project-related Effect |
|--|---|
| Project Construction | |
| Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • Potential temporary direct (minor to moderate) effect on access related to instream construction activities |
| Changes in Availability of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Experience in Exercising, or tied to the Exercise, of Aboriginal Interests | <ul style="list-style-type: none"> • For instream locations for traditional use, potential temporary indirect (minor to moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses dependent on that access • Potential temporary direct (minor to moderate) effect on quality of experience related to construction-related noise • Potential temporary indirect (minor to moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance |
| Project Operation | |
| Changes in Access to Preferred Locations for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Availability of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Preferred Resources for the Exercise of Aboriginal Interests | <ul style="list-style-type: none"> • None identified |
| Changes in Quality of Experience in Exercising, or tied to the Exercise, of Aboriginal Interests | <ul style="list-style-type: none"> • Potential indirect (minor to moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance while engaged in those uses • Potential permanent direct (minor to moderate) effect on quality of experience related to traffic noise • Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses |

4.5 Fishing

According to Musqueam, fishing is the most frequently practiced resource harvesting activity by its members on the Fraser River, with salmon being the key species. Other species of interest harvested throughout their traditional territory include eulachon, herring, smelt, halibut, eulachon, trout, and sturgeon. Musqueam also reports harvesting a variety of bivalves and other seafood.

The proposed Project has the potential to affect fishing practices through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred fishing locations by Musqueam, as a result of changes in river hydraulics or morphology, are expected to be negligible before mitigation. Potential changes in access to instream locations for fishing by Musqueam during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to fishing locations by Musqueam from instream construction activities are expected to be episodic and of short duration. Construction-related effects could potentially disrupt Musqueam's access to preferred fishing locations.

Mitigation measures identified in the fish and fish habitat assessment to address Project-related effects on fish are expected to be effective at addressing potential effects on the availability of fishing resources preferred by Musqueam. Further, as residual effects on fish identified in the fish and fish habitat assessment are not anticipated to affect population integrity, potential residual effects as a result of Project construction activities, would not be expected to measurably affect the availability of preferred fish resources.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of fishing resources preferred by Musqueam; therefore, Potential Project-related effects on Musqueam fishing would be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when fishing are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in in **Section 4.10 Atmospheric Noise** are expected to largely address a potential Project-related effect to the quality of experience while fishing. At preferred fishing locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Musqueam.

Section 5.5 Visual Quality predicts that residual effects to visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Musqueam is fishing. As this landscape has been previously modified, the potential Project-related effect on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Musqueam's Aboriginal Interests related to fishing are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.6 Hunting/Trapping

Musqueam report harvesting a range of wildlife species, including mammals such as deer and elk and a number of species of wildfowl. Harvesting has taken place on the river banks, marshes, and meadows throughout the Fraser delta including the foreshore areas adjacent to the Musqueam reserve on Canoe Pass and those adjacent to Tsawwassen Lands.

The proposed Project has the potential to affect hunting and trapping through changes in access to preferred locations, changes in availability of preferred locations, changes in quality of preferred resources and changes in quality of experience when fishing.

Potential changes in access to preferred hunting and trapping locations by Musqueam as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for hunting and trapping by Musqueam during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to hunting and trapping locations by Musqueam from instream construction activities, are expected to be episodic and of short duration. Construction-related effects could potentially be disruptive to Musqueam's access to preferred fishing locations.

Potential changes in access to upland locations for hunting and trapping by Musqueam resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with hunting and trapping locations.

Mitigation measures identified in the marine mammal and terrestrial wildlife assessments are expected to be effective at addressing potential effects on the availability of hunting and trapping resources preferred by Musqueam. Therefore, Project-related effects on hunting and trapping related to potential changes in the availability of resources would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for hunting and trapping by Musqueam; therefore, Potential Project-related effects on Musqueam fishing would be expected to be negligible.

Project operation is not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when hunting and trapping are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** to address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while hunting and trapping. At preferred hunting and trapping locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Musqueam.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Musqueam is hunting and trapping. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Musqueam's Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.7 Gathering

Musqueam report harvesting terrestrial plant foods including wapato, camas lily, various berries and Pacific crabapple. Musqueam report kelp as an important food and medicinal plant, and intertidal species of interest include cattail, tule, and grasses. Musqueam identify Brunswick Point, Westham Island, Canoe Pass, Musqueam Indian Reserve 4, and Ladner as key harvesting areas.

The proposed Project has the potential to affect gathering through changes in access to preferred locations, changes in availability of preferred resources, changes in quality of preferred resources and changes in quality of experience when gathering.

Potential changes in access to preferred gathering locations by Musqueam as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations for gathering by Musqueam during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to gathering locations by Musqueam from instream construction activities, are expected to be episodic and of short duration. Construction-related effects could potentially be disruptive to Musqueam's access to preferred gathering locations.

Potential changes in access to upland locations for gathering by Musqueam resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with gathering locations.

Mitigation measures identified in the vegetation assessment to address Project-related effects on terrestrial vegetation are expected to be effective at addressing potential effects on the availability of resources for the exercise of Aboriginal Interests related to gathering. Therefore, Project-related effects on gathering related to potential changes in the availability of vegetation would be expected to be negligible after the implementation of mitigation identified in Part B of the Application.

Mitigation measures identified in the assessments in **Section 4.2 Sediment and Water Quality** and **Section 4.9 Air Quality** are expected to be effective at addressing potential effects on the quality of preferred resources for gathering by Musqueam; therefore, Potential Project-related effects on gathering related to potential changes in the quality of resources would therefore be expected to be negligible.

Project operation activities are not expected to lead to perceptible changes in ground-borne vibration levels or result in residual adverse changes in air quality; therefore, Project-related air quality or vibration effects on the quality of experience when gathering are either not expected or would be expected to be negligible.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** address changes in noise levels during construction and operation, would also be expected to address the potential Project-related effect to the quality of experience while gathering. At preferred gathering locations that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Musqueam.

Section 5.5 Visual Quality predicts that residual effects on visual quality may be experienced only within 1 km of the new bridge; however, the addition of a new feature to this landscape may affect the quality of experience when Musqueam is gathering. As this landscape has been previously modified, potential Project-related effects on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal.

Additional mitigation to address potential incremental Project-related effects on Musqueam's Aboriginal Interests related to gathering are proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.8 Archaeology and Cultural Heritage Interests

Musqueam identify several trails and place names within the Fraser River estuary.

The proposed Project has the potential to affect Musqueam's Aboriginal Interests related to archaeology and cultural heritage through changes in access to preferred locations and changes in quality of experience.

Potential changes in access to locations related to Musqueam's archaeological and cultural heritage interests as a result of changes in river hydraulics or morphology are expected to be negligible before mitigation. Potential changes in access to instream locations related to Musqueam's interests related to archaeology and cultural heritage during Project operation are also expected to be negligible as the bridge is designed to be clear span.

Potential changes in access to locations related to Musqueam’s archaeological and cultural heritage interests from instream construction activities are expected to be episodic and of short duration. Construction-related effects could potentially disrupt Musqueam’s access to locations related to Musqueam’s archaeological and cultural heritage interests.

Potential changes in access to upland locations related to Musqueam’s archaeological and cultural heritage interests resulting from Project footprint effects during operation are expected to be negligible, as the majority of lands required for physical works is within the existing Highway 99 right of way and is not expected to overlap with locations related to Musqueam’s archaeological and cultural heritage interests.

With regard to noise, mitigation measures proposed in **Section 4.10 Atmospheric Noise** would also be expected to address the potential Project-related effect to the quality of experience while undertaking activities related to cultural heritage. At locations related to Musqueam’s archaeological and cultural heritage interests that overlap, or are in proximity to, known noise-sensitive locations for which Project operation-related effects may not be fully mitigable or reversible, changes in noise levels as a result of Project operation could have an effect on the quality of experience at those locations for Musqueam.

As reported in **Section 6.1 Heritage Resources**, no archaeological or historical sites were identified within the Project area during fieldwork; however, there may be other locations with intangible cultural value or meaning to Musqueam (e.g., spiritual or storied sites, named places) potentially affected by the Project. In addition, physical alterations to the landscape may affect archaeological or historical sites, and how this landscape is experienced culturally.

As a result, mitigation measures proposed in Part B are not expected to address a potential incremental and permanent Project-related effect tied to Musqueam’s Aboriginal Interests related to archaeology and cultural heritage that may be associated with the introduction of a new prominent feature to the cultural landscape. As this landscape has been previously modified by anthropogenic changes, the potential incremental Project-related effect on the quality of experience tied to the exercise of Aboriginal Interests is expected to be minimal, but permanently disruptive for Musqueam, who have identified a historical connection to, and continued or desired use of, sites or places that help define the cultural landscape in the Project area.

Additional mitigation to address this potential incremental effect that is not otherwise addressed in the Application is proposed in **Section 10.1.3.4** and summarized below under Mitigation.

4.9 Mitigation

This section provides a summary of mitigation measures identified to address potential Project-related effects on the exercise of Aboriginal Interests by Musqueam. For a more detailed discussion, refer to **Section 10.1.3.4 Mitigation**.

Mitigation measures identified for the relevant VCs and ICs in Part B of the Application were reviewed to assess their effectiveness at addressing potential Project-related effects on the exercise of Aboriginal Interests related to those VCs. Examples of mitigation that are proposed in the Application to address potential effects on VCs and ICs, with the potential to result in an effect on Aboriginal Interests, include:

- Avoiding fisheries sensitive timing windows during key Project activities.
- Developing a Marine Access Management Plan to ensure marine use activities, including those supporting Aboriginal Interests, can continue during Project construction.
- Scheduling activities with the potential to generate underwater noise to avoid potential effects on marine mammals.
- Development and implementation of a Terrestrial Vegetation and Wildlife Management Plan with measures to minimize disturbance and loss of vegetation, prevent soil compaction, and minimize clearing in order to minimize effects on vegetation.

These measures are expected to be largely effective at avoiding, reducing, or otherwise managing potential Project-related effects on the exercise of Aboriginal Interests during Project construction and operation.

Recognizing some measurable effects on Musqueam's Aboriginal Interests could remain following the application of mitigation to address potential effects on the relevant VCs and ICs in Part B, the following additional measures have been identified to address such effects:

- Ongoing consultation with Musqueam regarding proposed measures, management plans, and monitoring programs related to intermediate components and valued components assessments; and
- Development of a Cultural Heritage Management Plan.

5.0 Residual Effects

With the implementation of mitigation measures identified in **Section 10.1.3.4** and summarized above, residual adverse effects of the proposed Project on the exercise of Aboriginal Interests are expected to be negligible (i.e., not measurable or detectable), and are not further assessed.

6.0 Summary and Conclusion

Part C of the Application builds on consultation undertaken to date to understand Musqueam's Aboriginal Interests and provides for an assessment of potential Project-related effects of the Project on Aboriginal Interests.

The Ministry began consultations with Musqueam prior to the submission of the Project Description, which is the end of the Initial Consultation Phase. Both EAO and the Ministry consulted with Musqueam during the Pre-Application Phase, which concluded with the submission of the Application. The main concerns expressed by Musqueam during consultations include:

- Musqueam's rights to harvest under the Sparrow decision;
- Aboriginal participation and Project-related opportunities;
- Effects to fish and fish habitat; and
- Cumulative effects;
- Trend in development of the lower Fraser River;
- Adequacy of Environmental Assessment (EA) methodology to address social and cultural effects;
- EA Process for the Project and its associated timelines;
- Social effects of the Project on Musqueam's ability to transfer knowledge, language and participate in socio-cultural practices;
- Consideration of cumulative effects on Aboriginal rights;
- Absence of a comprehensive study of cumulative effects on the Fraser River;
- Concerns related to dredging, potential for increased vessel traffic and larger vessels resulting from Tunnel decommissioning;
- Potential effects on flow rates after Tunnel removal; and
- Potential effects of run off and drainage along the highway corridor, including heavy metal transport from traffic to water and land, management of runoff from the bridge.

Based on information provided by Musqueam and other publicly-available sources, the Ministry developed a summary of past, present and desired future use of the proposed Project area and its surroundings for the purposes of fishing, hunting/trapping, gathering, archaeology and cultural heritage interests and other related interests. This summary indicates that Musqueam has, does and intends to continue to use the Fraser River for cultural purposes.

Relying first on the results of the effects assessments for related VCs and ICs in Part B, the assessment of potential effects of Musqueam's Aboriginal Interests considered four indicators:

1. Access to preferred locations for the exercise of Aboriginal Interests;
2. Availability of preferred resources for the exercise of Aboriginal Interests;
3. Quality of preferred resources for the exercise of Aboriginal Interests; and
4. Quality of experience in exercising, or tied to the exercise of, Aboriginal Interests.

As reviewed in **Section 10.1.3.3** and **Section 10.1.3.4**, the mitigation measures, management plans, and monitoring programs identified in Part B of the Application for ICs or VCs linked to the exercise of Aboriginal Interests are expected to be largely effective at addressing the incremental Project-related effects noted above on the exercise of Aboriginal Interests by Musqueam Indian Band, except in the following potentially measurable cases:

- Project construction:
 - Potential temporary direct (minor to moderate) effect on access related to instream construction activities and a potential temporary indirect (minor to moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses dependent on that access
 - Potential temporary direct (minor to moderate) effect on quality of experience related to construction-related noise and a potential temporary indirect (minor to moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance
- Project operation:
 - Potential permanent direct (minor to moderate) effect on quality of experience related to traffic noise and a potential indirect (minor to moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses that may be avoided due to direct sensory disturbance while engaged in those uses
 - Potential permanent indirect (moderate) effect on quality of experience (i.e., cultural heritage) tied to traditional uses due to visual disturbance to the cultural landscape that informs and supports those uses

The following additional measures have been identified to address the above-noted effects:

- Ongoing consultation with Musqueam regarding proposed measures, management plans, and monitoring programs related to VC and IC assessments; and
- Development of a Cultural Heritage Management Plan.

With the implementation of mitigation proposed to address potential effects on VCs and ICs, as well as additional mitigation proposed to address potential residual effects on Aboriginal Interests, no effects on the exercise of Aboriginal Interests by Musqueam, as a result of the Project, are expected.

ENVIRONMENTAL ASSESSMENT PROCESS

An environmental assessment of the Project is required under the B.C. *Environmental Assessment Act* (B.C. *EAA*), S.B.C. 2002, c. 43, and permits to construct and operate can only be received once the environmental assessment process is complete and an Environmental Assessment Certificate (EAC) has been issued. If the Project is approved, an EAC will be awarded to and held by the Ministry. The Reviewable Projects Regulation B.C. Reg. 370/2002 under the B.C. *EAA* sets out the criteria for reviewable projects.

On December 16, 2015, the B.C. Environmental Assessment Office (EAO) issued a Section 10(1)(c) Order confirming that the Project is a reviewable project pursuant to the B.C. *EAA*, and that it requires an EAC.

The Project as proposed is not subject to review under the *Canadian Environmental Assessment Act, 2012*, S.C. 2012, c. 19, s. 52, since it does not meet the definition of a physical activity under the Schedule of Physical Activities in the Regulations Designating Physical Activities SOR/2012-147.

EAO is a neutral agency that manages the review of proposed major projects in British Columbia, as required by the *Environmental Assessment Act*.

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|---|-----------------|-------------------------|
| Adequacy of Environmental Assessment (EA) methodology to address social and cultural effects | <p>Concerns related to the adequacy of Environmental Assessment are outside the scope of the Project and have been referred to the Environmental Assessment Office (EAO).</p> <p>Social and cultural effects of the project are considered in Part C of the Environmental Assessment Application (Application). Where Aboriginal Groups values and perspectives have been provided to the Proponent regarding environmental, economic, social, heritage or health valued components (VCs), they have been incorporated, where applicable into the Part B assessment of those VCs.</p> | Referred to EAO | None |

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|---|-----------------|-------------------------|
| Concern with the inclusion of certain Aboriginal Groups in Project consultation per Schedule B of the Section 11 Order | Consultation is being undertaken in accordance with the requirements of the Section 11 Order and as outlined in the Aboriginal Consultation Plan. Further discussion regarding the assignment of Aboriginal Groups to Schedule B of the Section 11 Order should be undertaken directly with EAO. | Referred to EAO | None |
| EA Process for the Project and its associated timelines | Concerns relating to the EA process and its associated timelines were referred to EAO. EAO issued a memo to members of the Working Group on March 18, 2016 in response to questions and concerns related to the EA process and its associated timelines. The Ministry understands that EAO responded to Musqueam’s queries regarding the EA Process and associated timelines. | Referred to EAO | None |

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|--|-----------------|-------------------------|
| Effectiveness and nature of the EA process as well as current volume of EAs underway | Concerns relating to the broad concern related to the effectiveness and nature of the Environmental Assessment Process have been referred to EAO. While the Ministry is unable to address the concern related to the current volume of EA's underway, the Ministry has and will continue to work with Musqueam to support their participation in this particular Project's review process and to plan for consultation activities in a manner that is mindful of the current volume of referrals that Musqueam is working on. Support to date has included Pre-Application capacity funding and the development of a Musqueam-specific Consultation Plan outlining agreed to consultation activities. The Ministry is working with Musqueam on a Memorandum of Understanding that is intended to further support Musqueam's involvement in the EA Process and associated consultation. | Referred to EAO | None |
| Use of MARR database for assessing Strength of Claim | Concerns related to the strength of claim assessment have been referred to EAO and MARR. | Referred to EAO | None |
| Standard EA methodology's use of the term "baseline" – to Musqueam this means more that current levels | The Ministry acknowledges that Musqueam's interpretation/use of the term "baseline" differs from the standard definition/use of this terminology for the purposes of this EA. | Addressed | None |

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|---|-----------------|--|
| Request for a Musqueam Specific Project-related study to be undertaken in advance of the start of the Application Review Phase | The Ministry funded a Musqueam Project-related study during the Initial Consultation Phase and will work with Musqueam during the Application Review Phase to support Musqueam in sharing information, knowledge and input in relation to the Project and its review process. The Ministry anticipates further discussion regarding the request for an additional study during Memorandum of Understanding (MOU)-related discussions. | Ongoing | MOU-related discussions, including the request for an additional study |
| EA guidelines including Application Information Requirements (AIR) template were developed without First Nations' consultation | This concern is beyond the scope of the Project's EA process and pertains to EAO process. Concerns related to First Nations consultation during the development of the AIR template have been referred to EAO. | Referred to EAO | None |
| Lack of resources and funding for participation in the EA Process | The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. The Ministry is working with Musqueam on a MOU that is intended to support Musqueam's involvement in the EA Process and associated consultation. The Ministry understands that Musqueam wishes to address Application Review Phase funding-related needs and concerns in the context of the MOU. | Ongoing | MOU-related discussions, including Application Review Phase funding |

ABORIGINAL INTERESTS

There are potential Project related impacts to Musqueam title, Rights and culture. Potential effects and the level of effect predicted include:

1. Access to preferred locations for the exercise of Aboriginal Interests (access to river locations for traditional use as a result of changes to physical characteristics of these locations).
2. Availability of preferred resources for the exercise of Aboriginal Interests (availability of fish, marine mammal, vegetation and terrestrial wildlife resources for Traditional Use).
3. Quality of preferred resources for the exercise of Aboriginal Interests (quality of water used for cultural purposes, quality of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use).
4. Quality of experience of exercising, or tied to the exercise, of Aboriginal Interests (quality of experience tied to the traditional use of river locations as a result of changes to the physical characteristics of the location; quality of experience tied to access of instream and upland areas locations for traditional use; quality of experience tied to use of water for traditional purposes; quality of experience tied to the traditional use of fish, marine mammal, vegetation and terrestrial wildlife resources for traditional use; and quality of experience while engaged in or tied to traditional use as a result of changes in air quality, noise, ground-borne vibration and to the cultural landscape).

Measureable Effects

Access for traditional use

- Cultural landscape
- Instream locations (during construction)

Quality of experience while engaged in or tied to traditional use

- cultural landscape
- Instream locations (during construction)

No, Negligible or Moderate Effects

Quality of experience while engaged in or tied to traditional use

- Noise

Negligible Effects

Access for traditional use

- Instream locations
- River locations
- Upland locations

ABORIGINAL INTERESTS

Quality for Traditional Use

- Water
- Fish resources
- Marine mammal resources
- Vegetation resources

Quality of experience while engaged in or tied to traditional use

- Fish resources
- Instream locations (during construction)
- Marine mammal resources
- River locations
- Terrestrial wildlife resources
- Upland locations
- Water
- Vegetation resources

Availability for Traditional Use

- fish resources
- Marine mammal resources
- Terrestrial wildlife resources
- Vegetation resources

No to Negligible Effects

Quality of experience while engaged in or tied to traditional use

- changes to the cultural landscape

No or Negligible Effects

Quality of experience while engaged in or tied to traditional use

- Air quality
- Ground-borne vibration

ABORIGINAL INTERESTS

High, Short-term Probability of Effect

- Disturbance to residential, commercial and industrial land uses
- Disturbance to recreational uses near the new bridge

Moderate, Long-term Probability of Effect

- Disturbance to visual quality

Low, Short-term Probability of Effect

- Barn swallow habitat loss (construction period)
- Physical injury or mortality to fish through crushing or entrainment (construction period)

Low, Long-term Probability of Effect

- Barn owl mortality

No Significant Residual or Cumulative Effects

- Air quality
- Fish and fish habitat
- Heritage resources
- Marine access
- Marine mammals
- River hydraulics and river morphology
- Sediment and water quality
- Terrestrial Wildlife
- Vegetation

The Ministry has developed mitigation measures to address these Potential effects. Residual effects on the exercise of Aboriginal Interests by Musqueam as a result of the Project are not expected.

| Issue | Proponent Response | Status | Next Steps by Proponent |
|---|--|--------------------------|--|
| Potential impacts to Musqueam title, Rights and culture | Potential Project related impacts to Musqueam title, Rights and culture, the level of effect predicted, and mitigation measures are outlined the Application. The Ministry will continue to consult with Musqueam to ensure any effects are minimized. | Addressed in Application | Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application |
| Social effects of the Project on Musqueam’s ability to transfer knowledge, language and participate in socio-cultural practices | Social effects of the Project on Musqueam’s ability to transfer knowledge, language and participate in socio-cultural practices are discussed in Part C. Specifically, potential effects on cultural heritage (such as the ability to transfer knowledge, language, and participate in socio-cultural practices that support the maintenance of this heritage within and between generations) are considered through both direct and indirect effect pathways on the exercise of Aboriginal Interests as a result of Project components or activities. This analysis, which was dependent on cultural heritage information provided by Aboriginal groups or otherwise available through public sources, occurs predominantly within Section 10.1.3.3 Potential Effects of Part C of the Application, with results also provided on a nation-by-nation basis in Section 10.1.3.8 and Section 10.3 of Part C of the Application. | Addressed in Application | Ongoing consultation and implementation of mitigation measures outlined in all Sections of the Application |

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|---|-----------|-------------------------|
| Consideration of cumulative effects on Aboriginal rights | The Application includes historical context relating to changes in use over time by Musqueam and other Aboriginal Groups (i.e., cumulative effects on this use to date), where this information has been provided to the Ministry by Musqueam or was otherwise available from publicly available sources. | Addressed | None |
| Absence of a comprehensive study of cumulative effects on the Fraser River | While the Ministry acknowledges that Musqueam is interested in a comprehensive study of cumulative effects on the Fraser River, this is outside the scope of the Project. The Ministry understands that Musqueam is discussing this request with other provincial and federal ministries and agencies. | Addressed | None |

ABORIGINAL CONSULTATION

Aboriginal Interests, defined as asserted or determined Aboriginal rights, including title, and treaty rights, are known to overlap or lie in the vicinity of the Project corridor. Potential adverse effects on the exercise of Aboriginal Interests as a result of Project construction and operation have been identified.

Mitigation measures to address potential Project-related effects on intermediate components (ICs) and valued components (VCs) associated with the exercise of Aboriginal Interests are expected to be effective. With the application of mitigation, potential effects on the exercise of Aboriginal Interests are predicted to be negligible except in specific cases during Project construction and operation. To address potential effects during Project construction and operation, the development of an Archaeological and Heritage Resources Management Plan is proposed.

In addition to mitigation measures proposed to address potential effects on ICs and VCs, ongoing engagement between the Ministry and Schedule B Aboriginal Groups will be undertaken. Such engagement will take place during Application Review and, if the Project is approved, following the issuance of an Environmental Assessment Certificate (EAC). Engagement will involve consultation on management plans and monitoring programs related to the exercise of Aboriginal Interests.

Ongoing engagement is also proposed to address other matters of environmental, economic, social, heritage, and health concern raised Aboriginal Groups during the pre-Application period. With this ongoing engagement, residual effects on the exercise of Aboriginal Interests or other matters of concern as a result of the Project are not expected.

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|--|----------------|--|
| <p>Consultation with Musqueam is required for any land disposition, including surplus lands potentially sold to adjacent farmers</p> | <p>As part of the Project, agricultural land will be protected as much as practical. Once the project is completed there will be a determination of surplus lands, if any, and disposition will follow the appropriate process including consultation.</p> | <p>Ongoing</p> | <p>Appropriate consultation will be undertaken on any disposition</p> |
| <p>Capacity funding to facilitate participation in the Project review process</p> | <p>The Ministry provided funding for the Pre-Application Phase and has committed to providing funding for the Application Review Phase. The Ministry is working with Musqueam on a Memorandum of Understanding that is intended to support Musqueam’s involvement in the EA Process and associated consultation. It is the Ministry’s understanding that Musqueam wishes to address Application Review Phase funding-related needs and concerns in the context of the MoU.</p> | <p>Ongoing</p> | <p>MOU-related discussions, including Application Review Phase funding</p> |
| <p>Appropriate use of information shared by Musqueam as it relates to confidentiality and dissemination</p> | <p>The Ministry understands and respects that certain information shared by Musqueam may be considered confidential. The Ministry is subject to the provisions of the <i>Freedom of Information and Protection of Privacy Act</i>. Subject to the requirements of applicable laws, the Ministry will respect Musqueam requests to keep information confidential.</p> | <p>Ongoing</p> | <p>MOU-related discussions, including provisions related to the use of information</p> |

| | | | |
|--|--|-----------|---|
| Musqueam requests a Musqueam-only site visit | Per this request, the Ministry undertook a site visit with Musqueam. No other Aboriginal Groups were present. | Addressed | None |
| Funding for Traditional Use Study | The Ministry signed a funding agreement with Musqueam which provided funding for a Traditional Use Study. Musqueam submitted a Project related study to the Ministry, but did not submit a Traditional Use Study. The Ministry is working with Musqueam with respect to the sharing of Traditional Use information and expects that related discussions will occur in the context of an MOU. | Ongoing | MOU-related discussions, including the sharing of Traditional Use information and study |

ABORIGINAL PARTICIPATION AND PROJECT-RELATED OPPORTUNITIES

The Ministry is actively exploring opportunities to provide benefits, economic and non-economic, to Aboriginal Groups that are directly affected by the Project. Opportunities include employment, training, and contracting as well as participation in environmental enhancement and other components of the Project.

Prior to the Pre-Application Phase of the Project, the Ministry worked with Schedule B Aboriginal Groups to determine appropriate tools to support consultation. Consultation activities were based on the specific needs and preferences of these Aboriginal Groups and the Consultation Plan included individualized plans that were co-developed and reviewed.

The Project's Aboriginal Consultation Plan has been developed in consultation with Schedule B Aboriginal Groups, in order to meet the Aboriginal consultation requirements as delegated by EAO and to maintain and, where possible, enhance positive working relationships between the Ministry and the respective Aboriginal Groups.

The objectives and requirements of the Aboriginal Consultation Plan are to:

- Provide relevant Project-related information in a timely and effective manner that supports an understanding of the nature of the Project and its potential adverse effects on Aboriginal Interests
- Plan and implement mutually acceptable consultation activities that support effective participation of Aboriginal communities in the EA as well as related regulatory and permitting processes
- Establish and maintain dialogue throughout the EA as a means of providing opportunities to respond to outstanding concerns
- Provide opportunities for Aboriginal Groups to share views of the Project with the Ministry and EAO within reasonable timeframes
- Provide opportunities for Aboriginal Groups to identify potential adverse effects of the proposed Project on Aboriginal Interests, including cumulative effects and, to the extent appropriate, develop ways to mitigate or otherwise accommodate potential adverse effects
- Involve Aboriginal Groups, where possible, in relevant studies including, but not limited to, archaeological fieldwork.
- Incorporate community and traditional knowledge in Project components
- Document and report to EAO on the Ministry's Aboriginal consultation program at times specified by EAO.

| Issue | Proponent Response | Status | Next Steps by Proponent |
|---|--|------------------|---|
| <p>Opportunities for cultural recognition and naming, art and interpretive signage. Funding for cultural interpretation and signage</p> | <p>The Ministry is exploring opportunities for cultural recognition and naming and will work with Musqueam on these opportunities and determine any related funding requirements.</p> | <p>Ongoing</p> | <p>Further engagement with Musqueam is planned to explore opportunities related to cultural recognition and naming, art and interpretive signage.</p> |
| <p>Project-related employment, training, contracting, and economic development opportunities. Adequate training time to take full advantage of potential future Project work activities</p> | <p>The Ministry is committed to working with Musqueam to identify potential employment, training, contracting and economic development. The Ministry acknowledges that Musqueam wants to prepare its membership for employment opportunities and will work with Musqueam to identify ways to support community preparedness.</p> | <p>Ongoing</p> | <p>MOU-related discussions, including identification of potential employment, training, contracting and economic development opportunities and timelines.</p> |
| <p>Interest in revenue sharing opportunities from tolling</p> | <p>The Province intends to fund the Project, at least in part, through user tolls. This is consistent with the provincial tolling guidelines. Tolling recognizes that those directly benefitting from the new infrastructure in terms of time savings and reliability should help pay for the Project. This ensures that the needed improvements can proceed now, rather than years in the future when improvements will be even more overdue. In accordance with the provincial tolling strategy, revenue from tolling is only used to defray the costs of designing, constructing, operating and maintaining highways.</p> | <p>Addressed</p> | <p>None</p> |

4.1 RIVER HYDRAULICS

The proposed bridge will have a clear-span, which eliminates potential changes to river hydraulics or river morphology resulting from the new structure. The Fraser River South Arm is dynamic with scour in the order of several metres during freshet and migrating sand dunes with heights of up to four metres. Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. Suspended sediment load in the Fraser River is naturally high and the temporary increase in suspended sediments anticipated during Tunnel removal is expected to be relatively minor. Tunnel removal is expected to result in temporary bed lowering between the Tunnel and Lulu Island-Delta water main; however, no permanent effect on the Lulu Island-Delta watermain is expected.

Effects

A negligible effect to access to river locations for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of river locations has been determined.

Mitigation

Monitor the riverbed within 100 metres upstream and downstream of the watermain.

Stockpile appropriately-sized rock near the Project site, for priority scour protection repairs at the water main crossing.

Establish on-call contracts with a qualified registered professional and a qualified marine contractor prior to Tunnel removal, to ensure that scour protection repairs can be designed and implemented on short notice.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology are expected.

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|---|--------------------------|--|
| Potential effects on salt wedge from decommissioning of the Tunnel | Potential Project-related effects of Tunnel removal on salt wedge from decommissioning the Tunnel are addressed in Sections 4.1 (River Hydraulics) and 4.4 (Fish and Fish Habitat) of the Application. The timing window during which the salinity of the water exceeds the threshold for irrigation is almost identical with and without the Tunnel. The Tunnel does not substantially protrude above the riverbed and removal will not affect the behaviour of the salt wedge in any significant way with respect to the availability of water that is suitable for irrigation or to fish and fish habitat. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.1.4 (River Hydraulics Mitigation Measures) and 4.4.4 (Fish and Fish Habitat Mitigation Measures) |
| Potential effects on flow rates after Tunnel removal | Removal of the Tunnel is not expected to result in any changes in water level or flow splits between the main channel and nearby channels. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.1.4 (River Hydraulics Mitigation Measures) |

4.2 SEDIMENT AND WATER QUALITY

The proposed bridge will have a clear-span, which reduces potential effects to sediment and water quality within the Fraser River South Arm. During Tunnel decommissioning, a minor, temporary increase in turbidity, as compared with baseline conditions, is anticipated. No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.

Effects

A negligible effect on quality of water used for cultural purposes has been determined.

A negligible effect on quality of experience tied to use of water for cultural purposes has been determined.

Mitigation

Avoid effects through Project design.

Incorporate a stormwater collection and distribution system (stormwater detention ponds and biofiltration swales) into bridge design that will convey and discharge stormwater runoff to appropriate upland infrastructure for proper treatment.

Develop Construction Environmental Management and Operational Environmental Management plans.

Control suspended sediment during Tunnel decommissioning. Employment of construction methods that minimize levels of Project-induced turbidity. Use spoil barges equipped with sediment containment system (filter cloth, concrete lock blocks, straw bales) to transport removed material off-site.

Control suspended sediment during Project construction in and adjacent to Deas and Green Sloughs. Use of sediment control measures such as turbidity curtains and de-watered cofferdams.

Monitor water quality during construction.

Use timing windows for undertaking in-stream works.

Residual & Cumulative Effects

No Project-related residual or cumulative effects on river hydraulics and river morphology or sediment and water quality are expected.

| Issue | Proponent Response | Status | Next Steps by Proponent |
|---|---|---------------------------------|---|
| <p>Potential effects on sedimentation after Tunnel removal</p> | <p>No appreciable change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning, is anticipated.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.2.4 (Sediment and Water Quality Mitigation Measures)</p> |
| <p>Potential effects of run off and drainage along the highway corridor, including heavy metal transport from traffic to water and land, management of runoff from the bridge</p> | <p>The proposed bridge will have a clear-span, which reduces potential effects on sediment and water quality within the Fraser River South Arm associated with Project construction and operation. The bridge will collect and direct runoff to specifically designed biofiltration marshes at the bases of the main towers. The purpose of these biofiltration marshes is to naturally clean the water prior to re-entry into the ecosystem. During Tunnel decommissioning, a minor, temporary increase in turbidity is anticipated. No appreciate change in water quality, related to the re-suspension or re-distribution of sediments during Tunnel decommissioning is anticipated.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Section 4.2.4 (Sediment and Water Quality Mitigation Measures)</p> |

| Issue | Proponent Response | Status | Next Steps by Proponent |
|---|--|---------------------------------|-------------------------|
| <p>Effect of shipping on carbon dioxide levels in the water, concern with effluent acidity levels and carbon outputs from ships affecting water and air quality</p> | <p>This is outside the scope of the Project. The Project will not appreciably increase the size, or volume, of vessels using the Fraser River South Arm channel, as the top of the Tunnel is level with the bottom of the River. Other factors, including the Metro Vancouver water main to the west of the Tunnel, other utility crossings, and the width of the river itself, limit the size of vessels that can navigate the river.</p> | <p>Addressed in Application</p> | <p>None</p> |
| <p>Use and disposal of dredged and other material in the river</p> | <p>The minimal amount of dredged sediment will be placed on a barge as will sections of the concrete mattress and brought to shore for applicable testing prior to disposal/recycling. The shot rock removed will be stored on shore and potentially reused as further protection to the Metro Vancouver watermain just downstream of the project.</p> | <p>Addressed in Application</p> | <p>None</p> |

4.4 FISH AND FISH HABITAT

The proposed bridge will have a clear span over the Fraser River South Arm and Deas Slough, avoiding or minimizing Project-related effects on fish and fish habitat. The small area of fish habitat affected by the Project will be offset or improved by proposed habitat enhancements, including restoring Green Slough to its historic alignment, to achieve net environmental benefits for fish and fish habitat. Given the disturbed nature of much of the Project alignment, re-vegetation and restoration of areas within the Project alignment, including under the new bridge and adjacent to relocated ditches, represents an opportunity to provide a net improvement to ecological conditions. The productive capacity of local ecosystems will be enhanced by improvements to local water quality; removal of non-native species; and replanting with species that provide habitat value for fish and wildlife.

Effects

A negligible effect on the availability of fish resources for traditional use has been determined.

A negligible effect on quality of fish resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of fish resources has been determined.

Mitigation

Avoid effects through Project design.

Apply best management and environmental management practices.

Develop Construction Environmental Management and Operational Environmental Management plans.

Use timing windows for undertaking in-stream works.

Erosion and sediment control.

Habitat enhancement and offsetting.

Residual & Cumulative Effects

There is a low, short-term probability of physical injury or mortality to fish through crushing or entrainment during the construction period.

No significant Project-related residual or cumulative effects on fish and fish habitat are expected.

| Issue | Proponent Response | Status | Next Steps by Proponent |
|--|--|---|---|
| Protection of Musqueam 's rights to harvest under the Sparrow decision | The Ministry acknowledges the Sparrow decision of May 1990 and Musqueam's established right to fish for food, social and ceremonial purposes in the area of Canoe Pass on the South Arm of the Fraser River. The Ministry is committed to avoiding or mitigating any potential effects on fish and fish habitat. | Acknowledged and addressed in Application | Ongoing consultation and implementation of mitigation measures in Section 4.4.4 (Fish and Fish Habitat Mitigation Measures) |
| Potential effects to fish and fish habitat, including species of cultural and economic importance such as eulachon, sturgeon, salmon | The Ministry understands the significance of culturally and economically important fish such as eulachon, sturgeon, salmon to Musqueam and is committed to avoiding or mitigation any potential effects | Addressed in Application | Implementation of mitigation measures outlined in Section 4.4.4 (Fish and Fish Habitat Mitigation Measures) |
| Importance of Musqueam Fisheries Department reviewing Green Slough concept | The Ministry will continue to meet with Musqueam's Fisheries Department on the Green Slough concept and any other component of the Project. The Green Slough concept has been shared with Musqueam, including representatives of Musqueam Fisheries Department, for input. | Ongoing | Ministry will continue to meet with Musqueam's Fisheries Department |
| Importance of sloughs, tributaries (Serpentine River), riparian work for fish stocks | Fish and fish habitat is discussed in Section 4.4 (Fish and Fish Habitat). The Ministry acknowledges the importance of sloughs, tributaries and riparian areas for fish stocks and is undertaking enhancement and riparian works. The Ministry will continue to seek Musqueam's input in the development of related plans. | Addressed in Application | Ministry will continue to seek Musqueam's input in the development of plans |

| <p>Potential effects of pile driving, blasting and underwater noise generated by Tunnel decommissioning and other construction activities.</p> | <p>There will be no direct pile driving in the river. Sources of construction-related underwater noise such as driving piles along the edges of Deas Slough will be temporary in nature. Propagation of underwater noise from these sources can be mitigated effectively by scheduling such activities during periods of low tide, when work can be completed under shallow water conditions or in the dry, thereby minimizing potential effects. No Project-related residual or cumulative effects on underwater noise conditions are expected. Underwater Noise and Fish and Fish Habitat are addressed in Sections 4.3 and 4.4 of the Application.</p> | <p>Addressed in Application</p> | <p>Implementation of mitigation measures outlined in Sections 4.3.4 (Underwater Noise Mitigation Measures 4.4.4 (Fish and Fish Habitat Mitigation Measures))</p> |

4.6 MARINE MAMMALS

Marine mammals, specifically harbor seals and sea lions, are known to use marine areas within the Project alignment. Other species of conversation interest, including southern resident killer whales, do not occur in the Fraser River. Underwater noise during construction is the key area of focus for potential Project-related effects on marine mammals. Underwater noise in the Fraser River South Arm from existing sources currently exceeds thresholds for disturbance to marine mammals approximately 20% of the time. The distance from source within which seals could hear underwater noise generated by construction activities is estimated at no more than 7.5 km.

Effects

A negligible effect on the availability of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of marine mammal resources for traditional use has been determined.
 A negligible effect on quality of experience tied to the traditional use of marine mammal resources has been determined.

Mitigation

Apply standard industry and best management practices to activities such as pile driving that have the potential to generate underwater noise to ensure sound thresholds for the protection of marine mammals are adhered to.
 Marine Mammal Management Plan to be incorporated into the Construction Environmental Management Plan
 Monitor underwater noise.

Cumulative Effects

No significant Project-related residual or cumulative effects on marine mammals are expected.

| Protection of Musqueam 's Aboriginal Interests – availability, quality, experience tied to traditional use of marine mammal resources for traditional purposes.. | The Ministry acknowledges the Sparrow decision of May 1990 and Musqueam's established right to fish for food, social and ceremonial purposes in the area of Canoe Pass on the South Arm of the Fraser River. The Ministry is committed to avoiding or mitigation any potential effects on marine mammals. | Acknowledged and addressed in Application | Ongoing consultation and implementation of mitigation measures in Section 4.6.4 (Marine Mammals Mitigation Measures) |

4.7 VEGETATION

The Highway 99 corridor is a highly developed area and vegetation along the Project alignment reflects the influence of past development.

Project components and activities will be primarily located within the existing Highway 99 right-of-way, where the vegetation consists mainly of grassy, mowed verges. Through Project planning, the Ministry has taken steps to avoid or minimize Project-related effects on at-risk ecosystems, primarily cattail marsh and estuary marsh that occur in the vicinity of the Project. No at-risk vegetation species were observed during field surveys and their presence is unlikely, given the disturbed nature of habitats present.

Effects

A negligible effect on the availability of vegetation resources for traditional use has been determined.

A negligible effect on quality of vegetation resources for traditional use has been determined.

A negligible effect on quality of experience tied to the traditional use of vegetation resources has been determined.

Mitigation

Minimize potential effects through Project design.

Adhere to best management and environmental, terrestrial vegetation and wildlife management practices. Apply best practices such as flagging of at-risk ecosystems to avoid encroachment during construction.

Offset and enhance habitat. Create comparable habitat within the Project alignment to offset unavoidable potential Project-related effect, limited to a small reduction in area of the cattail marsh that overlaps with Project components. Replant disturbed areas with native species.

Invasive species management plan included in the Construction Environmental Management Plan

Cumulative Effects

No significant Project-related residual or cumulative effects on vegetation are expected.

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|--|---|---|---|
| Protection of Musqueam 's Aboriginal Interests – availability, quality, experience tied to traditional use of vegetation resources for traditional purposes. | The Ministry acknowledges the Sparrow decision of May 1990 and Musqueam's established right to fish for food, social and ceremonial purposes in the area of Canoe Pass on the South Arm of the Fraser River. The Ministry is committed to avoiding or mitigation any potential effects on vegetation. | Acknowledged and addressed in Application | Ongoing consultation and implementation of mitigation measures in Section 4.7.4 (Vegetation Mitigation Measures) |
| Invasive plant species and proposed plans to manage presence during construction | Mitigation and management of invasive species are presented in Section 4.7 of the Application. The Ministry will develop and implement an Invasive Species Management Plan as part of the Construction Environmental Management Plan. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.7.4 (Vegetation Mitigation Measures) of the Application |
| Culturally significant plants should be used in planting plans | Planting plans will be developed during later stages of Project planning and design. Opportunities for inclusion of culturally significant plants in in planting plans will be considered at that time. The Ministry will consult Musqueam on the development of these plans. | Addressed | The Ministry will develop planting plans with consultation from Musqueam |

4.8 TERRESTRIAL WILDLIFE

The Highway 99 corridor is a highly developed area and terrestrial wildlife has generally adapted to this current condition. Terrestrial wildlife along Highway 99 consists primarily of raptors, riverine birds, and small mammals. Barn owl foraging habitat has been identified along vegetated sections of Highway 99 and barn/cliff swallow nesting has been noted under the Deas Slough Bridge. No Pacific water shrew occurrence, and limited habitat potential, was identified within or adjacent to the Project alignment.

Effects

- A negligible effect on the availability of terrestrial wildlife resources for traditional use has been determined.
- A negligible effect on quality of terrestrial wildlife resources for traditional use has been determined.
- A negligible effect on quality of experience tied to the traditional use of terrestrial wildlife resources has been determined.

Mitigation

- Minimize potential effects through Project design.
- Adhere to terrestrial vegetation and wildlife management best practices such as spatial and temporal avoidance, pre-construction surveys and nest survey protocols, wildlife salvage and translocation, flagging and management of sensitive areas, and timing window restrictions.
- Habitat enhancement and offsetting.

Residual & Cumulative Effects

- There is a low, short-term probability of barn swallow habitat loss during the construction period. The new bridge will provide new nesting opportunities for barn swallows.
- There is a low, long-term probability of barn owl mortality.
- No significant Project-related residual or cumulative effects on terrestrial wildlife are expected.

| Protection of Musqueam’s Aboriginal Interests – availability, quality, and experience tied to traditional use of terrestrial wildlife resources for traditional purposes. | The Ministry acknowledges the Sparrow decision of May 1990 and Musqueam’s established right to fish for food, social and ceremonial purposes in the area of Canoe Pass on the South Arm of the Fraser River. The Ministry is committed to avoiding or mitigation any potential effects on terrestrial wildlife. | Acknowledged and addressed in Application | Ongoing consultation and implementation of mitigation measures in Section 4.8.4 (Terrestrial Wildlife Mitigation Measures) of the Application |

| Issue | Proponent Response/Action | Status | Next Steps by Proponent |
|--|--|--------------------------|---|
| Potential light effects on wildlife | The Ministry understands that Musqueam is concerned with the potential effects of light on wildlife. Lighting design will address safety requirements while still adhering to best management practices to minimize sensory disturbance to terrestrial wildlife. | Addressed in Application | Implementation of mitigation measures outlined in Sections 4.8.4 (Terrestrial Wildlife Mitigation Measures) and 4.10 (Atmospheric Noise) of the Application |
| Potential noise effects on wildlife | The Ministry understands that Musqueam is concerned with the potential effects of noise on wildlife. Construction best practices, including flagging of sensitive wildlife habitat and adhering to least-risk timing windows will ensure construction-related effects on wildlife and wildlife habitat are effectively addressed. | Addressed in Application | Implementation of mitigation measures outlined in Sections 4.8.4 (Terrestrial Wildlife Mitigation Measures) and 4.10 (Atmospheric Noise) of the Application |
| Potential effects of the bridge structure on species such as mammals, waterfowl and migratory birds, particular concern for the importance of protecting eagles. | The Ministry understands that Musqueam is concerned with the potential effects of the new bridge structure on species such as mammals, waterfowl, bats, eagles and migratory birds. Installation of flight deflectors such as hedgerows at appropriate locations along the highlight will mitigate potential Project-related increase in traffic collision risk. | Addressed in Application | Implementation of mitigation measures outlined in Section 4.8.4 (Terrestrial Wildlife Mitigation Measures) of the Application |

4.9 AIR QUALITY

Ambient air quality in the vicinity of the Highway 99 corridor has improved in recent years and will continue to improve with or without the Project. These projected future improvements are partly linked to reductions in emissions from vehicles as new emission control technologies are phased in.

Project-related reduction in idling due to congestion, and consequent reduction in emissions, is expected to result in further improvement in air quality. Anticipated Project-related improvements by 2031 include a 35% reduction in particulate matter emissions, as compared with a 14% reduction without the Project; a 47% reduction in volatile organic compound emissions, as compared with a 40% reduction without the Project; and no exceedances of the current most stringent air quality objectives for specific air contaminants, as compared with two predicted exceedances without the Project.
